## PREFACE

The \$PEQUV-File is based on the Cross-National Equivalent File (CNEF) with extended income information for the SOEP. This file comprises not only the aggregated income figures provided in the CNEF but also further single income components.

The CNEF is a joint effort of researchers and staff affiliated with Cornell University, the DIW Berlin, the University of Essex, and Statistics Canada funded by the National Institute on Aging and by the DIW Berlin. For extensive documentation of the CNEF cf.

<http://www.human.cornell.edu/pam/SOEP/equivfil.cfm> or: Burkhauser, R.V, Butrica, B.A., Daly, M.C. and Lillard, D.R. (2001): The Cross-National Equivalent File: A product of cross-national research. In: Becker, I., Notburga, O and Rolf, G. (Eds.) Soziale Sicherung in einer dynamischen Gesellschaft (Social Insurance in a Dynamic Society). Festschrift für Richard Hauser zum 65. Geburtstag (Papers in Honor of the 65th Birthday of Richard Hauser). Campus, Frankfurt/New York.

### General notes:

- In contrast to the original CNEF-data which is based on the 95% scientific use file of SOEP, the \$PEQUIV-files include the full 100%-sample.
- The 2005 release of the \$PEQUIV-files has been updated to include the 2004 (wave U) SOEP data..
- Population for \$PEQUIV is made up by all members of households who were successfully interviewed (i.e., persons with \$NETTO-codes 1 to 5 in the file PPFAD and \$HNETTO-code 1 in the file HPFAD).
- For longitudinal consistency, all \$PEQUIV income variables are consistently expressed in EURO (1 Euro = 1,95583 DM) independent of the currency used in the underlying survey instruments.
- Income data is missing for Sample C in 1990 and 1991 (first 2 waves of East German sample).
- Information for the SOEP sub-sample G ("High Income") has been incorporated for the survey years 2002-2004. However, the standard weighting schemes (i.e., variables w11101\$\$ - w11111\$\$) for these waves are based on SOEP sub-samples A-F only in order to maintain a harmonized time-series.
- The Consumer Price Index (Y11101\$\$) has been updated to the reference year 2000. Former differences in the Purchasing Power parity between East and West Germany are considered as well. Thus the variable Y11104\$\$ (Purchasing Power Parity for East Germany) has been dropped.

An important distinction from the original CNEF data, is that the \$PEQUIV-files have been extended to also cover all single income components considered in the aggregated annual income figures of the CNEF. In principle, these single income components correspond to the originally surveyed information (which is stored in the \$P, \$PKAL and \$H files, respectively) with some important amendments:

- Income variables are harmonized with respect to the periodicity, i.e. they give annual income (as of the previous calendar year). Components which are asked at monthly level have been multiplied by the number of months with receipt of the respective income (eventually, this implies imputation of missing number of months in the originally surveyed data as well as a longitudinally verified correction of implausible values).
- Any missing income information due to item-non response has been imputed according to the longitudinal and cross-sectional imputation procedures described in: Grabka, M.M. and Frick, J.R. (2003): Imputation of Item-Non-Response on Income Questions in the SOEP 1984–2002. DIW Research Note No. 29, Berlin October 2003.  
([http://www.diw.de/deutsch/produkte/publikationen/materialien/docs/papers/diw\\_rn03-10-29.pdf](http://www.diw.de/deutsch/produkte/publikationen/materialien/docs/papers/diw_rn03-10-29.pdf)).  
See also: Frick, J.R. and Grabka, M.M. (2005): Item-Non-Response on Income Questions in Panel surveys: Incidence, Imputation and the Impact on the Income Distribution. Allgemeines Statistisches Archiv (AStA) 89, 49-61.
- An imputation flag for each of these single income components has been specified. These flags take a value of 1 if item-non-response on the underlying income variable has been imputed and 0 otherwise.

Variable naming conventions for the single income components: (see variable list on page 4):

- Variable names are longitudinally consistent using a two-digit suffix indicating the survey year (wave A = 84, wave B = 85, ..., wave U = 04).
- Variable names related to income components at the individual level start with the prefix “I”, e.g., Christmas bonus is given in variable IXMAS\$\$.
- The prefix “F” indicates the imputation flag, e.g. the flag variable for rental income (RENTY\$\$) is given by FRENTY\$\$.

For further information please contact: Markus M. Grabka ([mgrabka@diw.de](mailto:mgrabka@diw.de)).

## Variables in the cross-sectional SPEQUIV Files 1984-2004

Label	Variable List	Page
<b>Identifiers:</b>		
Unique Person Number	X11101LL	9
Household Identification Number	X1110284 - X1110204	10
Individual in Household at Survey	X1110384 - X1110304	11
Sub-sample Identifier	X11104LL	12
Person in Household Interviewed	X1110584 - X1110504	13
<b>Demographics :</b>		
Age of Individual	D1110184 - D1110104	14
Sex of Individual	D11102LL	15
Race of Household Head	D1110384 - D1110304	16
Marital Status of Individual	D1110484 - D1110404	17
Relationship to Household Head	D1110584 - D1110504	18
Number of Persons in Household	D1110684 - D1110604	19
Number of Children in Household	D1110784 - D1110704	20
Education With Respect to High School	D1110884 - D1110804	21
Number of Years of Education	D1110984 - D1110004	22
Race of Individual	D11112LL	23
<b>Employment:</b>		
Annual Work Hours of Individual	E1110184 - E1110104	24
Impute Annual Work Hours of Individual	E1120184 - E1120104	25
Employment Status of Individual	E1110284 - E1110204	26
Employment Level of Individual	E1110384 - E1110304	27
Primary Activity of Individual	E1110484 - E1110404	28
Occupation of Individual	E1110584 - E1110504	29
1 Digit Industry Code of Individual	E1110684 - E1110604	31
2 Digit Industry Code of Individual	E1110784 - E1110704	32
<b>Equivalence scale inputs:</b>		
Number HH members age 0-14	H1110184 - H1110104	33
Number HH members age 15-18	H1110284 - H1110204	33
Number HH members age 0-1	H1110384 - H1110304	33
Number HH members age 2-4	H1110484 - H1110404	33
Number HH members age 5-7	H1110584 - H1110504	33
Number HH members age 8-10	H1110684 - H1110604	33
Number HH members age 11-12	H1110784 - H1110704	33
Number HH members age 13-15	H1110884 - H1110804	33
Number HH members age 16-18	H1110984 - H1110904	33
Number HH members age 19+ or 16-18 and indep.	H1111084 - H1111004	33

## Using the \$PEQUIV File Codebook

<b>Variable Name</b>	I1111084 - I1111004	<i>Name of Variable in the \$PEQUIV-File</i>
<b>Variable Label</b>	Labor Earnings of Individual	
<b>Unit of Observation</b>	Individual / Household / Year	
<b>Period</b>	Annual	<i>Periodicity</i>
		<i>Description of Variable Content</i>
<b>Description</b>	This variable represents the labor earnings of each individual in the household.	
<b>Method</b>	<i>Description of Variable Creation</i>	
	Labor earnings include wages and salary from all employment including training, primary and secondary jobs, and self-employment, plus income from bonuses, overtime, and profit-sharing.	
	Specifically labor earnings is the sum of income from primary job, secondary job, self-employment, 13th month pay, 14th month pay, Christmas bonus pay, holiday bonus pay, miscellaneous bonus pay, and profit-sharing income.	
<b>Format</b>	Not formatted. This variable is in current year EURO.	<i>Variable Format in the \$PEQUIV-File</i>
<b>Algorithm</b>		
<b>1984-2004 algorithm:</b>	$I11110\$\$ = IJOB1\$\$ + IJOB2\$\$ + ISELF\$\$ + IMILT\$\$ + I13LY\$\$ + I14LY\$\$ + IXMA\$\$ + IHOLY\$\$ + IGRAY\$\$ + IOTHY\$\$ \quad (\$\$=84-04)$	

<b>Variable Name</b>	X11101LL
<b>Variable Label</b>	Unique Person Number
<b>Unit of Observation</b>	Individual
<b>Description</b>	This variable provides unique identification for each individual ever surveyed in the SOEP.
<b>Method</b>	Transcribed variable.
<b>Format</b>	N/A
	The original survey variables provided below can be found in the file PPFAD.
<b>Algorithm</b>	
<b>1984 – 2004 algorithm:</b>	X11101LL = PERSNR

<b>Variable Name</b>	X1110284 - X1110204
<b>Variable Label</b>	Household Identification Number
<b>Unit of Observation</b>	Household
<b>Description</b>	This variable links individuals to the households they were living in at the time of the interview. The SOEP provides yearly household identification numbers.
<b>Method</b>	Transcribed variable.
<b>Format:</b>	N/A
	The original survey variables provided below can be found in the files HPFAD.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	X11102\$\$ = Yhhnr (\$\$=84-04, Y=A-U)

<b>Variable Name</b>	X1110384 - X1110304
<b>Variable Label</b>	Individual in Household at Survey
<b>Unit of Observation</b>	Individual
<b>Description</b>	Indicates whether an individual was living in the household at the time of the interview regardless of whether the individual responded to interview questions.
<b>Method</b>	Individuals who are members of a surveyed household are given a 1. Individuals who moved out of a SOEP household, died, or went abroad are given a 0.
<b>Format:</b>	0 = No 1 = Yes
	The original survey variables provided below can be found in the file HPFAD.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	If Ynetto = 1, 2, 3, 4, 5 and Yhnetto=1 then X11103\$\$ = 1 (Y=A-U, \$\$=84-04) else X11103\$\$ = 0

<b>Variable Name</b>	X11104LL
<b>Variable Label</b>	Sub-sample Identifier
<b>Unit of Observation</b>	Individual
<b>Description</b>	This variable indicates from which sub sample an individual in the SOEP drawn.
<b>Method</b>	<p>The SOEP contains seven different samples.</p> <ol style="list-style-type: none"> <li>1) Sample A consists of the residents of West Germany originally surveyed in 1984.</li> <li>2) Sample B consists of a sample of foreign guest-workers of Italian, Spanish, Turkish, Yugoslavian, and Greek nationality also surveyed in 1984. The 1,400 foreign households in this original oversample were selected based on the nationality of the head of household. Foreigners who are not Italian, Spanish, Turkish, Yugoslavian, or Greek are included with the Germans in Sample A.</li> <li>3) Sample C represents population of Germans residing in the former East German states in 1990.</li> <li>4) Sample D surveyed in 1994/95 represents the population of households with at least household member who immigrated to Germany after 1984.</li> <li>5) Sample E is a supplemental random sample that represents the population of Germany in 1998.</li> <li>6) Sample F is an additional supplemental random sample that represents the population of Germany in 2000.</li> <li>7) Sample G surveyed in 2002 is the so-called “high-income sample”. Sampling criteria was a monthly disposable household income of more than 7.500 DM in 2001. Sample G represents about 7,3% individuals in private households with the highest income.</li> </ol>
<b>Format</b>	<p>21 = Sample A  22 = Sample B  23 = Sample C  24 = Sample D  25 = Sample E  26 = Sample F  27 = Sample G</p> <p>The original survey variables provided below can be found in the file PPFAD.</p>
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	<pre> if psample = 1 then X11104LL = 21 else if psample = 2 then X11104LL = 22 else if psample = 3 then X11104LL = 23 else if psample = 4 then X11104LL = 24 else if psample = 5 then X11104LL = 25 else if psample = 6 then X11104LL = 26 else if psample = 7 then X11104LL = 27 </pre>

<b>Variable Name</b>	X1110584 - X1110503
<b>Variable Label</b>	Indicator of Whether Person in Household was Interviewed
<b>Unit of Observation</b>	Individual
<b>Description</b>	Indicates whether an individual present in the household provided interview responses. Children in the household are counted as interviewed persons.
<b>Method</b>	Individuals in the household 16 years of age and older who are members of a surveyed household reject to give an interview are given a 0.
<b>Format</b>	0 = Didn't provide information 1 = Provided information
<b>Algorithm</b>	The original survey variables provided below can be found in the file PPFAD. This algorithm omits individuals with survey non-responses.
<b>1984-2004 algorithm:</b>	if Ynetto in (1,2,5) then X11105\$\$ = 1; (Y=A-U, \$\$=84-04) else X11105\$\$ = 0;

<b>Variable Name</b>	D1110184 - D1110104
<b>Variable Label</b>	Age of Individual
<b>Unit of Observation</b>	Individual
<b>Description</b>	Indicates the age of the individual in years.
<b>Method</b>	The SOEP records the birth date (GEBJAHR) of each individual. The current age of an individual is created by subtracting the year of birth from the current year.
<b>Format</b>	<p>-1 = Item non-response 0 = Newborn up to first birthday</p> <p>The value of this variable ranges from 0 to 105.</p> <p>The original survey variables provided below can be found in the file PPFAD. This algorithm omits individuals with survey non-responses.</p>
<b>Algorithm</b>	
<b>1984-1999</b> algorithm:	D11101\$\$ = 19\$\$ - GEBJAHR (\$\$=84-99)
<b>2000-2004</b> algorithm:	D11101\$\$ = 20\$\$ - GEBJAHR (\$\$=00-04)

<b>Variable Name</b>	D11102LL
<b>Variable Label</b>	Gender of Individual
<b>Unit of Observation</b>	Individual
<b>Description</b>	Indicates the gender of the individual.
<b>Method</b>	<p>The SOEP records the gender (SEX) of each individual. This information is acquired once and is not obtained in subsequent years.</p> <p>Gender is constant through time and therefore does not have a yearly suffix. This variable is missing for the few cases where information about gender was not reported and inferences about gender could not be made.</p>
<b>Format</b>	<p>-1 = Item non-response  1 = Male  2 = Female</p> <p>The original survey variables provided below can be found in the file PPFAD. This algorithm omits individuals with survey non-responses.</p>
<b>Algorithm</b>

<b>Variable Name</b>	D1110384 - D1110304
<b>Variable Label</b>	Race of Household Head
<b>Unit of Observation</b>	Individual
<b>Description</b>	Indicates the race of the interviewed head of household.
<b>Method</b>	<p>Race is <u>not</u> available in the SOEP.</p> <p>However, to separate Germans from non-Germans use the variables about</p> <ul style="list-style-type: none"> <li>○ nationality (NATION\$\$) which can be found in the \$PGEN-files or</li> <li>○ the information about whether a person was born in Germany (GERMBORN) or</li> <li>○ the country of origin (CORIGIN) whereas both can be found in the PPFAD-file.</li> </ul>
<b>Format</b>	-1 = no information available

<b>Variable Name</b>	D1110484 - D1110404
<b>Variable Label</b>	Marital Status of Individual
<b>Unit of Observation</b>	Individual
<b>Description</b>	This variable indicates the marital status in the current survey year of all individuals in the household 16 years of age and older.
<b>Method</b>	The married category represents individuals who are legally married and individuals who are living with a partner. All other categories represent the legal status of individuals who are not living with a partner. Married non-German "guest workers" whose spouses remained in their native countries are given a code of 6 or 7 depending on their ages.
<b>Format</b>	<p>-1 = N/A – Child / Item non-response  1 = Married, Living with a Partner  2 = Single, not Living with a Partner  3 = Widowed, not Living with a Partner  4 = Divorced, not Living with a Partner  5 = Separated (Legally Married), not Living with a Partner  6 = Not Living with a Partner (Individuals age 18 and older)  7 = Not Living with a Partner (Individuals under age 18)</p> <p>The original survey variables provided below can be found in the file _PGEN. This algorithm omits individuals with survey non-responses.</p> <p>Equivalent Data File Variable Definitions: D11101__ = Age of Individual</p>
<b>Algorithm</b>

<b>Variable Name</b>	D1110584 - D1110504
<b>Variable Label</b>	Relationship to Household Head
<b>Unit of Observation</b>	Individual
<b>Description</b>	This variable indicates the individual's relationship to the current survey year's head of household.
<b>Method</b>	The relation to head variable is created by collapsing the SOEP relationship to head variable into 5 categories. The original variable has 12 categories. These categories include spouses, life-partners, children, foster children, siblings, parents, in-laws, grandchildren, other relatives, and unrelated persons.
<b>Format</b>	<p>-1 = Item non-response  1 = Head  2 = Partner  3 = Child  4 = Relative  5 = Non-relative</p> <p>The original survey variables provided below can be found in the file _PBRUTTO. This algorithm omits individuals with survey non-responses.</p>
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	<pre> if Ystell = 0 then D11105\$\$ = 1                (Y=A-U, \$\$=84-04) else if Ystell = 1 or 2 then D11105\$\$ = 2 else if Ystell = 3 or 4 then D11105\$\$ = 3 else if Ystell = 5, 6, 7, 8, 9 or 10 then D11105\$\$ = 4 else if Ystell = 11 then D11105\$\$ = 5 else D11104\$\$ = -1 </pre>

<b>Variable Name</b>	D1110684 - D1110604
<b>Variable Label</b>	Number of Persons in Household
<b>Unit of Observation</b>	Household
<b>Description</b>	Indicates the number of persons in the household at the time of the interview.
<b>Method</b>	This information is obtained from the household head or another household member who knows about the household's composition.
<b>Format</b>	-1 = Item non-response The value of this variable ranges from 1 to 17.  The original survey variables provided below can be found in the file _HBRUTTO. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	D11106\$\$ = YHHGR (Y=A-U, \$\$=84-04)

<b>Variable Name</b>	D1110784 - D1110704
<b>Variable Label</b>	Number of Children in Household
<b>Unit of Observation</b>	Household
<b>Description</b>	Indicates the number of persons in the household under age 18 at the time of the interview.
<b>Method</b>	This variable is created by computing the number of individuals in the household under the age of 18.
<b>Format</b>	<p>-1 = Item non-response</p> <p>The value of this variable ranges from 0 to 10.</p> <p>The original survey variables provided below can be found in the file PPFAD. <b>Variable Name</b>	D1110984 - D1110904
<b>Variable Label</b>	Number of Years of Education
<b>Unit of Observation</b>	Individual
<b>Description</b>	This variable indicates the number of years of education completed at the time survey for all individuals in the household 16 years of age and older.
<b>Method</b>	Individuals with a school leaving degree are assigned a minimum of between 9 and 12 years of education. Individuals with a vocational degree are assigned an additional 2 to 3.5 years of education. Individuals who attended a technical college are assigned an additional 4 years of education. If an individual received a vocational college degree or attended a university outside of the FRG then the individual is assigned a total of 18 or 19 years of education. For more information about the construction of this variable see Couch, 1994.
<b>Format</b>	-1 = N/A – Child / Item non-response The value of this variable ranges from 7 to 18.  The original survey variables provided below can be found in the file _PGEN. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	if Ybilzeit=.B then D11109\$\$=0; (Y=A-U, \$\$=84-04) else D11109\$\$ = Ybilzeit; else D11109\$\$=-1;

<b>Variable Name</b>	D11112LL
<b>Variable Label</b>	Race of individual
<b>Unit of Observation</b>	Individual
<b>Description</b>	Indicates the race of each individual in the household.
<b>Method</b>	Race is <u>not</u> available in the SOEP.

<b>Variable Name</b>	E1110180 - E1110104
<b>Variable Label</b>	Annual Work Hours of Individual
<b>Unit of Observation</b>	Individual
<b>Description</b>	This variable reports annual hours worked in the previous year for all individuals in the household 16 years of age and older.
<b>Method</b>	<p>There is no direct report of annual work hours in the SOEP. This variable was constructed using information on employment status in the survey year, average number of hours worked per week, and the number of months worked in the previous year (reported in the activity calendar).</p> <p>Annual hours worked in the previous year is calculated by adding together the estimated annual hours of full-time, part-time (including marginal employed), vocational training and short-time work. Annual hours of work in each of these four states is calculated by multiplying the average number of hours worked per week by the number of months worked in each of these three states for the previous year and by 4.33 (the average number of weeks per month). No correction for vacation or diseases has been made.</p> <p>When the state indicated in the employment status variable matches the state recorded in the monthly calendar file we use the reported average number of hours worked per week as our measure of weekly hours worked.</p> <p>When the state indicated in the employment status variable does <u>not</u> match the state recorded in the monthly calendar file we use an imputed weekly hours value as our measure of weekly hours worked. The imputed values are based on a regression of reported log average weekly work hours separately for full-time, part-time, marginal or irregular, short-time and currently not employed individuals. Covariates are age, age squared, sex, dummy variable for children in the household, marital status, region (east or west Germany) and two education dummy variables.</p> <p>There are still some cases where no annual work hours but individual labor income (I11110\$\$) can be observed. This finding can be explained by e.g. individuals who took maternity leave or did National Service.</p>
<b>Format</b>	<p>-1 = N/A - Child  0 = Not employed in the previous year  The value of this variable ranges from 1 to 7457.</p> <p>The original survey variables provided below can be found in the file __P. Variable Name	E1110584 - E1110504			
Variable Label	Occupation of Individual			
Unit of Observation	Individual			
Description	This variable indicates occupation at the time of the survey for all individuals in the household 16 years of age and older.			
Method	This variable is based on the individual’s self-reported occupation at the time of the interview given by ISCO-88 occupation code (IS88\$\$). Occupation is coded as not applicable for individuals who were not working at the time of the interview. To harmonize the occupation of individual across countries we recalibrate the ISCO-88 code into the former ISCO68-code.

<b>Variable Name</b>	E1110684 - E1110604
<b>Variable Label</b>	1 Digit Industry of Individual
<b>Unit of Observation</b>	Individual
<b>Description</b>	This variable indicates industry in which each individual in the household 16 years of age and older is employed at the time of the survey.
<b>Method</b>	This variable is based on the individual's self-reported industry of occupation at the time of the interview. This variable is created by collapsing the SOEP industry variable into 10 broad categories. Industry is coded as not applicable for individuals who were not working at the time of the interview.
<b>Format</b>	<p>-1 = N/A – Child / Item Non-response  0 = Not Applicable  1 = Agriculture  2 = Energy  3 = Mining  4 = Manufacturing  5 = Construction  6 = Trade  7 = Transport  8 = Bank/Insurance  9 = Services</p> <p>The original survey variables provided below (NACE\$\$) can be found in the file _PGEN. <b>Variable Names</b>	H1111284 - H1111204
<b>Variable Label</b>	Indicator – Wife / spouse is in Household
<b>Unit of Observation</b>	Household
<b>Description</b>	These variables indicate the presence of a “wife or spouse” in the household.
<b>Method</b>	These variables are simple indicator variables that a person who is a “wife/spouse” is present in a given year.
<b>Format</b>	0 = Not present 1 = Present  The variables provided below can be found in the \$PEQUIV files. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	if X11103\$\$=1 then do; <span style="float: right;">(\$\$=84-04)</span> H11112\$\$=0; if D11105\$\$=2 then H11112\$\$=1; end;

The following algorithms allow users to take Equivalent file variables and construct equivalence weights commonly used in various countries. To obtain equivalent household income, divide the equivalence scale weight into the household income variable. Here we present three typical example of equivalence weights:

<b>Equivalence scale</b>	<b>OECD Equivalence Weights</b> (referred to below as W11114\$\$(	(\$\$=84-04)

--------------------------	--	--------------

<b>Unit of Observation</b>	Household
----------------------------	-----------

<b>Description</b>	Household equivalence weight based upon a single international scale.
--------------------	---

<b>Method</b>	The weight is based upon a scale developed in Buhmann et al. (1988). The scale is characterized by the following equation: $EI = D/S^e$
---------------	---

Where equivalent income (EI) equals total disposable household income (D) divided by household size (S) raised to the power (e). The parameter (e) represents the elasticity of the scale rate with respect to household size. Recent international studies on income inequality and poverty sponsored by the OECD (e.g., Forster 1990; Atkinson et al. 1994), and the Statistical Office of the European Commission (Hagenaars et al. 1994) and the Ruggles (1990) study of the United States use this type of exponential equivalence scale. We adopt a value of a equal to 0.5, which is most commonly used in international comparisons.

<b>Algorithm</b>	$W11116\$$(=D11106\$$(**0.5;$

<b>1984-2004 algorithm:</b>	$I11101\$\$ = I11103\$\$ + I11104\$\$ + I11106\$\$ + I11117\$\$ \quad (\$\$=84-04)$

<b>Variable Name</b>	I1110284 - I1110204
<b>Variable Label</b>	Household Post-Government Income
<b>Unit of Observation</b>	Household
<b>Period</b>	Annual
<b>Description</b>	This variable represents the combined income after taxes and government transfers all individuals in the household 16 years of age and older.
<b>Method</b>	<p>This variable is the sum of total family income from labor earnings, asset flows, private retirement income, private transfers, public transfers, and social security pensions minus total family taxes. Labor earnings include wages and salary from all employment including training, self-employment income, bonuses, overtime, and profit-sharing. Asset flows include income from interest, dividends, and rent. Private transfers include payments from individuals outside of the household including alimony and child support payments. Public transfers include housing allowances, child benefits, subsistence assistance from the Social Welfare Authority, special circumstances benefits from the Social Welfare Authority, government student assistance, maternity benefits, unemployment benefits, unemployment assistance, and unemployment subsistence allowance. Social security pensions include payments from old age, disability, and widowhood pension schemes. The tax burdens provided here are based upon updated and modified tax calculation routines developed by Schwarze. The tax burden includes income taxes and payroll taxes (health, unemployment, retirement insurance and nursing home insurance taxes). These routines are described in Schwarze (1995).</p> <p>Household post-government income has no negative values.</p>
<b>Format</b>	<p>The value of this variable ranges from 0 to 5.000.000. <b>Algorithm</b>	<p><b>1984-2004</b> algorithm:</p> $I11102\$\$ = I11103\$\$ + I11104\$\$ + I11106\$\$ + I11107\$\$ + I11108\$\$ + I11117\$\$ - I11109\$\$ \quad (\$\$=84-04)$

<b>Variable Name</b>	I1110384 - I1110304
<b>Variable Label</b>	Household Labor Income
<b>Unit of Observation</b>	Household
<b>Period</b>	Annual
<b>Description</b>	This variable represents the combined labor income of all individuals in the household 16 years of age and older.
<b>Method</b>	<p>Labor earnings include wages and salary from all employment including training, primary and secondary jobs, and self-employment, plus income from bonuses, over-time, and profit-sharing.</p> <p>Specifically labor earnings is the sum of income from primary job, secondary job, self-employment, service pay, 13th month pay, 14th month pay, Christmas bonus pay, holiday bonus pay, miscellaneous bonus pay, and profit-sharing income.</p>
<b>Format</b>	<p>The value of this variable ranges from 0 to 5.000.000. This variable is in current year EURO.</p> <p>This algorithm omits individuals with survey non-responses.</p> <p>Equivalent Data File Variable Definitions: I11110__ = Individual Labor Earnings</p>
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	I11103\$\$ = sum of I11110\$\$ over all individuals in the household (\$\$=84-04)

<b>Variable Name</b>	I1110484 - I1110404
<b>Variable Label</b>	Household Asset Income
<b>Unit of Observation</b>	Household
<b>Period</b>	Annual
<b>Description</b>	This variable represents the household asset income reported by the head of the household.
<b>Method</b>	<p>Asset flows include income from interest, dividends, and rent.</p> <p>After 1984 respondents who could not estimate their interest and dividend income directly were asked to select a range from a set of categories. Their choices were:</p> <ul style="list-style-type: none"> <li>under 500 DM</li> <li>500 to 2,000 DM</li> <li>2,000 to 5,000 DM</li> <li>5,000 to 10,000 DM</li> <li>10,000 DM and over</li> </ul> <p>Starting in year 2001 (wave R) an additional item was offered:</p> <ul style="list-style-type: none"> <li>10,000 to 20,000 DM</li> <li>20,000 DM and over</li> </ul> <p>Since year 2002 (wave S) all items are asked for Euro:</p> <ul style="list-style-type: none"> <li>under 250 Euro</li> <li>250 to 1,000 Euro</li> <li>1,000 to 2,500 Euro</li> <li>2,500 to 5,000 Euro</li> <li>5,000 to 10,000 Euro</li> <li>10,000 Euro and over</li> </ul> <p>These respondents are assigned an interest and dividend amount based on uniformly distributed random numbers within their income range.</p> <p>Rental income is the amount of income from rent minus any operation and maintenance costs.</p> <p>In 1991 income from rent and operation and maintenance costs were not asked. If the respondent was interviewed in 1990, 1991, and 1992 and reported having rental income or operation and maintenance costs for 1990 and 1992, the average of the 1990 and 1992 values are assigned to 1991. If the respondent was interviewed in only two of the years, one of the years being 1991, and reported having rental income or operation and maintenance costs, then rental income or operation and maintenance costs for that year are assigned to 1991.</p>
<b>Format</b>	<p>The value of this variable ranges from 0 to 5.000.000.</p> <p>This variable is in current year EURO.</p> <p>The survey variables provided below are part of the \$PEQUIV-file.</p> <p>This algorithm omits individuals with survey non-responses.</p>
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$I11104\$\$ = (RENTY\$\$ - OPERY\$\$) + DIVDY\$\$ \quad (\$\$=84-04)$

<b>Variable Name</b>	I1110584 - I1110504
<b>Variable Label</b>	Household Imputed Rental Value
<b>Unit of Observation</b>	Household
<b>Period</b>	Annual
<b>Description</b>	This variable represents the imputed rental value of owner occupied housing.
<b>Method</b>	<p>The Imputed Rent (IR) information calculated for the German SOEP data is based on the so called Opportunity Cost Approach. This approach at the micro level yields information equivalent to that given by the Market Value Approach used in National account statistics for determining IR. After generating a fictitious market rent for owner-occupiers, all owner related costs are deducted including operating and maintenance costs, interest payments on mortgages, as well as property taxes (see Yates 1994 / United Nations 1977).</p> <p>In more detail, the implementation of the opportunity cost approach is used here in the following way. Along the lines of Oaxaca (1973), we estimate an OLS (semilog) regression model of gross rent in terms of square meters (not including heating) actually paid by main tenants in privately financed housing (without social housing and households with reduced rent). Independent variables include indicators describing the condition of the house, the year of construction, size of dwelling, length of occupancy, community size and disposable income. Applying these regression coefficients to the population of owner occupiers yields an estimate of the gross value at market prices (without costs for heating and warm water). Further deducting owner-specific costs for taxation, maintenance and operating costs as well as interest on mortgages yields a net value which can be interpreted as the appropriate income advantage of owner-occupied housing. Information on interest and mortgage payments for the previous year from homeowners in SOEP serves as the basis for determining the level of interest payments. We assume an annuity with constant payments based on 7% annual interest and a 1% principal over the course of an average period of 30 years. In addition, we assume that mortgage payments begin at the same time in which the household moves into its new home. Thus, in the beginning of the repayment period interest payments clearly exceed the mortgage repayment. As times goes by, the share of the mortgage paid off increases, leaving an increasing income advantage from IR. For example an average interest burden of 3.29 DM/m<sup>2</sup> per month is used for West Germany in 1988 and rises to 5.52 DM/m<sup>2</sup> per month in 1998. The average interest burden in East Germany was slightly lower, at 4.14 DM/m<sup>2</sup> per month in 1998. In case of owner related costs exceeding the income advantage (especially at the beginning of the mortgage repayment period), IR is assigned a value of zero. For further details see: Frick and Grabka (2001) and Frick and Grabka (2003):</p>
<b>Format</b>	<p>The value of this variable ranges from 0 to 5.000.000.</p> <p>This variable is in current year EURO.</p>
<b>Algorithm</b>	N/a

<b>Variable Name</b>	I1110684 - I1110604
<b>Variable Label</b>	Household Private Transfers
<b>Unit of Observation</b>	Household
<b>Period</b>	Annual
<b>Description</b>	This variable represents the combined private transfers of all individuals in the household 16 years of age and older.
<b>Method</b>	Private transfers consists of income received from persons outside of the interviewed household. For waves A-Q this income was not specifically identified. Starting in wave R an additional question identifies alimony separately (variable \$p2o03 in SOEP file \$PKAL: \$ = R, S, ... ). The bulk of transfer is likely to consist of alimony and child support payments.
<b>Format</b>	<p>The value of this variable ranges from 0 to 5.000.000. This variable is in current year EURO.</p> <p>The survey variables provided below are part of the \$PEQUIV-file. This algorithm omits individuals with survey non-responses.</p>
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$I11106\$\$ = \text{sum of } (I11106\$\$ + I11106\$\$) \text{ over all individuals in the household}$ <p style="text-align: right;">(\$\$=84-04)</p>

<b>Variable Name</b>	I1110784 - I1110704
<b>Variable Label</b>	Household Public Transfers
<b>Unit of Observation</b>	Household
<b>Period</b>	Annual
<b>Description</b>	This variable represents the combined public transfers of all individuals in the household 16 years of age and older.
<b>Method</b>	<p>Public Transfers are the sum of individual public transfers -- student grants, maternity benefits, unemployment benefits, unemployment assistance, subsistence allowance and transition pay -- over all individuals in the household, plus household benefits -- housing allowances, child benefits, nursing care insurance, direct housing subsidy, subsistence assistance, and support for special circumstances.</p> <p>In 1984 the amount of child benefits is not asked. Child benefits for this year were imputed using information on the number of children in the household and the number of months the benefits were received.</p> <p>In 1992 through 1994 the amounts of subsistence assistance and special circumstances benefits are not asked. These values have been filled in with imputed values for total social welfare income. In 1995 through 2000 amounts of subsistence assistance and special circumstances benefits are imputed using an algorithm developed by Peter Krause (DIW) based on the benefits received in the present survey month.</p> <p>Since 1996 nursing care insurance benefits are included in the sum. In 1996 German law established direct housing subsidy payments. Starting in the 2000 survey a separate question was asked about income from this source. Direct housing subsidy payments for respondents who bought homes between 1996 and 1999 were imputed using information about the year of construction, acquisition of ownership and number of children in the household.</p>
<b>Format</b>	<p>The value of this variable ranges from 0 to 5.000.000.</p> <p>This variable is in current year EURO.</p> <p>The survey variables provided below are part of the \$PEQUIV-file.</p> <p>This algorithm omits individuals with survey non-responses.</p>

	I1111684 - I1111604	Household Federal Taxes (TAXSIM)
<b>Unit of Observation</b>	Household	
<b>Description</b>	This variable represents the combined income after taxes and government transfers, the Total Household Taxes, the Household State Taxes and the Household Federal Taxes of all individuals in the household 16 years of age and older.	
<b>Method</b>	Income taxes and state taxes were not estimated for the SOEP using the National Bureau of Economic Research (NBER) TAXSIM Model. This variable is not available in the SOEP.	
<b>Format</b>	N/A	
<b>Algorithm</b>	N/a	

<b>Variable Name</b>	I1111784 - I1111704
<b>Variable Label</b>	Household Private Retirement Income
<b>Unit of Observation</b>	Household
<b>Period</b>	Annual
<b>Description</b>	This variable represents the combined retirement income from private sources of all individuals in the household 16 years of age and older.
<b>Method</b>	Private pension income is the sum of supplementary civil servant pension income, company pensions, private pensions and pension income from “other” sources. See the algorithm for I11108\$\$.
<b>Format</b>	<p>The value of this variable ranges from 0 to 5.000.000. This variable is in current year EURO.</p> <p>The survey variables provided below are part of the \$PEQUIV-file. This algorithm omits individuals with survey non-responses. Note also that this information is not available in 1984 and 1985.</p>
<b>Algorithm:</b>	
<b>1984-1985:</b> algorithm:	N/a
<b>2002-2003</b> algorithm:	$I11117\$ = \text{sum of } (ICOMP\$ + IPRVP\$) \text{ over all individuals in the household}$ <p style="text-align: right;">(\$\$= 02-03)</p>
<b>1986-2001, 2004</b> algorithm:	$I11117\$ = \text{sum of } (ivbl1\$ + ivbl2\$ + icom1\$ + icom2\$ + iprv1\$ + iprv2\$ + ison1\$ + ison2\$) \text{ over all individuals in the household}$ <p style="text-align: right;">(\$\$= 86-01, 04)</p>

<b>Variable Name</b>	I1111884 - I1111804
<b>Variable Label</b>	Household Windfall Income
<b>Unit of Observation</b>	Household
<b>Period</b>	Annual
<b>Description</b>	This variable represents the amount of total household windfall income of all individuals in the household 16 years of age and older.
<b>Method</b>	Windfall income consists of one-time transfers, winnings, inheritance and gifts of money or items worth more than 5000 DM (wave Q-R) or 2500 Euro (wave S-T) . It was asked the first time in wave Q (variable qh4505 in SOEP file QH).
<b>Format</b>	<p>The value of this variable ranges from 0 to 5.000.000. This variable is in current year EURO.</p> <p>This algorithm omits individuals with survey non-responses. The original survey variables provided below can be found in the file _H.</p>
<b>Algorithm</b>	
<b>2000- 2004</b> algorithm:	<p>I11118\$\$ = Ywind        (\$\$=00-04)</p> <p>Windfall income variable list by survey year - each entry denoted in algorithm as Ywind: QH4505 RH4505 SH4505 TH44 UH44</p>

<b>Variable Name</b>	I1120184 - I1120104
<b>Variable Label</b>	Impute Household Pre-Government Income
<b>Unit of Observation</b>	Household
<b>Description</b>	<p>This variable indicates the percentage share of income that has been imputed for Household Pre-Government Income.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <p>-1 = no answer or do not know  -2 = does not apply  -3 = original value was deleted because it was found to be implausible</p> <p>The imputation procedures was used to fill in missing values represented by -1 and -3 only.</p> <p>The components of household pre-government income (I11101\$\$) are household labor income, household asset income, household private retirement income, and household private transfers. These components can be found in the Equivalent Data File.</p>
<b>Format</b>	<p>0 = Not Imputed  1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	<p>I11201\$\$= percentage share of income that has been imputed for I11101\$\$  (\$\$=84-04)</p>

<b>Variable Name</b>	I1120284 - I1120204
<b>Variable Label</b>	Impute Household Post-Government Income
<b>Unit of Observation</b>	Household
<b>Description</b>	<p>This variable indicates the percentage share of income that has been imputed for household post-government income.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <p>-1 = no answer or do not know  -2 = does not apply  -3 = original value was deleted because it was found to be implausible</p> <p>The imputation procedures was used to fill in missing values represented by -1 and -3 only.</p> <p>The components of household post-government income (I11102\$\$) are household labor income, household asset income, household private retirement income, household private transfers, household public transfers, household social security pensions, and household taxes. These components can be found in the Equivalent Data File.</p>
<b>Format</b>	<p>0 = Not Imputed  1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	<p>I11202\$\$= percentage share of income that has been imputed for I11102\$\$  (\$\$=84-04)</p>

<b>Variable Name</b>	I1120384 - I1120304
<b>Variable Label</b>	Impute Household Labor Income
<b>Unit of Observation</b>	Household
<b>Description</b>	<p>This variable indicates the percentage share of income that has been imputed for household labor income.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>

<b>Variable Name</b>	CHSPT84 – CHSPT04
<b>Variable Label</b>	Child allowance
<b>Unit of Observation</b>	Household
<b>Period</b>	Annual
<b>Description</b>	This variable represents the household income from child allowances.
<b>Method</b>	<p>In 1984 questions related to this topic were not asked. Child benefits for this year were imputed using information on the number of children in the household and the number of months the benefits were received.</p> <p>In 1985 to 2000 there was no information regarding the number of months the children allowance was claimed. In all those cases 12 months of claim was supposed.</p> <p>Since 2001 child allowances is the product of the number of months the children allowance was claimed in the previous year and the average amount per month.</p>
<b>Format</b>	<p>The value of this variable ranges from 0 to 999.999.</p> <p>This variable is in current year EURO.</p> <p>The original survey variables provided below can be found in the file _H.</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	NURSH84 – NURSH04
<b>Variable Label</b>	Nursing allowances
<b>Unit of Observation</b>	Household
<b>Period</b>	Annual
<b>Description</b>	This variable represents the household income from nursing allowances. Nursing allowances was introduced in the German welfare system in 1996. In 1996-2000 questions related to this topic were only asked for the month of the interview but not for the previous year. Housing allowances for the previous year was imputed using this information. Since 2001 both the numbers of that benefit was claimed in the previous year and the average amount per month were asked.
<b>Method</b>	Nursing allowances is the product of the number of months that benefit was claimed in the previous year and the average amount per month.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _H. This algorithm omits individuals with survey non-responses.

<b>Variable Name</b>	SUBST84 – SUBST04
<b>Variable Label</b>	Social assistance
<b>Unit of Observation</b>	Household
<b>Period</b>	Annual
<b>Description</b>	This variable represents the household income from social assistance.
<b>Method</b>	Social assistance is the product of the number of months that benefit was claimed in the previous year and the average amount per month. In 1992 through 1994 the amounts of subsistence assistance and special circumstances benefits were not asked. These values have been filled in with imputed values for total social welfare income. In 1995 through 2000 amounts of subsistence assistance <u>and</u> special circumstances benefits are imputed using an algorithm developed by Peter Krause (DIW) based on the benefits received in the present survey month.
<b>Format</b>	The value of this variable ranges from 0 to 99.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _H. This algorithm omits individuals with survey non-responses.

<b>Variable Name</b>	HSUP84 – HSUP04
<b>Variable Label</b>	Housing support for owner-occupiers
<b>Unit of Observation</b>	Household
<b>Period</b>	Annual
<b>Description</b>	This variable represents the household income from direct housing support for owner-occupiers.
<b>Method</b>	In 1996 German law established direct housing subsidy payments for owner-occupiers. Starting in the 2000 survey a separate question was asked about income from this source. Direct housing subsidy payments for respondents who bought homes between 1996 and 1999 were imputed using information about the year of construction, acquisition of ownership and number of children in the household.
<b>Format</b>	The value of this variable ranges from 0 to 9.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _H. This algorithm omits individuals with survey non-responses.

<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FNURSH84 – FNURSH04
<b>Variable Label</b>	Impute Nursing allowances
<b>Unit of Observation</b>	Household
<b>Description</b>	<p>This variable indicates if income from nursing allowances (NURSH\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FSUBST84 – FSUBST04
<b>Variable Label</b>	Impute Social assistance
<b>Unit of Observation</b>	Household
<b>Description</b>	<p>This variable indicates if income from social assistance (SUBST\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FSPHLP84 – FSPHLP04
<b>Variable Label</b>	Impute Social assistance for special circumstances
<b>Unit of Observation</b>	Household
<b>Description</b>	<p>This variable indicates if income from social assistance for special circumstances (SPHLP\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FHSUP84 – FHSUP04
<b>Variable Label</b>	Impute Housing support for owner-occupiers
<b>Unit of Observation</b>	Household
<b>Description</b>	<p>This variable indicates if income from housing support for owner-occupiers (HSUP\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	IJOB184 – IJOB104
<b>Variable Label</b>	Wages, Salary from main job
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents wages or salary from main job of individuals in the household 16 years of age and older.
<b>Method</b>	Wages or salary from main job is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$IJOB1\$ = (\$P2A02 * \$P2A03) \quad (\$ = 84 - 04, \$ = A, B, \dots, U)$

<b>Variable Name</b>	IJOB284 – IJOB204
<b>Variable Label</b>	Income from secondary employment
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from secondary employment of individuals in the household 16 years of age and older.
<b>Method</b>	Income from secondary employment is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$IJOB2\$\$ = (\$P2C02 * \$P2C03) \quad (\$\$=84 - 04, \$ = A, B, \dots, U)$

<b>Variable Name</b>	ISELF84 – ISELF04
<b>Variable Label</b>	Income from self-employment
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from self-employment of individuals in the household 16 years of age and older.
<b>Method</b>	Income from self-employment is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$\text{ISELF}\$ = (\$P2B02 * \$P2B03) \quad (\$ = 84 - 04, \$ = A, B, \dots, U)$

<b>Variable Name</b>	IOLDY84 – IOLDY04
<b>Variable Label</b>	Combined old-age, disability and civil servants pensions
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	<p>This variable represents income from combined old-age, disability and civil servants pensions of individuals in the household 16 years of age and older.</p> <p>In 2002 and 2003 separate questions regarding income from private or company pension were asked. Thus these incomes components are not included in old-age, disability and civil servants pensions in the those years.</p>
<b>Method</b>	<p>Income from combined old-age, disability and civil servants pensions is the product of the number of months that income was received in the previous year and the average amount per month.</p> <p>If the information about the number of months is missing, the sample mean of that variable has been assigned.</p>
<b>Format</b>	<p>The value of this variable ranges from 0 to 999.999.</p> <p>This variable is in current year EURO.</p> <p>The original survey variables provided below can be found in the file _PKAL.</p> <p>This algorithm omits individuals with survey non-responses.</p>
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$IOLDY_{\$} = (P2D02 * P2D03) \quad (\$ = 84 - 04, \$ = A, B, \dots, U)$

<b>Variable Name</b>	IWIDY84 – IWIDY04
<b>Variable Label</b>	Combined widows and orphans pension
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	<p>This variable represents income from combined widows and orphans pension of individuals in the household 16 years of age and older.</p> <p>In 2002 and 2003 separate questions regarding income from private or company pension were asked. Thus these incomes components are not included in widows and orphans pension in the those years.</p>
<b>Method</b>	<p>Income from combined widows and orphans pension is the product of the number of months that income was received in the previous year and the average amount per month.</p> <p>If the information about the number of months is missing, the sample mean of that variable has been assigned.</p>
<b>Format</b>	<p>The value of this variable ranges from 0 to 999.999.</p> <p>This variable is in current year EURO.</p> <p>The original survey variables provided below can be found in the file _PKAL.</p> <p>This algorithm omits individuals with survey non-responses.</p>
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$IWIDY_{\$} = (\$P2E02 * \$P2E03) \quad (\$ = 84 - 04, \$ = A, B, \dots, U)$

<b>Variable Name</b>	ICOMP84 – ICOMP04
<b>Variable Label</b>	Combined company pension (surviving dependants c.p.)
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from combined company pension of individuals in the household 16 years of age and older. In 1984-2001 and since 2004 specific questions related to this topic were not asked. Thus these income component is included in old-age, disability and civil servants pensions (IOLDY\$\$) in the those years.
<b>Method</b>	Income from combined company pension is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2001</b> algorithm:	N/a
<b>2002-2003</b> algorithm:	ICOMP\$\$ = (\$P2P02 * \$P2P03) (\$\$=02 – 03, \$ = S-T)
<b>2004</b> algorithm:	N/a

<b>Variable Name</b>	IPRVP84 – IPRVP04	
<b>Variable Label</b>	Combined private pension (old-age, accident, disability)	
<b>Unit of Observation</b>	Individual	
<b>Period</b>	Annual	
<b>Description</b>	This variable represents income from combined private pension of individuals in the household 16 years of age and older. In 1984-2001 and since 2004 specific questions related to this topic were not asked. Thus these income component is included in old-age, disability and civil servants pensions (IOLDY\$\$) in the those years.	
<b>Method</b>	Income from combined private pension is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.	
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.	
<b>Algorithm</b>		
<b>1984-2001</b> algorithm:	N/a	
<b>2002-2003</b> algorithm:	$\text{IPRVP}\$ = (\$P2Q02 * \$P2Q03)$	$(\$\$=02 - 03, \$ = S-T)$
<b>2004</b> algorithm:	N/a	

<b>Variable Name</b>	IUNBY84 – IUNBY04
<b>Variable Label</b>	Unemployment benefit
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from unemployment benefit of individuals in the household 16 years of age and older.
<b>Method</b>	Income from unemployment benefit is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$IUNBY_{\$\$} = (P2F02 * P2F03) \quad (\$\$=84-04, \$ = A, B, \dots, U)$

<b>Variable Name</b>	IUNAY84 – IUNAY04
<b>Variable Label</b>	Unemployment assistance
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from unemployment assistance of individuals in the household 16 years of age and older.
<b>Method</b>	Income from unemployment assistance is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$IUNAY_{\$\$} = (SP2G02 * SP2G03) \quad (\$\$=84 - 04, \$ = A, B, \dots, U)$

<b>Variable Name</b>	ISUBY84 – ISUBY04
<b>Variable Label</b>	Subsistence allowance
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from subsistence allowance of individuals in the household 16 years of age and older.
<b>Method</b>	Income from subsistence allowance is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$\text{ISUBY}\$ = (\text{\$P2H02} * \text{\$P2H03}) \quad (\$ = 84 - 04, \$ = \text{A, B, } \dots, \text{U})$

<b>Variable Name</b>	IERET84 – IERET04	
<b>Variable Label</b>	Old-age transition benefit	
<b>Unit of Observation</b>	Individual	
<b>Period</b>	Annual	
<b>Description</b>	This variable represents income from old-age transition benefit of individuals in the household 16 years of age and older. In 1984-1995 and since 2002 questions related to this topic were not asked.	
<b>Method</b>	Income from old-age transition benefit is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.	
<b>Format</b>	<p>The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.</p> <p>The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.</p>	
<b>Algorithm</b>		
<b>1984-1995</b> algorithm:	N/a	
<b>1996-2001</b> algorithm:	IERET\$\$ = (\$P2I02 * \$P2I03)	(\$\$=96 – 01, \$ = M, N, ... , R)
<b>2002-2004</b> algorithm:	N/a	

<b>Variable Name</b>	IMATY84 – IMATY04
<b>Variable Label</b>	Maternity benefit
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from maternity benefit of individuals in the household 16 years of age and older.
<b>Method</b>	Income from maternity benefit is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$IMATY_{\$\$} = (SP2J02 * SP2J03)$ $(\$\$=84-04, \$ = A, B, \dots, U)$

<b>Variable Name</b>	ISTUY84 – ISTUY04
<b>Variable Label</b>	Student grants
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from student grants of individuals in the household 16 years of age and older.
<b>Method</b>	Income from student grants is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$\text{ISTUY}\$\$ = (\$P2K02 * \$P2K03) \quad (\$\$=84 - 04, \$ = A, B, \dots, U)$

<b>Variable Name</b>	IMILT84 – IMILT04
<b>Variable Label</b>	Military community service pay
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from military community service pay of individuals in the household 16 years of age and older. In 1984-1995 questions related to this topic were not asked.
<b>Method</b>	Income from military community service pay is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	<p>The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.</p> <p>The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.</p>
<b>Algorithm</b>	
<b>1984-1995 algorithm:</b>	N/a
<b>1996-2004 algorithm:</b>	$IMILT\$\$ = (\$P2L02 * \$P2L03) \quad (\$\$=96 - 04, \$ = M, N, \dots, U)$

<b>Variable Name</b>	IALIM84 – IALIM04
<b>Variable Label</b>	Alimony
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from alimony of individuals in the household 16 years of age and older. In 1984-2000 specific questions related to this topic were not asked. Alimony is included in private transfers received (IELSE\$\$) in the those years.
<b>Method</b>	Income from alimony is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2000 algorithm:</b>	N/a
<b>2001-2004 algorithm:</b>	$IALIM_{\$ \$} = (P2O02 * P2O03)$ $(\$ \$ = 00 - 04, \$ = Q, R, \dots, U)$

<b>Variable Name</b>	IELSE84 – IELSE04
<b>Variable Label</b>	Private Transfers received
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from private transfers of individuals in the household 16 years of age and older. In 1984-2000 alimony is included in private transfers. Since 2001 a specific question regarding alimony (IALIM\$\$) were asked, thus alimony is no longer included in private transfers received.
<b>Method</b>	Income from private transfers is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$IELSE\$\$ = (\$P2M02 * \$P2M03)$ $(\$\$=84 - 04, \$ = A, B, \dots, U)$

<b>Variable Name</b>	I13LY84 – I13LY04
<b>Variable Label</b>	13th monthly salary
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from 13th monthly salary of individuals in the household 16 years of age and older.
<b>Method</b>	Transcribed variable.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>

<b>Variable Name</b>	IGRAY84 – IGRAY04
<b>Variable Label</b>	Profit-sharing
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from profit sharing of individuals in the household 16 years of age and older.
<b>Method</b>	Transcribed variable.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	IGRAY\$\$ = YGRY ( \$\$=84 – 04)
	Profit sharing variable list by survey year - each entry denoted in algorithm as YGRY:
	ap3910 bp5910 cp5910 dp5910 ep5410 fp7210 gp7210 hp6710 ip6710 jp7710 kp7710 lp8210 mp6810 np6810 op5910 pp7710 qp7710 rp7710 sp7710 tp9510 up8010

<b>Variable Name</b>	IOTHY84 – IOTHY04
<b>Variable Label</b>	Other bonuses
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from other bonuses of individuals in the household 16 years of age and older. In 1984 questions related to this topic were not asked. They are included in income from profit sharing (IGRAY84).
<b>Method</b>	Transcribed variable.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses.

<b>Variable Name</b>	IGRV184 – IGRV104
<b>Variable Label</b>	Statutory pension insurance
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from statutory pension insurance of individuals in the household 16 years of age and older. In 1984-1985 specific questions related to this topic were not asked. Since 2002 the statutory pension insurance did also include the social miners insurance pension (ISMP1\$\$) and farmers pension (IAGR1\$).
<b>Method</b>	Income from statutory pension insurance is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _P and _PKAL. This algorithm omits individuals with survey non-responses.

<b>Period</b>	Annual
<b>Description</b>	This variable represents income from widows and orphans private pension of individuals in the household 16 years of age and older. In 1984-2002 specific questions related to this topic were not asked.
<b>Method</b>	Income from widows and orphans private pension is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.  The original survey variables provided below can be found in the file _P and _PKAL. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2002 algorithm:</b>	N/a
<b>2003-2004 algorithm:</b>	$\text{IPRV2}\$ = (\text{SP2E02} * \text{YPRV}) \quad (\$ = 03 - 04, \$ = T, \dots, U)$  Widows and orphans private pension variable list by survey year - each entry denoted in algorithm as YPRV:  tp9714 up8214

<b>Variable Name</b>	ISON284 – ISON204
<b>Variable Label</b>	Other widows or orphans pension
<b>Unit of Observation</b>	Individual
<b>Period</b>	Annual
<b>Description</b>	This variable represents income from other widows or orphans pension of individuals in the household 16 years of age and older. In 1984-1985 specific questions related to this topic were not asked.
<b>Method</b>	Income from other widows or orphans pension is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
<b>Format</b>	<p>The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.</p> <p>The original survey variables provided below can be found in the file _P and _PKAL. This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FJOB184 – FJOB104
<b>Variable Label</b>	Imputation flag: Wages, Salary from main job
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from wages or salary from main job (IJOB1\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FJOB284 – FJOB204
<b>Variable Label</b>	Imputation flag: Income from secondary job
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from secondary job (IJOB2\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FSELF84 – FSELF04
<b>Variable Label</b>	Imputation flag: Income from self-employment
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from self-employment (ISELF\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FOLDY84 – FOLDY04
<b>Variable Label</b>	Imputation flag: combined old-age, civil servants pensions.
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from combined old-age, civil servants pensions (IOLDY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FWIDY84 – FWIDY04
<b>Variable Label</b>	Imputation flag: combined widows / orphans pension
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from combined widows or orphans pension (IWIDY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FCOMP84 – FCOMP04
<b>Variable Label</b>	Imputation flag: Combined company pension
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from combined company pension (ICOMP\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FPRVP84 – FPRVP04
<b>Variable Label</b>	Imputation flag: Combined private pension
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from combined private pension (IPRVP\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FUNBY84 – FUNBY04
<b>Variable Label</b>	Imputation flag: Unemployment benefit
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from unemployment benefit (IUNBY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FUNAY84 – FUNAY04
<b>Variable Label</b>	Imputation flag: Unemployment assistance
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from unemployment assistance (IUNAY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FSUBY84 – FSUBY04
<b>Variable Label</b>	Imputation flag: Subsistence allowance
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from subsistence allowance (ISUBY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FERET84 – FERET04
<b>Variable Label</b>	Imputation flag: Old-age transition benefit
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from old-age transition benefit (IERET\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FMATY84 – FMATY04
<b>Variable Label</b>	Imputation flag: Maternity benefit
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from maternity benefit (HSUP\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FSTUY84 – FSTUY04
<b>Variable Label</b>	Imputation flag: Student grants
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from student grants (ISTUY\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FMILT84 – FMILT04
<b>Variable Label</b>	Imputation flag: Military / community service pay
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from military or community service pay (IMILT\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FALIM84 – FALIM04
<b>Variable Label</b>	Imputation flag: Alimony
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from alimony (IALIM\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FELSE84 – FELSE04
<b>Variable Label</b>	Imputation flag: Private Transfers received
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from private transfers received (IELSE\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	F13LY84 – F13LY04
<b>Variable Label</b>	Imputation flag: 13th monthly salary
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from 13th monthly salary (I13LY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	F14LY84 – F14LY04
<b>Variable Label</b>	Imputation flag: 14th monthly salary
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from 14th monthly salary (I14LY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FXMAS84 – FXMAS04
<b>Variable Label</b>	Imputation flag: Christmas bonus
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from Christmas bonus (IXMAS\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FHOLY84 – FHOLY04
<b>Variable Label</b>	Imputation flag: Vacation bonus
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from Vacation bonus (IHOLY\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FGRAY84 – FGRAY04
<b>Variable Label</b>	Imputation flag: Profit-sharing / Gratifications
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from profit-sharing (IGRAY\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FOTHY84 – FOTHY04
<b>Variable Label</b>	Imputation flag: Other bonuses
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from other bonuses (IOTHY\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FGRV184 – FGRV104
<b>Variable Label</b>	Imputation flag: statutory pension insurance
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from statutory pension insurance (IGRV1\$\$) has been imputed. In order to reduce complexity and because of minor incidence, the imputation flag variable FGVR1 encompasses also imputation of item-non-response on any of the considered variables related to (own) pension income.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	FGRV284 – FGRV204
<b>Variable Label</b>	Imputation flag: widows or orphans statutory pension insurance
<b>Unit of Observation</b>	Individual
<b>Description</b>	<p>This variable indicates if income from widows or orphans statutory pension insurance (IGRV2\$\$) has been imputed. In order to reduce complexity and because of minor incidence, the imputation flag variable FGVR2 encompasses also imputation of item-non-response on any of the considered variables related to Widows and orphans pension income.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
<b>Method</b>	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> <li>-1 = no answer or do not know</li> <li>-2 = does not apply</li> <li>-3 = original value was deleted because it was found to be implausible</li> </ul> <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
<b>Format</b>	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

<b>Variable Name</b>	M1110184 - M1110104
<b>Variable Label</b>	Whether spent night in hospital in last year
<b>Unit of Observation</b>	Individual
<b>Description</b>	Indicates whether person stayed overnight in a hospital at any time in previous year In 1990 and 1993 this information was not asked.
<b>Method</b>	Transcribed variable.
<b>Format</b>	-2 = N/A - Child -1 = Item non-response 0 = Did not stay overnight in a hospital 1 = Stayed overnight in a hospital  The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses.

#### **Algorithm**

**1984-2001, 2003** algorithm: Data not available in SOEP

**2002** algorithm: M1112302=sp91

**2004** algorithm: M1112304=up91

<b>Variable Name</b>	M1112484 - M1112404
<b>Variable Label</b>	Disability Status of Individual
<b>Unit of Observation</b>	Individual
<b>Description</b>	This variable indicates disability status at the time of the survey for all individuals in the household 16 years of age and older.
<b>Method</b>	Disability is here defined as a share of legally attested disability of more than 30%. In 1986, 1990 and 1993 this information was in SOEP not asked. If in the following year a legally attested disability existed then this information is assigned to the previous year.
<b>Format</b>	<p>-2 = N/A – Child  -1 = Item non-response  0 = Not disabled  1 = Disabled</p> <p>The original survey variables provided below can be found in the file _P.  This algorithm omits individuals with survey non-responses.</p>

### Algorithm

Degree of disability variable list by survey year - each entry denoted in algorithm as Ydisab:  
ap5202 bp7402 cp74b02 dp0602 ep6602 fp8202 gp7702 hp7702 ip7802 jp7802 kp8402 lp9102 mp7702 np8102  
op7002 pp9702 qp9702 rp9702 sp9502 tp9902 up9202

#### 1984-2004 algorithm:

\*This step is to assign a value for 1990 using 1991 degree of disability;  
if gnetto in (1,2,3,4) and ghnetto in (1) then do; gp7702 = 0; if hp7702 > 0 then gp7702=hp7702; end;

\*This step is to assign a value for 1993 using 1992 degree of disability;  
if jnetto in (1,2,3,4) and jhnetto in (1) then do; jp7802 = 0; if ip7802 > 0 then jp7802=ip7802; end;

\*This step is to assign values to respondents in 1986 missing degree of disability information;  
if cnetto in (1,2,3,4) and chnetto in (1) then do; if cp74b02<0 then do; if bp7402 > 0 then cp74b02 = bp7402;  
end;

\*Next assign disability status for all individuals using the variable list shown above;

if Ydisab < 30 then D11110\$\$=1; (Y=a-u, \$\$=84-04)  
else D11110\$\$=0;

<b>Variable Label</b>	Satisfaction With Health
<b>Unit of Observation</b>	Individual
<b>Description</b>	This variable indicates satisfaction with health at the time of the survey for all individuals in the household 16 years of age and older.
<b>Method</b>	Individuals are asked to report how satisfied they are with their health on a scale of 0 to 10, in which 0 means totally unhappy and 10 means totally happy. Individuals reporting 0, 1, 2 or 3 are considered to be not satisfied with their health. Individuals reporting 4, 5, 6, 7, 8, 9, or 10 are considered to be satisfied with their health.
<b>Format</b>	<p>-2 = N/A - Child  -1 = Item non-response  0 = Not Satisfied  1 = Satisfied</p> <p>The original survey variables provided below can be found in the file __P.  This algorithm omits individuals with survey non-responses.</p> <p>Equivalent Data File Variable Definitions: D11101__ = Age of Individual</p>

#### Algorithm

Satisfaction With Health variable list by survey year - each entry denoted in algorithm as Ysatis

ap0301 bp0101 cp0101 dp0101 ep0101 fp0101 gp0101 hp1001 ip9801 jp0101 kp0101 lp0101 mp0101 np0101  
op0101 pp0101 qp0101 rp0101 sp0101 tp0101 up0101;

```

if D11101$$ ge 16 then do                                (Y=a-u, $$=84-04)
    if Ysatis = 0,1,2, or 3 then D11111$$ = 0
    else if Ysatis = 4, 5, 6, 7, 8, 9, or 10 then D11111$$ = 1

end
if D11101$$ lt 16 then D11111$$ = .C

```

**Variable Name** M1112684 - M1112604

**Variable Label** Self-Rated Health Status

**Unit of Observation** Individual

**Description** This variable indicates each person's self-rated health status.

**Method** Transcribed variable.

**Format:**  
-2 = N/A - Child  
-1 = Item non-response  
1 = Excellent  
2 = Very good  
3 = Good  
4 = Fair  
5 = Poor

The original survey variables provided below can be found in the file \_P.  
This algorithm omits individuals with survey non-responses.

### Algorithm

```

<b>Variable Name</b>	M1112784 - M1112704
<b>Variable Label</b>	Number of doctor visits in previous year
<b>Unit of Observation</b>	Individual
<b>Description</b>	Number of doctor visits in previous year. The SOEP asked for the number of trips to the doctor's in the last three months. This information is multiplied by 4 to get the annual figure. In the years 1984 to 1987 and 1994 the SOEP asked for various medical specialist. This information was add up to yield one measure. In 1990 and 1993 the Number of doctor visits were not asked.
<b>Method</b>	Transcribed variable
<b>Format:</b>	-2 = N/A - Child -1 = Item non-response 0 to 400 = doctors visits in previous year.
	The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses.

#### **Algorithm**

**1984-2004** algorithm: Data not available in SOEP

<b>Variable Name</b>	W1110184 - W1110104
<b>Variable Label</b>	Individual Weight
<b>Unit of Observation</b>	Individual
<b>Description</b>	Indicates the individual's sample weight.
<b>Method</b>	Individual weights to compensate for unequal probabilities of selection and sample attrition are necessary to obtain populations based statistics.
<b>Format</b>	The value of this variable ranges from 0 to 80.000.  The original survey variables provided below can be found in the file PHRF. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$W11101\$\$ = Y_{phrf} \quad (\$\$=84-04, Y=a-u)$

<b>Variable Name</b>	W1110284 - W1110204
<b>Variable Label</b>	Household Weight
<b>Unit of Observation</b>	Household
<b>Description</b>	Indicates the household's sample weight.
<b>Method</b>	Household weights to compensate for unequal probabilities of selection and sample attrition are necessary to obtain populations based statistics.
<b>Format</b>	The value of this variable ranges from 0 to 80.000.  The original survey variables provided below can be found in the file HHRF. This algorithm omits individuals with survey non-responses.
<b>Algorithm</b>	
<b>1984-2004 algorithm:</b>	$W11102_{\$\$} = Yhhrf \quad (\$\$=84-04, Y=a-u)$

<b>Variable Name</b>	W1110384 - W1110304
<b>Variable Label</b>	Longitudinal Weight
<b>Unit of Observation</b>	Individual
<b>Description</b>	Indicates the individual's longitudinal sample weight.
<b>Method</b>	<p>Longitudinal weights in the SOEP are constructed using inverse staying factors. The staying factor is the inverse of the probability that an individual participated in the named year. By themselves, W11103\$\$ are only staying factors.</p> <p>To properly weight a balanced sample of individuals represented in five years of the survey (1986 through 1990), for example, create a longitudinal weight by multiplying the individual weight in 1986 by the staying factors in 1987, 1988, 1989, and 1990.</p> <p>Example:  longitudinal weight = W1110186*W1110387*W1110388*W1110389*W1110390</p> <p>The created longitudinal weight should be used with any longitudinal sample.</p>
<b>Format</b>	<p>N/A</p> <p>The original survey variables provided below can be found in the file PHRF. This algorithm omits individuals with survey non-responses.</p>
<b>Algorithm</b>	
<b>1984 algorithm:</b>	N/A
<b>1985-2004 algorithm:</b>	$W11103\$ = Y_{pbleib} \quad (\$ = 85-04, Y = b-u)$

<b>Variable Name</b>	W1110484 - W1110404
<b>Variable Label</b>	Population Factor
<b>Unit of Observation</b>	Household
<b>Description</b>	This correction factor is already integrated into W11101\$\$ and is not repeated here.
<b>Format</b>	-1 = no information available

<b>Variable Name</b>	W1110584 - W1110504
<b>Variable Label</b>	Individual Weight - Immigrant Sample
<b>Unit of Observation</b>	Individual
<b>Description</b>	Indicates the individual's weight for the immigrant sample.
<b>Method</b>	<p>Individual weights to compensate for unequal probabilities of selection and sample attrition are necessary to obtain populations based statistics.</p> <p>These weights should be used when analyses include only the immigrant sample (D).</p> <p>For a more detailed discussion of weighting issues in the SOEP please see <i>Desktop Companion to the German Socio-Economic Panel Study (SOEP)</i>.</p>
<b>Format</b>	<p>The value of this variable ranges from 0 to 80.000.</p> <p>The original survey variables provided below can be found in the file PHRF. This algorithm omits individuals with survey non-responses.</p>
<b>Algorithm</b>	
<b>1984-1994</b>	N/A
<b>1995-2004 algorithm:</b>	$W11105\$\$ = Yphrfd \quad (\$\$=95-04, Y=l-u)$

<b>Variable Name</b>	W1110684 - W1110604
<b>Variable Label</b>	Household Weight - Immigrant Sample
<b>Unit of Observation</b>	Household
<b>Description</b>	Indicates the household's weight for the immigrant sample.
<b>Method</b>	<p>Household weights to compensate for unequal probabilities of selection and sample attrition are necessary to obtain populations based statistics.</p> <p>These weights should be used when analyses include only the immigrant sample (D).</p> <p>For a more detailed discussion of weighting issues in the SOEP please see <i>Desktop Companion to the German Socio-Economic Panel Study (SOEP)</i>.</p>
<b>Format</b>	<p>The value of this variable ranges from 0 to 80.000.</p> <p>The original survey variables provided below can be found in the file HHRF. This algorithm omits individuals with survey non-responses.</p>
<b>Algorithm</b>	
<b>1984-1994</b>	N/A
<b>1995-2004 algorithm:</b>	$W11105\$\$ = Yhhrfd * (1.05) \quad (\$\$=95-04, Y=l-u)$

Variable Name	Variable Label:
