## REPRESENTATIVE FARMS ECONOMIC OUTLOOK FOR THE PRELIMINARY 2021 FAPRI/AFPC BASELINE

The farm-level economic impacts of the FAPRI Preliminary 2021 Baseline on representative crop and livestock operations are projected in this report, assuming provisions of the 2018 Farm Bill are in effect and continue throughout the 2020-2025 study period. This iteration of the FAPRI Preliminary 2021 Baseline includes impacts of the U.S.-China Phase 1 trade deal along with current assumed impacts associated with the COVID-19 pandemic on agricultural markets. The current representative farm analysis output reflects an evaluation of ARC/PLC program elections for the farms given provisions of the 2018 Farm Bill. Producers are assumed to enroll in the program resulting in the highest ending cash reserves at the end of the projection period; as farm update meetings are completed, adjustments will be made to program elections (if necessary). Full Market Facilitation Program (MFP) payments for 2018 and 2019 were included in this analysis along with the Coronavirus Food Assistance Program (CFAP) payments for 2020 on eligible inventory/production/acres. The analysis was conducted using a whole farm simulation model developed by AFPC with necessary data sourced from:

- Producer panel cooperation to develop economic information to describe and simulate representative crop, livestock, and dairy farms, and
- Projected prices, policy variables, and input inflation rates from the Food and Agricultural Policy Research Institute (FAPRI) Preliminary 2021 Baseline.

The simulations incorporate historical risk faced by farmers for prices and production. This report presents the results of the Preliminary 2021 Baseline in a risk context using selected simulated probabilities and ranges for annual financial measures. The probability of a farm experiencing negative ending cash reserves and the probability of a farm losing real net worth are included as indicators of the cash flow and equity risks facing farms through the year 2025.

### DEFINITIONS OF VARIABLES IN THE SUMMARY TABLES

- **Overall Financial Position, 2020-2025** -- As a means of summarizing the representative farms' economic efficiencies, liquidity positions, and solvency positions, AFPC classifies each farm as being in a good (green), marginal (yellow) or poor (red) position. AFPC defines a farm to be in a good financial position when it has less than a 25 percent chance each of a negative ending cash position and less than a 25 percent chance of losing real net worth through 2025. If the probabilities of these occurrences are between 25 and 50 percent, the farm is classified as marginal. Probabilities greater than 50 percent place the farm in a poor financial position.
- **Receipts** -- 2020-2025 average cash receipts from all farm related sources, including market sales, PLC/ARC payments, marketing loan gains/LDPs, crop insurance indemnities, and other receipts.
- **Payments** -- 2020-2025 average annual PLC or ARC payments and marketing loan gains/LDPs for crop farms along with MFP and CFAP payments.
- **NCFI** -- 2020-2025 average net cash farm income equals average total receipts minus average total cash expenses.
- **Reserve 2025** -- equals total cash on hand at the end of year 2025. Ending cash equals beginning cash reserves plus net cash farm income and interest earned on cash reserves less

principal payments, federal taxes (income and self-employment), state income taxes, family living withdrawals, and actual machinery replacement costs (not depreciation).

- **Net Worth 2025** -- equity equals total assets including land minus total debt from all sources and is reported at the end of 2025.
- **CRNW** -- annualized percentage change in the operator's real net worth from January 1, 2020 through December 31, 2025, after adjusting for inflation.

## EXECUTIVE SUMMARY

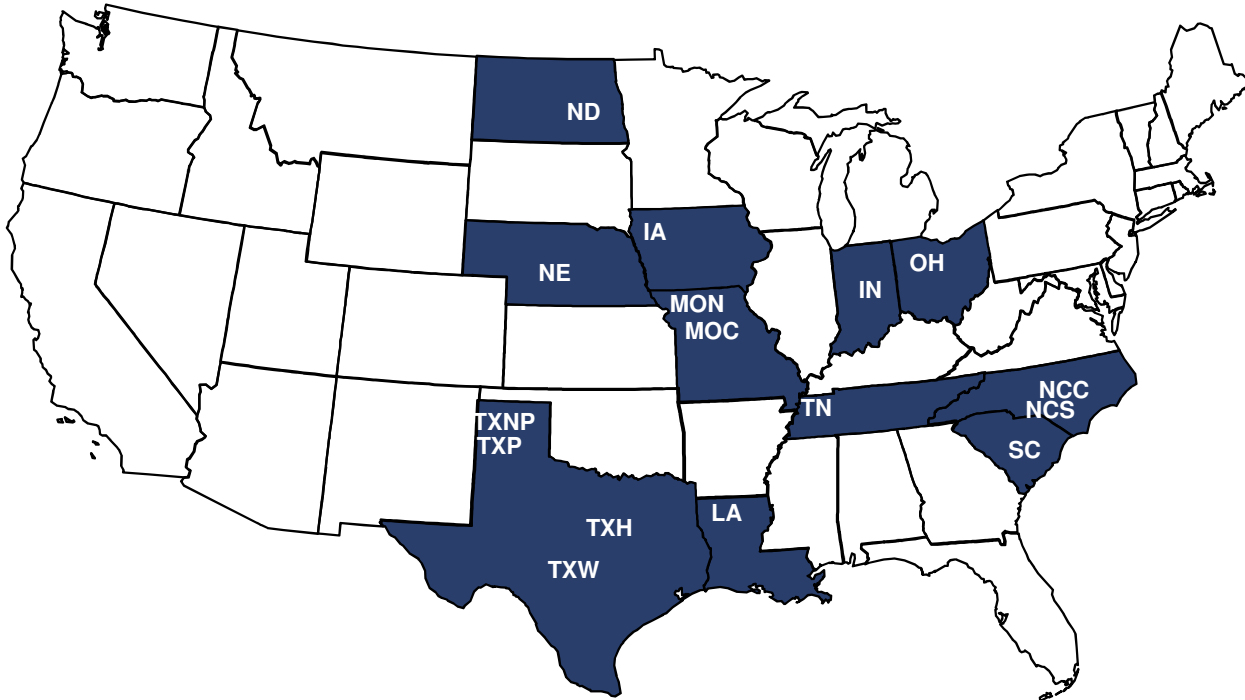

The Agricultural and Food Policy Center (AFPC) at Texas A&M University develops and maintains data to simulate 94 representative crop, dairy, and livestock operations in major production areas in 30 states. The chief purpose of this analysis is to project the economic viability of those farms by region and commodity for 2020 through 2025. The data necessary to simulate the economic activity of these operations are cultivated through ongoing cooperation with panels of agricultural producers in selected states. The Food and Agricultural Policy Research Institute (FAPRI) provides projected prices, policy variables, and input inflation rates in their Preliminary 2021 Baseline.

Under the Preliminary 2021 Baseline, 30 of the 64 crop farms are in good liquidity condition (less than a 25 percent chance of negative ending cash reserves by 2025). Fourteen crop farms have between a 25 percent and a 50 percent likelihood of negative ending cash reserves, and the remaining 20 crop farms have greater than a 50 percent chance of negative ending cash reserves. Additionally, 51 of the 64 crop farms are in a good equity position (less than a 25 percent chance of decreasing real net worth during the study period). Seven crop farms have between a 25 percent and 50 percent likelihood of losing real net worth, and six crop farms have greater than a 50 percent probability of decreasing real net worth by 2025. The following discussion provides an overall evaluation by commodity considering both liquidity and equity measures.

- **FEEDGRAIN FARMS:** Thirteen of the 25 feedgrain farms are in good overall financial condition. Ten farms are classified in marginal condition, and two are in poor condition.
- **WHEAT FARMS:** Six representative wheat farms are classified in good overall financial condition, three are in marginal condition, and two are in poor condition.
- **COTTON FARMS:** Eight of the 13 cotton farms are classified in good condition, four are in marginal condition, and one is in poor condition.
- **RICE FARMS:** Three of the 15 rice farms are projected to be in good financial condition. Six rice farms are projected to be in marginal condition; six are in poor condition.
- **DAIRY FARMS:** Thirteen of the 20 dairies are in good overall financial condition. One of the dairies is classified in marginal condition; six are in poor condition.
- **BEEF CATTLE RANCHES:** Five of the 10 cattle ranches are classified in good financial condition, four are projected to be in marginal condition, and one is in poor condition.

# Representative Farm: Feed Grains

- Overall, thirteen feed grain farms are characterized as good, ten are marginal, and two are in poor condition.
- Five of the twenty-five farms will be under severe cash flow stress; two of these farms also have relatively high likelihoods (greater than a 25 percent chance) of losing real net worth.

**Characteristics of Panel Farms Producing Feed Grains, 2019.**

1 Viability is classified as good (green), moderate (yellow), and poor (red) based on the probabilities:

<25	25-50	>50
-----	-------	-----

2 P(NegativeEnding Cash) is the probability that the farm will have a cash flow deficit. Reported values represent the probabilities for 2020 and 2025.

3 P(Real Net Worth Decline) is the probability that the farm will have a loss in real net worth relative to the beginning net worth. Reported values represent the probabilities for losing real net worth from 2017 to 2020 and from 2017 to 2025.

## Implications of the Preliminary 2021 FAPRI Baseline on the Economic Viability of Representative Farms Primarily Producing Feed Grains and Oilseeds

1 Receipts are average annual total cash receipts including government payments, 2020-2025 (\$1,000)

2 Payments are average annual total government payments, 2020-2025 (\$1,000)

3 NCFI is average annual net cash farm income, 2020-2025 (\$1,000)

4 Reserve 2025 is average ending cash reserves, 2025 (\$1,000)

5 Net Worth 2025 is average nominal ending net worth, 2025 (\$1,000)

6 CRNW is average percentage change in real net worth over 2020-2025 period, (%)

# Representative Farm: Wheat

- Six wheat farms are projected to be in good overall financial condition, three are in marginal condition, and two are in poor condition.
- Four of the eleven wheat farms are expected to feel significant liquidity pressure over the period; two of these four farms also have a greater than 50 percent chance of losing wealth.

## Characteristics of Panel Farms Producing Wheat, 2019.

# Representative Farm: Cotton

## Economic Viability of Representative Farms over the 2020-2025 Period

Farm Name	Overall Ranking		P(Negative Ending Cash)	P(Real Net Worth Declines)
	2020	2025	2020-2025	2020-2025
8/4/1				
TXSP4500			15-42	7-14
TXEC5000			1-9	1-3
TXRP3000			90-96	68-73
TXMC2500			19-52	15-23
TXCB4000			1-32	1-13
TXCB10000			1-2	1-1
TXVC5500			1-1	1-1
ARNC5000			1-1	1-1
TNC3000			1-1	1-1
TNC4050			2-2	1-1
ALC3500			1-1	1-1
GAC2500			1-1	1-1
NCNP1600			92-98	1-20

1 Viability is classified as good (green), moderate (yellow), and poor (red) based on the probabilities:

<25

25-50

>50

2 P(NegativeEnding Cash) is the probability that the farm will have a cash flow deficit. Reported values represent the probabilities for 2020 and 2025.

3 P(Real Net Worth Decline) is the probability that the farm will have a loss in real net worth relative to the beginning net worth. Reported values represent the probabilities for losing real net worth from 2017 to 2020 and from 2017 to 2025.

## Implications of the Preliminary 2021 FAPRI Baseline on the Economic Viability of Representative Farms Primarily Producing Cotton

1 Receipts are average annual total cash receipts including government payments, 2020-2025 (\$1,000)

2 Payments are average annual total government payments, 2020-2025 (\$1,000)

3 NCFI is average annual net cash farm income, 2020-2025 (\$1,000)

4 Reserve 2025 is average ending cash reserves, 2025 (\$1,000)

5 Net Worth 2025 is average nominal ending net worth, 2025 (\$1,000)

6 CRNW is average percentage change in real net worth over 2020-2025 period, (%)

# Representative Farm: Rice

- Three of the fifteen representative rice farms are projected to be in good overall financial condition, six are in marginal condition, and six are in poor condition.
- Twelve of the rice farms are expected to face moderate to severe cash flow problems; eight of those farms also have a greater than 25 percent chance of declining real net worth.

TXSB300	345.71	4.56	127.61	247.45	5,783.42	2.11

1 Receipts are average annual total cash receipts including government payments, 2020-2025 (\$1,000)

2 Payments are average annual total government payments, 2020-2025 (\$1,000)

3 NCFI is average annual net cash farm income, 2020-2025 (\$1,000)

4 Reserve 2025 is average ending cash reserves, 2025 (\$1,000)

5 Net Worth 2025 is average nominal ending net worth, 2025 (\$1,000)

6 CRNW is average percentage change in real net worth over 2020-2025 period, (%)

### **AFPC Briefing Series**

The briefing series is designed to facilitate presentation by AFPC related to requests for specific policy impact analyses. The materials included in this package are intended only as visual support for an oral presentation. The user is cautioned against drawing extraneous conclusions from the material. In most instances, an AFPC Working Paper will follow the briefing series. AFPC welcomes comments and discussions of these results and their implications. Address such comments to:

Agricultural and Food Policy Center  
Department of Agricultural Economics  
Texas A&M University  
College Station, TX 77843-2124

or call 979-845-5913.
