Summary — x

## PART I: Generalities and Scope of the Book

### 1 Generalities — 2

- 1.1 Information-Theoretic Maximum Entropy Principle and Inverse Problem — 2
  - 1.1.1 Information-Theoretic Maximum Entropy Principle — 2
  - 1.2 Motivation of the Work — 4
    - 1.2.1 Frequent Limitations of Shannon-Gibbs Maximum Entropy Econometrics — 4
    - 1.2.2 Rationale of PI-Related Tsallis Entropy Econometrics and Low Frequency Series — 6
  - 1.3 National Accounts-Related Models and the Scope of this Work — 10
- Bibliography – Part I — 11

## PART II: Statistical Theory of Information and Generalised Inverse Problem

### 1 Information and its Main Quantitative Properties — 16

- 1.1 Definition and Generalities — 16
- 1.2 Main Quantitative Properties of Statistical Information — 19

### 2 Ill-posed Inverse Problem Solution and the Maximum Entropy Principle — 22

- 2.1 Introduction — 22
- 2.2 The Inverse Problem and Socio-Economic Phenomena — 22
  - 2.2.1 Moore-Penrose Pseudo-Inverse — 23
  - 2.2.2 The Gibbs-Shannon Maximum Entropy Principle and the Inverse Problem — 25
  - 2.2.3 Kullback-Leibler Cross-Entropy — 27
- 2.3 General Linear Entropy Econometrics — 28
  - 2.3.1 Reparametrization of Parameters — 28
- 2.4 Tsallis Entropy and Main Properties — 29
  - 2.4.1 Definition and Shannon-Tsallis Entropy Relationships — 29
  - 2.4.2 Characterization of Non-Extensive Entropy — 31
    - 2.4.2.1 Correlations — 31
    - 2.4.2.2 Concavity — 32
  - 2.4.3 Tsallis Entropy and Other Forms of Entropy — 33

2.4.3.1	Characterization —	34
2.4.3.2	Scale of q-Tsallis Index and its Interpretation —	35
2.5	Kullback-Leibler-Tsallis Cross-Entropy —	35
2.5.1	The q-Generalization of the Kullback-Leibler Relative Entropy —	35
2.5.2	Tsallis Versions of the Kullback-Leibler Divergence in Constraining Problems —	37
2.6	A Generalized Linear Non-Extensive Entropy Econometric Model —	38
2.6.1	A General Model —	38
2.6.2	Parameter Confidence Interval Area —	40
2.7	An Application Example: a Maximum Tsallis Entropy Econometrics Model for Labour Demand —	42
2.7.1	Theoretical Expectation Model —	42
2.7.2	A Generalized Non-Extensive Entropy Econometric Model —	43
2.7.2.1	General Model —	43
2.7.3	Estimated Confidence Area Of Parameters —	44
2.7.4	Data and Model Outputs —	45
	<b>Annex A —</b>	<b>48</b>
	<b>Annex B: Independence of Events Within q-Generalized Kullback-Leibler Relative Entropy —</b>	<b>49</b>
	Bibliography – Part II —	50

## Part III: Updating and Forecasting Input-Output Transaction Matrices

1	<b>Introduction —</b>	<b>54</b>
2	<b>The System of National Accounts —</b>	<b>55</b>
3	<b>The Input-Output (IO) Table and its Main Application —</b>	<b>56</b>
3.1	The I-O Table and Underlying Coefficients —	56
3.2	Input-Output Multipliers —	58
3.2.1	The principal models —	58
3.2.2	A Model of Recovering the Sectorial Greenhouse Gas Emission Structure —	61
3.3	Updating and Forecasting I-O Tables —	64
3.3.1	Generalities —	64
3.3.2	RAS Formalism and its Limits —	65
3.3.3	Application: Updating an Aggregated EU I-O Matrix —	68
3.3.3.1	The RAS Approach —	68
3.3.3.2	The Entropy Approach —	72
3.3.3.3	I-O table Forecasting —	73
3.3.3.4	The Non-Extensive Cross-Entropy Approach and I-O Table Updating —	75
3.3.3.5	Forecasting an I-O Table —	77

3.3.4	Application: Forecasting the Aggregated 27 EU IO Coefficients —	79
3.3.5	Emission Coefficients Forecasting: A Theoretical Model —	81
3.4	Conclusions —	83
	Bibliography – Part III —	83

## **PART IV: Social Accounting Matrix**

1	<b>Position of the Problem —</b>	<b>88</b>
2	<b>A SAM as a Walrasian Equilibrium Framework —</b>	<b>90</b>
3	<b>The Social Accounting Matrix (SAM) Framework —</b>	<b>93</b>
3.1	Generalities —	93
3.2	Description of a Standard SAM —	94
4	<b>Balancing a SAM —</b>	<b>97</b>
4.1	Shannon-Kullback-Leibler Cross-Entropy —	98
4.2	Balancing a SAM Through Tsallis-Kullback-Leibler Cross-Entropy —	100
4.3	A SAM as a Generalized Input-Output System —	101
4.3.1	A Generalized Linear Non-Extensive Entropy Econometric Model —	102
4.4	Input-Output Power Law (PI) Structure —	105
4.5	Balancing a SAM of a Developing Country: the Case of the Republic of Gabon —	107
4.5.1	Balancing the SAM of GABON by Tsallis Cross-Entropy Formalism —	108
4.6	About the Extended SAM —	111
5	<b>A SAM and Multiplier Analysis: Economic Linkages and Multiplier Effects —</b>	<b>117</b>
5.1	What are the Economic Linkages and Multiplier Effects? —	117
5.1.1	A SAM Unconstrained Multiplier —	119
5.1.2	Equation System for Constrained SAM Multiplier —	121
5.1.3	On Modelling Multiplier Impact for an Ill-Behaved SAM —	122
	<b>Annex C. Proof of Economy Power Law Properties —</b>	<b>122</b>
	Bibliography – Part IV —	129

## **PART V: Computable General Equilibrium Models**

1	<b>A Historical Perspective —</b>	<b>134</b>
2	<b>The CGE Model Among Other Models —</b>	<b>137</b>
3	<b>Optimal Behaviour And The General Equilibrium Model —</b>	<b>138</b>
3.1	Introduction —	138
3.2	Economic Efficiency Prerequisites for a Pareto Optimum —	140
4	<b>From a SAM to a CGE Model: a Cobb-Douglas Economy —</b>	<b>143</b>
4.1	CGE Building Steps —	143
4.2	The Standard Model of Transaction Relationships —	146

<b>5</b>	<b>Estimating the CGE Model Through the Maximum Entropy Principle — 151</b>
5.1	Introduction — 151
5.2	Estimation Approach — 153
5.3	Application: Non-Extensive Entropy and Constant Elasticity of Substitution-Based Models — 158
5.3.1	Power Law and the Constant Elasticity of Substitution (CES) Function — 159
5.3.2	Parameter Outputs of the Tsallis Relative Entropy Model — 163
5.4	Conclusions — 169
	Bibliography – Part V — 169

## **Part VI: From Equilibrium to Real World Disequilibrium: An Environmental Model**

<b>1</b>	<b>Introduction — 176</b>
<b>2</b>	<b>Extending to an Environmental Model — 179</b>
2.1	The Model of Carbon Tax — 181
2.2	Carbon Tax Model And Double-Dividend Hypothesis — 183
<b>3</b>	<b>Compensatory and Equivalent Variations: Two Types of Welfare Measurement — 185</b>
	Bibliography – Part VI — 189
<b>1</b>	<b>Concluding Remarks — 193</b>

## **Appendix — 195**

	<b>Annex C. Computational Aspects of Using GAMS — 195</b>
1.1	Introduction to GAMS — 195
1.2	Formulation of a Simple Linear Problem in GAMS — 195
1.3	Application to Maximum Entropy Models — 196
1.3.1	The Jaynes Unbalanced Dice Problem — 196
1.3.2	Nonlinear Non Extensive Entropy Econometric Model — 197
	<b>Annex D. Recovery of Pollutant Emissions by Industrial Sector and Region: an Instructional Case — 201</b>
1.1	Introduction — 201
1.2	Recovery of Pollutant Emission by Industrial Sector and Region: the Role of the a Priori — 201

**Index of Subject — 205**

**Index of Authors — 206**
