## SOEP Survey Papers

Series D – Variable Descriptions and Coding

SOEP – The German Socio-Economic Panel at DIW Berlin

2020

# SOEP-Core v35 – BIOAGE17: The Youth Questionnaire

Tabea Naujoks and SOEP Group

Running since 1984, the German Socio-Economic Panel (SOEP) is a wide-ranging representative longitudinal study of private households, located at the German Institute for Economic Research, DIW Berlin.

The aim of the SOEP Survey Papers Series is to thoroughly document the survey's data collection and data processing.

The SOEP Survey Papers is comprised of the following series:

**Series A** – Survey Instruments (Erhebungsinstrumente)  
**Series B** – Survey Reports (Methodenberichte)  
**Series C** – Data Documentation (Datendokumentationen)  
**Series D** – Variable Descriptions and Coding  
**Series E** – SOEPmonitors  
**Series F** – SOEP Newsletters  
**Series G** – General Issues and Teaching Materials

The SOEP Survey Papers are available at <http://www.diw.de/soepsurveypapers>

**Editors:**

Dr. Jan Goebel, DIW Berlin  
Prof. Dr. Stefan Liebig, DIW Berlin and Freie Universität Berlin  
Dr. David Richter, DIW Berlin and Freie Universität Berlin

# BIOAGE17: The Youth Questionnaire<sup>1</sup>

by Tabea Naujoks<sup>2</sup>

A special group of first time respondents are young persons living in a panel household, who reach the surveying age of 17 years. From this specific group of panel entrants, we are able to obtain some more detailed information on youth and socialisation than from other new sample members. At the same time, certain life-course dimensions (as the partnership- or employment biography) have not yet developed in 17 year-olds. With regard to these specifics, the standard Biography Questionnaire (see Chapter \$\$\$) is not appropriate to this group. Thus, we use a specific questionnaire for this special group of first time respondents: the Youth Questionnaire. This instrument is used since the year 2000 and can be understood as an alternative version of the Biography Questionnaire, collecting more comprehensive information on relationships with parents, leisure-time activities, and past achievements in school, as well as on personality characteristics. In addition, there are numerous prospective questions about educational plans and plans for further training, as well as questions about expectations for future career and family.

A number of statements regarding specific circumstances — including the expectations for the future mentioned above — are directly related to the time at which the questionnaire was completed. However, they provide a multifaceted background for long-term analyses since these young people will continue to be interviewed in subsequent years like other SOEP respondents. The Youth Questionnaire also contains retrospective questions, for example, at what age the teenager started his or her first job or first music lessons, what recommendations he or she received regarding choice of secondary school level, and which grades he or she repeated.

Before the development of the Youth Questionnaire, the Biography Questionnaire was used to collect biographical data from the 17 year-olds. These data are stored in the longitudinal dataset BIOL.

## 1 Genesis and Target Population of the Youth Questionnaire

The Youth Questionnaire is aimed at youths who have reached the surveying age of 17 years<sup>3</sup> and are therefore being interviewed for the first time.

A preliminary version of the Youth Questionnaire was tested in 2000 in samples A-E on individuals born in 1983. An expanded and revised questionnaire entered the field one year

---

<sup>1</sup> In earlier SOEP-data releases BIOAGE17 was called BIOYOUTH.

<sup>2</sup> Replaces earlier versions by Henning Lohmann and Sven Witzke, Jürgen Schupp and Michaela Frühling, Thorsten Schneider, Bettina Isengard, Mila Staneva and Marco Giesselmann.

<sup>3</sup> More precisely, this refers to youths who live in an already existing panel household and are or will turn 17 years old in the year of the survey. They are therefore 16 or 17 years old at the time of the interview.

later, in 2001, for all samples (A-F). In samples A-E, young people born in 1984 were surveyed, and in sample F, those born in the years 1982 to 1984. With the expansion of the number of birth cohorts, entries for the birth year 1983 are also collected for sample F (data previously existed only for samples A-E), which also creates a clear increase in the number of entries. In the following years, also the youths from additional samples have been interviewed. **In 2014, Data from the SOEP-related FID-study from the years 2010 to 2014 has been integrated in the SOEP (Sample L). Therefore, the number of cases in BIOAGE 17 has increased with SOEP Version 31 retrospectively for the years 2010 to 2013, compared with previous versions. You might want to use the psample-variable as filter, if you want to exclude these cases and reproduce your old sample.** For an overview of the target population in each survey year, see Table 1. In total, we have gathered interview data from 8,381 analysable observations up to the present.

**Table 1: Target Population for the Youth Questionnaire by year, sample and age**

Suvey year	Sample										frequency
	A-E	F	G	H	I	J	K	L	M	O	
2000	17 yrs										232
2001	17 yrs	17-19 yrs									618
2002	17 yrs	17 yrs									352
2003	17 yrs	17 yrs	17 yrs								365
2004	17 yrs	17 yrs	17 yrs								373
2005	17 yrs	17 yrs	17 yrs								368
2006	17 yrs	17 yrs	17 yrs								307
2007	17 yrs	17 yrs	17 yrs	17 yrs							346
2008	17 yrs	17 yrs	17 yrs	17 yrs							261
2009	17 yrs	17 yrs	17 yrs	17 yrs							243
2010	17 yrs	17 yrs	17 yrs	17 yrs	17 yrs			17 yrs			404
2011	17 yrs	17 yrs	17 yrs	17 yrs		17 yrs		17 yrs			531
2012	17 yrs	17 yrs	17 yrs	17 yrs		17 yrs	17 yrs	17 yrs			537
2013	17 yrs	17 yrs	17 yrs	17 yrs		17 yrs	17 yrs	17 yrs			567
2014	17 yrs	17 yrs	17 yrs	17 yrs		17 yrs	17 yrs	17 yrs	17 yrs		577
2015	17 yrs	17 yrs	17 yrs	17 yrs		17 yrs	17 yrs	17 yrs	17 yrs		560
2016	17 yrs	17 yrs	17 yrs	17 yrs		17 yrs	17 yrs	17 yrs	17 yrs		535
2017	17 yrs	17 yrs	17 yrs	17 yrs		17 yrs	17 yrs	17 yrs	17 yrs		637

Status: up to wave BI (2018)

In 2006, a new questionnaire on cognitive potential was introduced. Like the Youth Questionnaire, this instrument is aimed at youths who have reached the surveying age of 17 years. In order to keep the Interview at an acceptable length, the standard Individual Questionnaire is now left out for respondents of the Youth Questionnaire. The 2006 data on cognitive potentials was provided for secondary analysis in 2009 (dataset COGDJ).

## 2 Contents and Structure of the Data Set BIOAGE17

From a technical perspective, four different types of questions are asked in the Youth Questionnaire:

**A)** Questions used to complete certain biographical files (BIOIMMIG, BIOPAREN). These questions are identical to questions in the standard Biography Interview. This applies to the topic blocks ‘Origin’ (questions 65<sup>4</sup> to 78) and ‘Childhood and Parents’ House’ (questions 79-87). The corresponding variables are *not* included in BIOAGE17, but combined with biographical information from non-youth new entrants in the files BIOIMMIG and BIOPAREN.

**B)** Questions that are similar to items in the standard Biography Interview, but go further into detail. This applies to the topic blocks ‘Relationships’ (questions 17-20), ‘Free time and Sport’ (questions 21-31) and ‘Education and Career plans’ (questions 32-63). These variables are stored in BIOAGE17. Corresponding Variables obtained from other new sample members (with a standard Biography Interview) are included in the dataset BIOSOC. Depending on the complexity and scope of the analysis, the user might want to combine corresponding data from BIOAGE17 and BIOSOC in order to access all panel members.

**C)** Questions that specifically relate to young persons and therefore have no equivalent in the standard Biography Interview. This applies to the topic blocks ‘Residence’ (questions 1-3), ‘Jobs and Money’ (questions 7, 9-16), ‘Future’ (question 64) and ‘Attitudes and Opinions’ (questions 93-95, 97). These Variables are stored in BIOAGE17 and have no equivalent for other panel entrants in BIOSOC.

**D)** Since 2006, selected time-variant questions from the unanswered regular individual questionnaire (which is not handed out to first time panel respondents from existing panel households, see 1.3) are added to the Youth Questionnaire. This refers to the questions 4-6, 8, 96, 97 and the topic block ‘personality’ (questions 98 to 107). This data is *not* included in BIOAGE17<sup>5</sup>, but stored in an additional dataset \$PAGE17.

---

<sup>4</sup> The question numbers in this section refer to the question number in the Youth Questionnaire 2017.

<sup>5</sup> The first ten items in question 92 are still stored in BIOAGE17, for details see 13.3.

The design of the dataset BIOAGE17 is patterned according to the 2001 Youth Questionnaire. As in the biographical data survey, every youth answers the Youth Questionnaire only once. The data is therefore presented in column form, just as it would be in a cross-sectional dataset. The variable SYEAR makes it possible to quickly identify the year of the survey. The entries to the questions that were only asked in 2000 and not in 2001 are not included in BIOAGE17. The complete dataset from 2000 is provided free of charge upon request. However, all entries from 2000 that are also included in 2001 are contained in BIOAGE17<sup>6</sup>! With the integration of questions from the Individual Questionnaire in 2006, some changes have occurred in the Youth Questionnaire, especially in the numbering of the questions.

Table 2 (at the end of this chapter) lists all of the variables for the dataset BIOAGE17. The first column contains the name of each variable, the second a brief specification of its content, and the third the number of the question as it appears in the Youth Questionnaire distributed in 2000, wave Q. The fourth column lists the corresponding questions in the Youth Questionnaires 2001 to 2005. In the fifth column, the question number from 2006 to 2015 youth questionnaires is noted. The sixth column lists the question number for 2016. The last column lists the corresponding questions in the Youth Questionnaire for the migration samples in 2016.

### 3 Special Features of Some Questions and Variables

The question regarding the support received by youths from their parents (question 20) is based on the Supportive Parenting Scale of Simons et al. (1992)<sup>7</sup>, which was transformed for Germany by Schwarz and Walper (1997)<sup>8</sup>. The instrument used to compile career orientation (question 62) was taken from Kracke (1996)<sup>9</sup>.

Before 2006, problems arose with the question concerning school attendance (question 25 from 2001 to 2005) because of discrepancies between the information from the Youth Questionnaire and the information on the variable “type of general school attended” from the Individual Questionnaire. Since 2006, 17-year-olds no longer receive the Individual Questionnaire, so the question about school type has been integrated into the question on school attendance. For the previous years, the variable was generated using information from the Individual Questionnaire and questions 25 and 45<sup>10</sup> from the Youth Questionnaire.

---

<sup>6</sup> In the event that a question was asked in 2001 but not in 2000, the variable will have the value -3 for the persons who were surveyed in 2000.

<sup>7</sup> Simons, R.L., F.O. Lorenz, R.D. Conger and C.-I. Wu (1992): Support from spouse as mediator and moderator of the disruptive influence of economic strain on parenting. in: *Child Development* 63: 1282-1301.

<sup>8</sup> Schwarz, B. and S. Walper (1997): *Erziehung aus Sicht von Eltern und Kindern. Erste Erfahrungen mit den Instrumenten der 1. Erhebung. Berichte aus der Arbeitsgruppe “Familienentwicklung nach der Trennung” #19/97.* Ludwig-Maximilians-Universität München.

<sup>9</sup> Kracke, B. (1996): *Fragebogen zur Berufsorientierung bei Realschülern.* University of Mannheim, unpublished manuscript.

<sup>10</sup> For 2000 questions 24 and 45.

If the question on school attendance in the Youth Questionnaire is answered with ‘yes’ when at the same time information from the regular Individual Questionnaire indicates that the person does not attend the general school system, or vice versa, a recoding is undertaken. In this case the variable BYSCHBES is changed to the value -3 (-3: Entry deleted after intensive examination). Another problem arises if a person states in the Youth Questionnaire that she attends school but does not specify school type in the Individual Questionnaire. In this case the variable BYSCHBES is given the value -1 (-1: no answer).

In question 59, young people are asked whether they know what career they would like to start. If they give a positive answer (‘yes, with some certainty’, ‘yes, with a lot of certainty’), then they are asked to specify the occupation in plain text. This plain-text entry is coded according to the classification of occupations of the Federal Statistical Office, Germany, (Statistisches Bundesamt), version 2010, and according to the ISCO 2008. Older versions of the classification of occupations of the Federal Statistical Office (version 1992) and of the ISCO (version 1988) are available until 2017. In addition, the values for Ganzeboom’s International Socio-Economic Index of Occupational Status (ISEI), for Treiman’s Standard International Occupational Prestige Scale (SIOPS) for Erikson’s and Goldthorpe’s Class Category (EGP)<sup>11</sup> as well as Wegener’s Magnitude Prestige Scale (MPS)<sup>12</sup> are also given until 2017.

Since 2005 some respondents have a value of -3 in variables BYMUSART, BYMUSMW and BYSPRTMW. This means that they gave more than one answer to the question although only one answer was possible. Because of this, it was not possible to assign a single valid answer.

By extending the questions about personality, we meanwhile ask the questions regarding attitudes about life and the future on a seven-point scale instead of the four-point scale we started with in the earlier version of this battery. From 2006, the variables BYESVERL to BYESENKA are stored with the values 1 (no acceptance) to 7 (total acceptance) and with the values 11 (total acceptance) to 14 (no acceptance) for respondents of previous years. Thus, the normative decision on how to integrate these two scales is up to the user.

A Youth Questionnaire for M3 and M4 was introduced in 2017. In 2018 another refugee sample (M5) was added. BIOAGE17 contains only the corresponding variables for M3 to M5. The additional questions for M3 to M5 are stored in the datasets \$\$school, \$\$school2 and \$\$jugend.

Previous versions of BIOAGE17 contained the identifier of the mother (bymnr) and the father (byvnr) of the respondent. The identifier of the parents are stored in BIOPAREN (mnr and vnr) and can be merged with BIOAGE17.

---

<sup>11</sup> For ISCO 88, SIOPS, ISEI and EGP see Ganzeboom, H.B.G. and D.J. Treiman (1996): Internationally Comparable Measures of Occupational Status for the 1988 International Standard Classification of Occupations. in: Social Science Research 25, 201-239.

<sup>12</sup> Frietsch, R. and H. Wirth (2001): Die Übertragung der Magnitude-Prestigeskala von Wegener auf die Klassifizierung der Berufe. in: ZUMA-Nachrichten, 48, 139-163.

<sup>3</sup> As mentioned in 13.3, for the years 2000 to 2005 the variable BYSCHBES is generated in consideration of information stemming from the personal questionnaire.

<sup>4</sup> The relevant question from the personal questionnaire differs from year to year: for 2001 question 11, for 2002 question 14, for 2003 question 33, for 2004 question 08, and for 2005 question 09.

<sup>5</sup> Additional category since 2006: value 7 “Spanish”.

BYNTFMD1	Last grade in 1. foreign language	33	35	37	45	45	59	81

<sup>6</sup> Only for those who are / were at a school abroad.

<sup>7</sup> Only for those who attended elementary school in Germany.

<sup>8</sup> Students normally receive grades ranging from 1 to 6, whereby 1 is the best and 6 the worst. This system of assigning grades is used up to the 11<sup>th</sup> or 12<sup>th</sup> grade (level II of upper secondary or comprehensive school) depending on the federal state. After that, a new grading system is used. To make the data set more user-friendly, the information given for school grades and the information on points transformed into grades is stored in this variable. Note: No corrections have been made when a person has reported both grades and point scores and when the two types of information do not correctly correspond.

BYKLAUSL	Number of foreign classmates	(43)	43	45	53	53	51	-

<sup>9</sup> From the 11<sup>th</sup> or 12<sup>th</sup> grade on, pupils are awarded points in upper secondary or comprehensive school ranging from 0 to 15, whereby 15 points are the best, 0 points the worst. The link between points and grades is as follows: 0 points: 6; grade of 1 to 3 points: grade of 5; 4 to 6 points: grade of 4; 7 to 9 points: grade of 3; 10 to 12 points: grade of 2; 13 to 15 points: grade of 1.

<sup>10</sup> The subjects German, math and the first foreign language are split up into different levels during the secondary school level I in comprehensive schools. Level A is the highest. The number of levels differs between the federal states.

<sup>11</sup> From the 11<sup>th</sup> or 12<sup>th</sup> grade on, pupils can choose their main subjects. At this stage, German, math and foreign languages can be downgraded from major to minor subjects.
