SOEP-IS 2017—BIOPAREN: Biography Information on the Parents

SOEP-IS Group

Running since 1984, the German Socio-Economic Panel (SOEP) is a wide-ranging representative longitudinal study of private households, located at the German Institute for Economic Research, DIW Berlin.

The aim of the SOEP Survey Papers Series is to thoroughly document the survey's data collection and data processing.

The SOEP Survey Papers is comprised of the following series:

Series A – Survey Instruments (Erhebungsinstrumente)

Series B – Survey Reports (Methodenberichte)

Series C – Data Documentation (Datendokumentationen)

Series D – Variable Descriptions and Coding

Series E – SOEPmonitors

Series F – SOEP Newsletters

Series G – General Issues and Teaching Materials

The SOEP Survey Papers are available at <http://www.diw.de/soepsurveyspapers>

1 General Information

Short summary

The aim of the data file BIOPAREN is to make the biography entries on the parents and on the social origin of the respondent available.

How biography information has been collected in the SOEP-IS

The intergenerational aspects of the persons surveyed are mainly by the information collected in the Biography Questionnaire. Data on respondents in Sample E (10 and 11) for years 1999 - 2011 as well as data on respondents in Sample I (19) for year 2010 have been taken over from the SOEP Core BIOPAREN dataset. In addition to the Biography Questionnaire, there has been an independent questionnaire (Youth Questionnaire) in SOEP Core since 2000 for the group of survey participants who are 16-17 years old and are being interviewed for the first time. From the wave 2011 onwards, all data are generated using exclusively information from the SOEP-IS Biography Questionnaire; there is no Youth Questionnaire in SOEP-IS.

How is BIOPAREN generated

The information available in BIOPAREN is obtained in two different ways. On the one hand, BIOPAREN includes the children's proxy entries on the parents from the Biography Questionnaire and the Youth Questionnaire. On the other hand, it contains the direct entries from the parents in the case the respondent lives in the same household as his parents. Every respondent is asked for information on the regional mobility of the children, as well as on the religious affiliation of the parents. However, information on the year of birth, as well as the education and occupational training of the parents, additional to the professional position and occupation of the father are not collected due to the filter command in the questionnaire when the parents (or the father) live in the same household as the child at the time of the survey. In this case, the direct entries of the parents are used. The identification of the parents occurs first of all through the variable STELL (relationship to head of household). The second source of information is the population of the file KIND, which includes all children under the age of 16. The file contains the personal number of the mother, as well as the personal number of the partner of the mother. Through both variables the mother, as well as the latest partner of the mother are identified, ideally, at the time when the child is 16 years old and thus one year before the first survey of the child. In the case the parents could not be identified by the STELL variable, this information is used. In a further step the biological mother is identified through the mother-child relationship in the file BIOBIRTH. In the event that still no personal number for the mother exists, the number from BIOBIRTH is used. Since 2001, an extra BIOBIRTH data-set exists for fathers (BIOBRTHM), which provides a new way of identifying fathers of SOEP-respondents. Since 2014, SOEP-IS does not deliver BIOBRTHM and integrates information on fathers into the BIOBIRTH dataset with an indicator on the gender of a parent.

2 Variables in File BIOPAREN

cid – Original Household Number

pid – Never Changing Person ID

bioyear – Year Of Biography Survey

1998	1998	0
1999	1999	750
2000	2000	22
2001	2001	25
2002	2002	25
2003	2003	34
2004	2004	16
2005	2005	23
2006	2006	21
2007	2007	33
2008	2008	15
2009	2009	18
2010	2010	1905
2011	2011	222
2012	2012	1720
2013	2013	2003
2014	2014	2302
2015	2015	205
2016		1729
2017		177
-1	[-1] No Answer	0
-2	[-2] Does Not Apply	0
-3	[-3] Answer Improbable	0
-4	[-4] Inadmissible Multiple Answer	0
-5	[-5] Not Contained In Questionnaire	0
-6	[-6] Questionnaire Version With Modified Filtering	0

The variable BIOYEAR tells in which year the information was surveyed.

fpid – Person Number Father

-1	[-1] No Answer	10192
-2	[-2] Does Not Apply	1
-3	[-3] Answer Improbable	0
-4	[-4] Inadmissible Multiple Answer	0
-5	[-5] Not Contained In Questionnaire	0
-6	[-6] Questionnaire Version With Modified Filtering	0

See description of MPID.

mpid – Person Number Mother

-1	[-1] No Answer	9953
-2	[-2] Does Not Apply	1
-3	[-3] Answer Improbable	0
-4	[-4] Inadmissible Multiple Answer	0
-5	[-5] Not Contained In Questionnaire	0
-6	[-6] Questionnaire Version With Modified Filtering	0

The personal ID of the parents (fpid and mpid) is generated in three steps. 1. The parents of the respondent are identified by the relationship to the head of the household (STELL in BRUTTO). Ideally, the children's parents are identified at the time of the first survey of the child, i.e., when the child is 18 years old. Furthermore, the social parents and not necessarily the biological parents are identified. 2. The parents of the respondent are identified via the mother's ID as well as the mother's partner ID in KIND. By using these variables the "oldest" parents are identified. Ideally, these are the parents at the time the child is 17 years old (one year before the first survey). 3. The mother-ID of the respondent can be identified in BIOBIRTH (1999 onwards). The father-ID in BIOBRTHM (2001 – 2013) and BIOBIRTH (2014 onwards). As BIOPAREN aims at identifying the parents that live in the household when the child is 18 years old, the steps above are carried out in the hierarchy 1-3 with step 1 having the highest priority. If one is interested in only biological parents, please have a look at the information in BIOBIRTH and BIOBRTHM.

bio – Form Of Biography Questionnaire

0	[0] Participation before 2001	772
1	[1] Biography Questionnaire	8473
2	[2] Youth Questionnaire	2000

Since 2008 the variable BIO is generated to indicate the origin of the information in BIOPAREN (Biography or Youth Questionnaire). This information is valid for all cases from 2001 onwards.

-6 [-6] Questionnaire Version With Modified Filtering	0

Since 2008 the variables ALTER, VALTER and MALTER were added to BIOPAREN. The variable ALTER gives the age of the respondent at the moment of the interview. VALTER gives the age of the respondents' father when the respondent answered the Biography Questionnaire or the Youth Questionnaire. The same was applied for the mothers with the variable MALTER. In order to generate the variables the information for the parents who are identified in the SOEP was gained with data from PPFAD. The proxy entries from BIOPAREN were used when there weren't any information of the respondents parents available.

-6 [-6] Questionnaire Version With Modified Filtering	0

In a first step, the information of the year of birth comes from the Biography Questionnaire. Due to a filter command, the children's proxy entries are only available for these variables when the parents or one parent and the child do not live in the same household at the time of the survey. After the parents' personal numbers have been identified the information can be compared with the entries in PPFAD. If there are differences of +/- two years the FPID / MPID will be set as missing. For the missing entries the information of the parents' year of birth is taken from PPFAD.

The variables are generated as usual using the information from the Youth Questionnaire or the Biography Questionnaire and the parents' direct-entries from PPFAD. As a next step the annual proxy information on a parent's death from the P-files are used. Furthermore we use information of the month of death of a parent from the year before. That means we have information on the death of a father or a mother for the years 2002 onwards. With this data a wrong marking as "no death in 2002" / "death in 2003" can be corrected if there is data from 2003 indicating that one parent died e.g. in October 2002. The variables VTODJ and MTODJ will be updated with new survey information. They are updated as long as the father or the mother is part of the SOEP sample. Since 2003 we additionally use the annual proxy information of respondents about reported life events of the last year.

vsbil – Level Of Education Father

? What type of school leaving certificate did your father attain? (*from: soep-is/soep-is-2017-f/Q485:lv05[]*)

-6	[-6] Questionnaire Version With Modified Filtering	0

The parents' education is generated with information from the Youth Questionnaire, the Biography Questionnaire and direct entries from the PGEN-files. Due to the filter command, the children's proxy entries are only available for VSBIL / MSBIL when the parents or one parent and the child do not live in the same household at the time of the survey. Along with other variables already contained in BIOPAREN, there will be an update with new survey information, insofar as no valid values exist in BIOPAREN.

vsinfo – Origin SBIL Father

The question is only asked to youngsters who are not living in the same household as their parents. PGEN information is used to compute a variable with data from 2006 onwards. In a further step the parents' personal numbers are used to match information on parents' nationality with data from the PGEN-files in the case if there are missing entries.

These variables give information about the country of origin of the respondents mother (MORIGIN) and father (VORIGIN). This information is collected in the Youth Questionnaires since 2007. Another source of information can be found in PPFAD by the direct-entries of the parents in the variable CORIGIN. These two kinds of information, proxy- and direct-entries, are used to generate MORIGIN and VORIGIN. In a first step we use the proxy-information for all the parents whose children made an entry in the Youth Questionnaire. For all the

parents where there are no proxy-information available, we then use the direct-entries of the parents from the PPFAD-variable CORIGIN.

The questions about the religious affiliation of the parents are only asked to youngsters who are not living in the household of their parents. In order to provide as much information as possible we gather data from the Personal Questionnaires. The reconstruction of the information on the parents' religion is restricted to the survey years 1997, 2003 and 2007 as they are the only years where information of a respondent's religious affiliation is available. In all survey years the question was formulated differently but the information is made as consistent as possible.

The children's proxy entries on professional position and occupation of the father (VBSTELL) as well as VISCO88 and all prestige scores are available when the father and the child do not live in the same household at the time of the survey and if the father lived in Germany when the child was 16 years old. Since 2000, the same applies to the entries of the mother for MVSTELL and MISCO88. Besides the proxy entries parents' direct information from the \$P-files are used.

This variable is designed to provide data on job classification for fathers according to the classification of the German Federal Statistical Office (StaBuA) from 1992. The recoding has been documented in Hartmann/Schütz 2002.

In the SOEP-IS, vbklas92 is released up until 2016 and coded to [-5] afterwards. Starting in 2017, only vbklas10 scores will be released.

This variable is designed to provide data on job classification for mothers according to the classification of the German Federal Statistical Office (StaBuA) from 1992. The recoding has

been documented in Hartmann/Schütz 2002.

In the SOEP-IS, mbklas92 is released up until 2016 and coded to [-5] afterwards. Starting in 2017, only mbklas10 scores will be released.

Statistisches Bundesamt (1996): Bevölkerung und Erwerbstätigkeit, Fachserie 1, Reihe 4.1.2., Beruf, Ausbildung und Arbeitsbedingung der Erwerbstätigen 1995 (Ergebnisse des Mikrozensus). These variables are designed to provide data on occupational activity for fathers and mothers according to the International Standard Classification of Occupations ISCO-88.

ISCO-88 is a strictly four-digit classification, and this variable is therefore coded in four-digit form. In contrast to the previous version of the classification system, ISCO-68, ISCO-88 does not use blanks if there is no adequate information for specific coding, but uses zeros instead. Thus 4000 stands for an unspecified office job; 2300 stands for teachers and 2000 stands for scientists, both without closer specification. There is no conversion key since the two classifications differ significantly. Hartmann and Schütz (2002) provide detailed information on the conducted occupational coding. This result has been slightly modified to fit to the ISCO-88 version for European Union purposes (ISCO-88(COM)).

In the SOEP-IS, ISCO-88 (visco88 & misco88) is released up until 2016 and coded to [-5] afterwards. Starting in 2017, only ISCO-08 scores will be released (see visco08 & misco08).

Hartmann/Schütz (2002): *Die Klassifikation der Berufe und der Wirtschaftszweige im Sozioökonomischen Panel. Neuvercodung der Daten 1984–2001. Infratest Sozialforschung, München.* <https://www.diw.de/documents/a>

These variables are designed to provide data on occupational activity for fathers and mothers according to the International Standard Classification of Occupations ISCO-08 (Version of the ILO). ISCO-08 is a strictly four-digit classification, and this variable is therefore coded in four-digit form.

ISCO-08 was adopted through a resolution of a Tripartite Meeting of Experts on Labour Statistics held in December 2007. This resolution was subsequently endorsed by the Governing Body of the ILO in March 2008.

These variables give the occupational prestige score developed by Wegener (1988) for fathers and mothers. Like the SIOPS prestige score, Wegener's prestige scale measures a person's occupational prestige and was developed especially for use in the Federal Republic of Germany. MPS is assigned based on the German Federal Statistical Office's occupational classification of 1992 (KLAS). The procedure has been documented in Frietsch and Wirth (2001).

In the SOEP-IS, vmmps92 & mmmps92 are released up until 2016 and coded to [-5] afterwards. Starting in 2017, only vmmps08 & mmmps08 scores will be released.

Wegener, Bernd (1988): *Kritik des Prestiges*, Opladen. Frietsch, Rainer, and Heike Wirth (2001): *Die Übertragung der Magnitude-Prestigeskala von Wegener auf die Klassifikation der Berufe*. In: *ZUMA Nachrichten* 48 (Jg.25): 139-165.

The Magnitude-Prestige-Scale (MPS) is a tool for operationalising the social position of occupations in empirical surveys. In contrast to alternative instruments such as the Standard International Occupational Prestige Scale (SIOPS) or the International Socio-economic Index of Occupational Status (ISEI), the MPS is an instrument that was constructed for analyses on the national level only (Christoph, 2005). Starting in SOEP-IS wave 2016, mps08 is derived from ISCO-88 scores that themselves are derived from ISCO-08 scores using the „derivescores“ STATA package (<https://github.com/dirtyhawk/stata-derivescores>). In the SOEP-IS, vmmps08 & mmmps08 were first implemented in wave 2016 and are coded [-5] in all previous waves.

These variables give the occupational prestige score index for fathers and mothers. SIOPS is based on ISCO-88 and was developed by Donald Treiman et al. The scale ranges from 6 to 78. Starting in SOEP-IS wave 2016, vsiops08 & msiops08 are derived from ISCO-88 scores that themselves are derived from ISCO-08 scores using the „derivescores“ STATA package (<https://github.com/dirtyhawk/stata-derivescores>). This recoding is derived from Ganzeboom's SPSS script iskotrei.sps. (<http://www.harryganzeboom.nl/isco88/index.htm>). In the SOEP-IS, vsiops08 & msiops08 were first implemented in wave 2016 and are coded [-5] in all previous waves.

These variables reflect the Standard International Socio-Economic Index of Occupational Status for fathers and mothers. The ISEI Index was developed in 1992 by Ganzeboom, De Graaf, Treiman, and De Leew based on information about income, education, and occupation. Technically, ISEI was created by scaling the ISCO-88 classification. The values for the variable range between 16 and 90. In contrast to the prestige scores of Ganzeboom and Treiman (1996) and Wegener (1988), ISEI is a measure of socio-economic status. It is derived from the ISCO-88 code of the current occupation using the Stata ado iskoisei by John Hendrick which itself is based on Harry Ganzeboom's SPSS algorithms.

In the SOEP-IS, visei88 & misei88 are released up until 2016 and coded to [-5] afterwards. Starting in 2017, only visei08 & misei08 scores will be released.

-5 [-5] Not Contained In Questionnaire	0
-6 [-6] Questionnaire Version With Modified Filtering	0

The variables VAORTAKT and MAORTAKT contain the latest available information about the parents' residence and on whether or not they are deceased, respectively. For persons without identified parents who answered the biography questionnaire up to the year 2011, the most recent available information from the Personal Questionnaire in, 2001, 2006 or 2011 was assumed. For those persons whose parents are identified in the SOEP, the information on the year of death in PPFAD was used for updating. If the year of death lies chronologically after the latest available information, VAORTAKT and MAORTAKT were put on "Has Died".

maortup – Year of Update of MAORTAKT

2001	75
2006	634
2007	19
2008	24
2010	1808
2011	304
2012	28
2013	213
2014	162
2015	98
2016	202
2017	95
-1 [-1] No Answer	74
-2 [-2] Does Not Apply	2307
-3 [-3] Answer Improbable	0
-4 [-4] Inadmissible Multiple Answer	0
-5 [-5] Not Contained In Questionnaire	5202
-6 [-6] Questionnaire Version With Modified Filtering	0

The variable contains the year, in which the information stored in VAORTAKT and MAORTAKT has been updated.
