1 Overview

\$HBRUTTO covers all households, who were successfully interviewed for the first time in wave \$ or were contacted for the purpose of being interviewed again in wave \$.

The data sets provide gross cross-sectional information on all SOEP households' interviews as well as their positions in the panel frame work. Therefore, the variables HHNR, HHNRAKT, \$HHNR, SAMPLE1, and SOURCE are included in the datasets.

The data sets also contain information on:

- The household's region
- Gross information on the persons living in the household
- The date of the last interview
- Adress and contact information
- The date of the last interview
- Interviewer and contact information
- Work form information
- Incentive and additional information

All documented distributions relate to Version31 of the SOEP data (2014).
