1 Overview

PBRUTTO covers all individuals, who were successfully interviewed or were supposed to be interviewed at least once.

The data set provides gross cross-sectional information over time for all SOEP individuals living in realized households. Unique identifiers are PID SYEAR (PERSNR SYEAR) indicating individual household members over time. The personal IDs PID (PERSNR) and the Case-ID CID, indicating the source household within each (sub-)sample SAMPLE1, are fixed, whereas the household ID HID may vary for individuals over time.

Additional demographic information like SEX, GEBURT_v1/v2 and PNAT_v1/v2 are included in the dataset – indicating the available information at the time of the interview. For time-consistent applications, it is recommended to use the demographics in [PPATH/L].

In the following, the already mentioned information and variables on:

- The respondent's affiliation to the household
- Respondent's interview status, work form and result
- Respondent's penal history
- Respondent's dwelling status
- Additional questionnaires
- Non-respondents

are documented.

2 Identifiers

Variables to identify the respondent in the household hierarchy:

pid – Never Changing Person ID

Individual's unchanging person ID number.

cid – Original Household Number (Case ID)

Case Id - Household Source Identifier. The fixed household source id points to the first SOEP ancestor household for this person. This variable is relevant for sampling information and calculating the weights.

hid – Current Wave HH Number (=HHNRAKT)

Household Id (current) - Identifier for the individual's household (=HHNR) at the time of the interview.

Similarly, a person from Sample B who acquired a new nationality would still remain in his original sample.
