SOEP Group

Running since 1984, the German Socio-Economic Panel study (SOEP) is a wide-ranging representative longitudinal study of private households, located at the German Institute for Economic Research, DIW Berlin.

The aim of the SOEP Survey Papers Series is to thoroughly document the survey's data collection and data processing. The SOEP Survey Papers is comprised of the following series:

Series A – Survey Instruments (Erhebungsinstrumente)

Series B – Survey Reports (Methodenberichte)

Series C – Data Documentation (Datendokumentationen)

Series D – Variable Descriptions and Coding

Series E – SOEPmonitors

Series F – SOEP Newsletters

Series G – General Issues and Teaching Materials

The SOEP Survey Papers are available at <http://www.diw.de/soepsurveypapers>

1 Overview

The variables from the annual **\$kind** files described in the following are not based on answers provided by the children themselves, but by answers to the household questionnaire provided by the respondent within the household (head of household). This data is re-aggregated on the person level and saved as child-specific entries in the file **\$kind**. The annual **\$kind** datasets also contain additional information on institutional care and school attendance for children and young people; in selected waves, questions on costs of childcare as well as on non-institutional care arrangements are also asked (these variables are not described here). However, if questions regarding institutional care or costs of child care are modified, a description is included in this documentation. The entries in *bekind* are identifiable with the codes “20“ to “25” in the wave-specific variable \$NETTO (in the file PPFAD) or the code (2) in the variable \$NETOLD. In addition to the variables described in this documentation, variables on specific topics that are not surveyed every year are an important part of the data stored in the files **\$kind**. These tables include a reference for each variable regarding its longitudinal format in KIDLONG.

2 Identifier

The variable **bekhhgr** is simply a copy of the variable **\$HHGR** in the wave-specific file \$HBRUTTO. Based on **bekhhgr** for each child in *bekind* the variable **bekzahl** provides the total number of children up to age 16 living in the current household

hhnr – Household id (origin)

hhnrakt – Household id (current)

behnr – Household id

sample1 – NA

Variable **sample1** depicts the sample membership of each child.

persnr – Permanent person id

Unique person identifier for each person in the SOEP-CORE database

syear – Year of interview

3 Basic Demographics/ relationship to household head (hh)

This section summarizes a child's gender **beksex** and his/ her relationship to the household head **\$kstell**. A child's sex can in some cases diverge from the longitudinally tested data in PPFAD (variable **sex**). The information stored in **\$kstell** is a copy of the variable **\$stell** in the wave-specific file \$PBRUTT.

bekjahr – Year of birth

? What year were these children born? // Year of birth: (*from: soep-core/soep-core-2014-hh/73:hkgeba*)

? What year were these children born? // Year of birth: (*from: soep-core/soep-core-2014-hh-mig/73:hkgebd*)

The „year of birth” of a child is included in all wave-specific datasets.

The variable **bek7817** indicates that a child does not participate in any activities for children above the age of 6

8 Variables on costs of institutions, carer, activities etc.

bek7901 – Amount of costs per month in Euro

? How much do school, care, and the activities described above cost you? // Average monthly cost in euros (*from: soep-core/soep-core-2014-hh/79:hakt18a*)

? How much do school, care, and the activities described above cost you? // Average monthly cost in euros (*from: soep-core/soep-core-2014-hh-mig/79:hakt18d*)

The variable **bek7901** describes the costs of school, care and activities. In wave BA (2010) average monthly costs were surveyed: “How much do the above mentioned school, care and activities cost you?” Parents indicate average monthly cost of their children regarding school, care, and (leisure) activities, e.g., early music education, sports, etc.. In wave BA this variable was surveyed for the 1st time.

bek7902 – No costs

Corresponding to parents’ estimation of average monthly costs **bek7901** “no costs” indicates if parents do not have any costs.

9 Pointer

The pointers provided in **bekind** comprise **persnr** of the household head of the child **bekhv**, the partner of the household head **bekhvp**, the mother of the child **bekmutti**, and the partner of the mother **bekmup**. The first two pointers **bekhv** and **bekhvp** are using the codes (0) and (1)/ (2) of **s\$TELL** in the wave-specific **\$PBRUTTO**. After extensive testing of the distribution of the data up to that point, the pointers to mother (variable

bekmutti) and mother's partner (variable **bekmup**) were revised in July 1994 for SOEP waves A (1984) to J (1993), since in some cases these variables showed a very high percentage of missings. The identifiers linking the PERSNR of a child's mother to each child in *bekind*, are based on the variables **\$STELL**, **PARTNR\$\$** in the wave-specific files **\$PGEN** and if possible information from the files **BIOBIRTH** or **BIOAGE01**. More information on **bekmutti** is included in the comment section of **bekmutti**

bekhv – Pointer to head of household

PERSNR of the HH head, i.e. person with **\$stell=0** in the wave-specific file **\$PBRUTTO**.

bekhvp – Pointer to partner of head of

PERSNR of the partner of the household head. It is defined by combining the variables **\$stell** (relationship to household head) in the wave-specific file **\$PBRUTTO** and the information of **PARTNR\$\$** in the wave-specific file **\$PGEN**. The partner information of **PARTNR\$\$** is only taken into account when an individual provided the information.

bekmutti – Pointer to mother

PERSNR of a child's mother. After extensive testing of the distribution of the data up to that point, the pointers to mother (variable **\$kmutti**) and mother's partner (variable **\$kmup**) were revised in July 1994 for SOEP waves A (1984) to J (1993), since in some cases these variables showed a very high percentage of missings. The procedure for generating the pointers was modified to identify the mother-child relationship as a combination of the variables **\$STELL** (=relationship to household head) and **PARTNR\$\$** (=person ID number of spouse or partner). The information of **PARTNR\$\$** in the wave-specific **\$PGEN** is only available when an interview took place with the partner. If this data is lacking the combination of relationship to household head of the mother and of the mother's partner is used. In this context, for waves A to J, the newly generated pointers were tested longitudinally over time for consistency. While it is quite realistic that a mother would change partners over time, (e.g., second marriage after partner's death, or separation from partner), it seems less plausible that there would be pointers to different mothers for the different survey years. According to a strictly biological definition of motherhood, this would certainly not be possible, but according to a social definition of motherhood, it would be possible to have a „new/ social“ mother after the biological mother dies or moves out. This problem is quantitatively insignificant, however (e.g., a changing mother pointer was only identical for 29 children from wave A to J). Further information on the definition of social/ biological mother-child relationships in the SOEP can be found in the BIO documentation for the files **BIOBIRTH**.

bekmup – Pointer to partner of mother

PERSNR of the partner of a child's mother based on **partners\$\$** of the mother in the person-related files **\$PGEN**. Please see also the description of **bekmutti**.
