**Abstract:**

The purpose of this study is to systematically review the city branding literature to provide an explicated and organized view and highlight further research opportunities. In that sense, the articles published on “city branding” and “city marketing” between 1988 and 2014 were explored via content analysis. The analysis of 146 articles suggests that there is a growing interest from different disciplines for city branding as a research domain. Therefore, it is concluded that, city branding is a multi-disciplinary area. There is a wide array of journals that are interested in and published articles on city branding. However, especially, the domain-specific journals contributed most that research area to develop. It was found that that 102 different cities from 38 different nations are studied and comparison among the cities are highly common. Most of the studies are research based and qualitative methods and case study approach are commonly used. However, there is a general tendency to describe the data but not interpret the relations between the concepts and theories. Therefore the knowledge is idiographic. Even if there is a western domination, the worldwide geographical coverage is

increasing. It was surprising to find that, mostly, the citizens/residents are searched as stakeholders and there is a few studies searching the views of visitors/tourists. The usage of multi-methods and inductive approach will enrich the city branding literature, by doing so, domain specific models and strategies can be developed rather than using the strategies developed within the marketing management..

# THE DEVELOPMENT AND CHANGE IN CITY BRANDING: A CONTENT ANALYSIS OF THE LITERATURE

## 1. Introduction and Background

In the last three decades, economic globalization and the free capital flows have increased competition between locations<sup>1</sup>. City branding, as a research domain attracts an increasing number of researchers from different disciplines and practitioners<sup>2</sup>. Branding gives an added value that is essential to the target groups. A brand is defined as “a name, a term, a sign, a symbol, a design, or a combination of some of the foregoing that identifies the goods and services of a seller or group of sellers and differentiates them from those of their competitors”<sup>3</sup>.

The main premise of city branding is to make the cities attractive to the visitor and investors, thus to improve local and national economy<sup>4</sup>. At this sense, city branding is defined as “the use of various marketing practices has become a popular way to promote a place’s attractiveness for business, tourists, residents and students”<sup>5</sup>. It is not only used for gaining competitive advantage but also for increasing inward investment and tourism, and achieving community development<sup>6</sup>. Cities are the multinationals of the 21st century<sup>7</sup>.

The early examples of place management are the promotional activities undertaken by public authorities. However, today, there is a conscious application of marketing approaches by public planning agencies. The principles of marketing and branding are explored not just as an additional instrument but as a philosophy of place management<sup>8</sup>. But the developments within the marketing discipline make a distance from general marketing to place, and thus scholars attempt to convert recent marketing theories and concepts to the place marketing literature, i.e. corporate branding<sup>9</sup>, stakeholder theory<sup>10</sup>, branding<sup>11</sup>, brand equity<sup>12</sup>, brand personality<sup>13</sup>.

<sup>7</sup> Borja and Castells, 1997

<sup>8</sup> Kavaratzis, 2004

<sup>9</sup> Kavaratzis, 2004

Additionally, place marketing, and place branding is one of the multi-disciplinary areas in which several disciplines make contributions such as marketing theories, public relations, international relations, public administration, public diplomacy, communication, geography and tourism<sup>14</sup>. In recent years, the growth of the field has intensified<sup>15</sup>. The first journals dedicated to the field are *Place Branding and Public Diplomacy* (2004) and *Place Management and Development* (2008). It is reasonable to assume the direct effect of the journals on the research domain<sup>16</sup>. In spite of the increasing interest, there is not a consensus on the terminology and the definitions<sup>17</sup> and low levels of cross-referencing<sup>18</sup>. That makes it important to explore the development and change in the literature in order to put forward a clear picture that will provide a common ground for the future improvements.

On the other hand, urban branding is in no circumstances has been in the agenda of planners over many decades. From the time on the middle nineteenth century, cities have addressed marketing efforts on residents and economic sectors instead of tourists. Long since, city marketing is accepted to be referred to place promotion initially. Since the mid-1980s, however, local authorities started to use city marketing as part of their urban development policies. At the moment, local authorities see the attraction of new business activities and residents as top priorities<sup>19</sup>.

The purpose of this study is to systematically review the city branding literature via content analysis in order to provide an explicated and organized view. This study aims to review the articles published on “city branding” and “city marketing” between 1988 and 2014 (January to mid February).

## 2. Research Methodology

In the first stage of data identification, three databases- ABI/Proquest Global, Emerald, Scencedirect were searched by using the “city branding” and “city marketing” keywords. As a result 973 articles were reached.

In the second stage the articles in the peer-reviwed journals were chosen, studies focused on geographical entities other than cities (such as destination, country, nation, town, urban marketing/branding), books, research published in edited books and conference proceedings, and editorials were excluded. Also the duplicated articles within the databases were deleted. As a result final sample size is defined as 146 articles. Then a code scheme is developed in relation with the literature<sup>20</sup>. The codes are given in Table 1.

**Table 1: Code scheme used in the content analysis**

### ***Publications and the diversity within the literature***

The city branding is a multi-disciplinary research domain. The diversity within the related literature is defined as the main characteristics of the mentioned research domain. That finding confirms the previous research (Lucarelli and Berg, 2011), and also puts forward the growing interest of different disciplines to the area. Table 2 displays the journals and the number of articles. There are 53 different academic journals from four different disciplines- namely tourism, marketing, city planning, and geography- published 146 articles on city branding. Three journals- *Cities*, *Place Branding and Public Diplomacy*, and *Journal of Place Management and Development*, are more domain-specific and approximately 43% of the articles are published within.

In the study, the period between 1998-2014 is analyzed. Figure 1 displays the number of articles according to years of publication and it is concluded that, there is a growing interest especially since 2010. The year 2014 refers to only January and mid February.

Figure 1: The Number of Articles According to The Years of Publication

### ***Methodologies used***

In sum, most of the studies are (92 out of 146) research paper whilst the others are conceptual/theoretical papers. Within these research papers, qualitative methods (46%) are much more used than the quantitative methods (23%). Only 17 articles (out of 146 articles) applied multi-methods. Case study (32 out of 67 qualitative studies) is the commonly evaluated qualitative method. The most popular data collection method is the usage of secondary sources such as statistics, documents and other researches. Interviews with various groups are the secondly most preferred data collection methods. In order to ensure the requirement various groups are used such as households, individuals, students, tourists, professionals. One of the most outstanding issues is that the usage of digital platforms as data collection technique is getting more popularity by years and in means of number as well.

Table 3: Methods Used

<b>Methods used</b>	<b>Frequency</b>	<b>%</b>
Quantitative	33	23
Multimethods	17	12
Qualitative	67	46
Theoretical (literature, conceptual)	29	20

In the light of the given research, it is understood that in some of the articles (75 out of 146) a specific time-frame is studied and mentioned. Some of them studied a single year, whilst some of them studied periods (Table 3).

### ***Empirical Foundation***

Regarding the cities studied in the city branding literature, it was found that more than 120 different cities from 38 different nations are studied. Most of the studies prefer to focus not directly just one city but to compare cities. A considerable part of the comparisons are done in between cross-national terms. The papers concentrating solely one city are linked the subject to a significant event such as expo, Olympics etc. Except the outstanding leader 8 cities, Berlin, Amsterdam, Birmingham, Bradford, Manchester, Shanghai, London and New York respectively, the rest of the studies profile in a dispersed formation around the all over world cities. Due to the fact, focusing on the cities do not let the literature analysis to go further as much as focusing on the nations does. Within the same way of thinking when the

nations are evaluated it is observed that the United Kingdom (20 articles), China (14 articles), Netherland (10 articles), United States of America (10 articles) and Australia (8 articles) dominates the top five nations studied- given in Table 4 in details. It is concluded that there is a growing interest to the city branding not only in Europe but in other continents as well. But the leading countries are the ones which are the first world countries within high ranked global cities.

Table 4: The Nations Studied

<b>Name of country</b>	<b>Frequency</b>	<b>%</b>	<b>Name of country</b>	<b>Frequency</b>	<b>%</b>
UK	20	13	Hungary	1	1
China	14	9	Israel	1	1

Malaysia	2	1	Swiss	1	1
Argentina	1	1	Taiwan	1	1
Czech Rep.	1	1	United Arabic E.	1	1
Finland	1	1	Colombia	1	1

The documents (45%) are the most used sample units in the city branding research domain. The other sample units are displayed in Table 6 in details. It was surprising to find that, even the visitors/tourists forms an important part of the stakeholders, only seven studies conducts a research on visitors' and tourists' views. Mostly, the citizens/residents (23 articles) are searched as stakeholders. One emerging point to be mentioned is that digital platforms achieve increasing ratio while compared with traditional sources.

## DISCUSSION AND CONCLUSION

The aim of this present study is to explore the city branding literature via content analysis in order to provide an explicated and organized view of the literature, and highlight further research opportunities. The analysis of 146 articles published between 1988-2014 suggests that there is a growing interest for city branding as a research domain from different disciplines- namely tourism, marketing, city planning, and geography. There is a wide array of journals that are interested in and published articles on city branding. However, especially, the domain-specific journals- *Cities*, *Place Branding and Public Diplomacy*, and *Journal of Place Management and Development*- contributed most that research area to develop.

As Gertner (2011) concluded for place marketing and place branding literature, this study also confirms that there is not a “robust theory under construction” in the city branding literature. Nevertheless, in the literature of city branding, most of the studies are research based and the qualitative methods are the most used techniques. Qualitative methods are inductive by nature and can be used to build theories. Inductive analysis requires detailed readings of raw data to derive concepts, themes, or a model through interpretations<sup>21</sup>. “The researcher begins with an area of study and allows the theory to emerge from the data”<sup>22</sup>. The research papers analyzed in this study are factual and descriptive and do not generate any propositions or testable models. The purposes for using an inductive approach are to “ (a) condense rawtextual data into a brief, summary format; (b) establish clear links between the evaluation or research

<sup>21</sup>Thomas, 2006

<sup>22</sup>Strauss and Corbin 1998

objectives and the summary findings derived from the rawdata; and (c) develop a framework of the underlying structure of experiences or processes that are evident in the raw data”<sup>23</sup>.

In general case study is used in the research domain. Case study is a qualitative research approach used within a large number of disciplines, such as sociology, anthropology, history, psychology, law, medicine, and education, political science, economics, urban planning, public administration, public policy, social work and management<sup>24</sup>. Three important features of case study makes it a suitable technique for these different disciplines: (1) data is collected from a natural setting and therefore can be used to generate theories from practice; (2) the researcher can answer “how” and “why” questions, (3) it is an appropriate way to research an area in which few previous studies have been carried out (Halaweh, 2012).

Case studies construct an understanding about the investigated phenomenon and- adjacent to a constructivism position- reveal new concepts and new relations or modify existent concepts/theories (Grunbaum, 2007). However, in the city branding literature, there is a general tendency to specify the cases therefore the knowledge is idiographic. The case study findings just present a picture of the phenomenon- such as branding applications, events (expo, Olympics etc), websites- but not interpret the relations between the concepts and theories. That is also criticized within the literature. Kavaratzis (2007) concluded that there still remains many issues on city marketing applications and there is a need for further theoretical development and practical clarification. Anholt (2005) highlighted that there is limited clarity and agreement about terminology and definitions on city branding. In fact, “there appears to be more agreement over what city branding and place branding is not, than over what it is”<sup>25</sup>. Gertner (2011) suggested the complexity of city branding literature. In general, the concepts and theories developed within and derived from the marketing discipline<sup>26</sup>. Whilst city branding should serve the stakeholders having different demands, it should also pursue economic development. In other words, city branding has symbolic, social and economic impacts<sup>27</sup>. That creates the need to develop a framework describing and clarifying the processes involved in city branding<sup>28</sup>. Therefore, the literature requires studies that rely on inductive approaches and multi-methods to define and analyze the relations among the factors embedded in city branding.

---

<sup>23</sup> Thomas 2006

<sup>24</sup> Grunbaum, 2007

<sup>25</sup> Björner, 2013

<sup>26</sup> Kavaratzis, 2005

<sup>27</sup> Lucerelli, 2012

<sup>28</sup> Kavaratzis, 2005

Empirically, there is a raise of interest to city branding not only in Europe but in other continents also. It was found that that 102 different cities from 38 different nations are studied. United Kingdom (20 articles), China (14 articles), Netherland (10 articles), United States of America (10 articles) and Australia (8 articles) are the top five nations subjected to city branding studies. Even if there is a western domination, the worldwide geographical coverage is increasing. There is also a comparative approach in the studies.

The documents are the most used sample units in the city branding research domain. The documents are supported by in-depth interviews with the participants who have active roles in city branding. Data triangulation is important in case study approach since it provides thick descriptions. However, as previously mentioned, the studies just give findings from multiple resources descriptively but not make interpretations. It was surprising to find that, mostly, the citizens/residents are searched as stakeholders and there is a few studies searching the views of visitors/tourists. It is believed that using multi-methods and searching the viewpoints of different stakeholders can enrich the city branding literature.
