## Correction to: *Econ Struct* (2021) 10:20

<https://doi.org/10.1186/s40008-021-00250-8>

The original version of this article unfortunately contained a mistake. The resolution of Figs. 3–7 was low (Schulte et al. 2021).

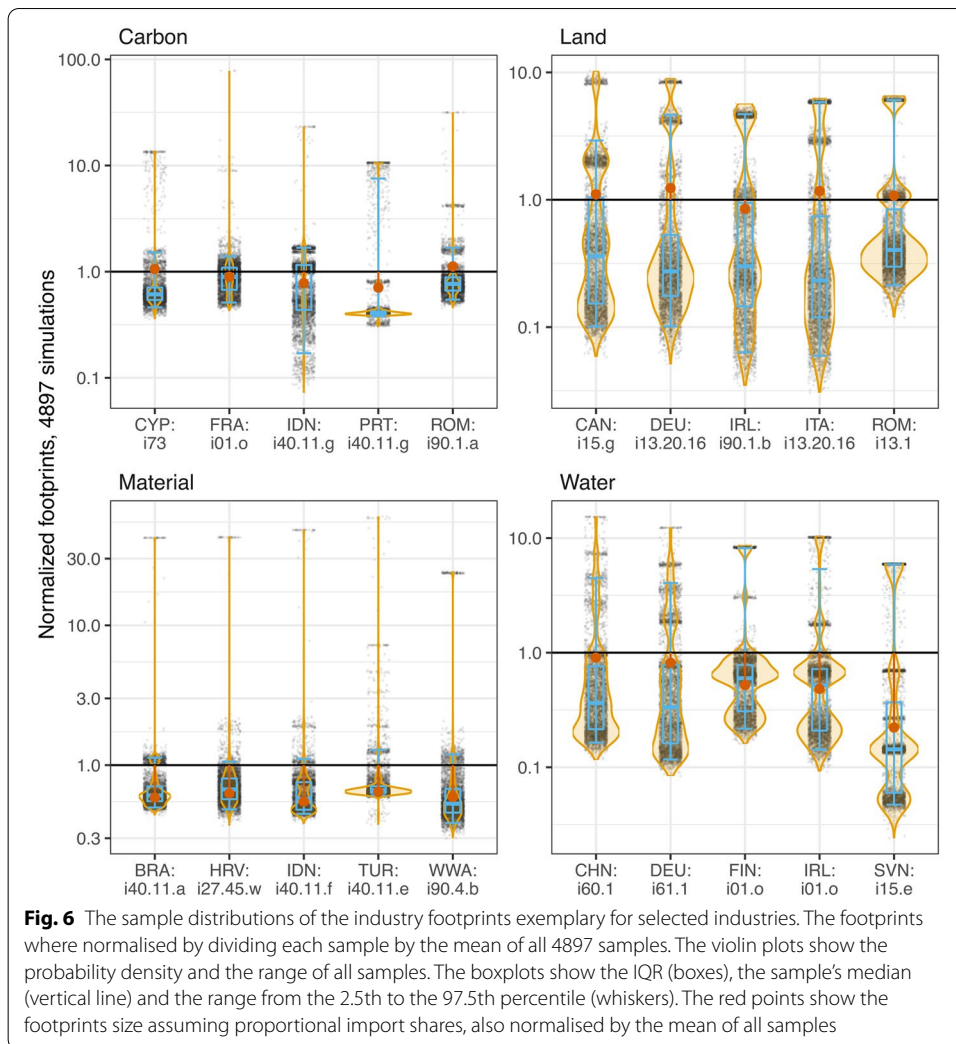

The correction contains the high-resolution figures (Figs. 3, 4, 5, 6 and 7).

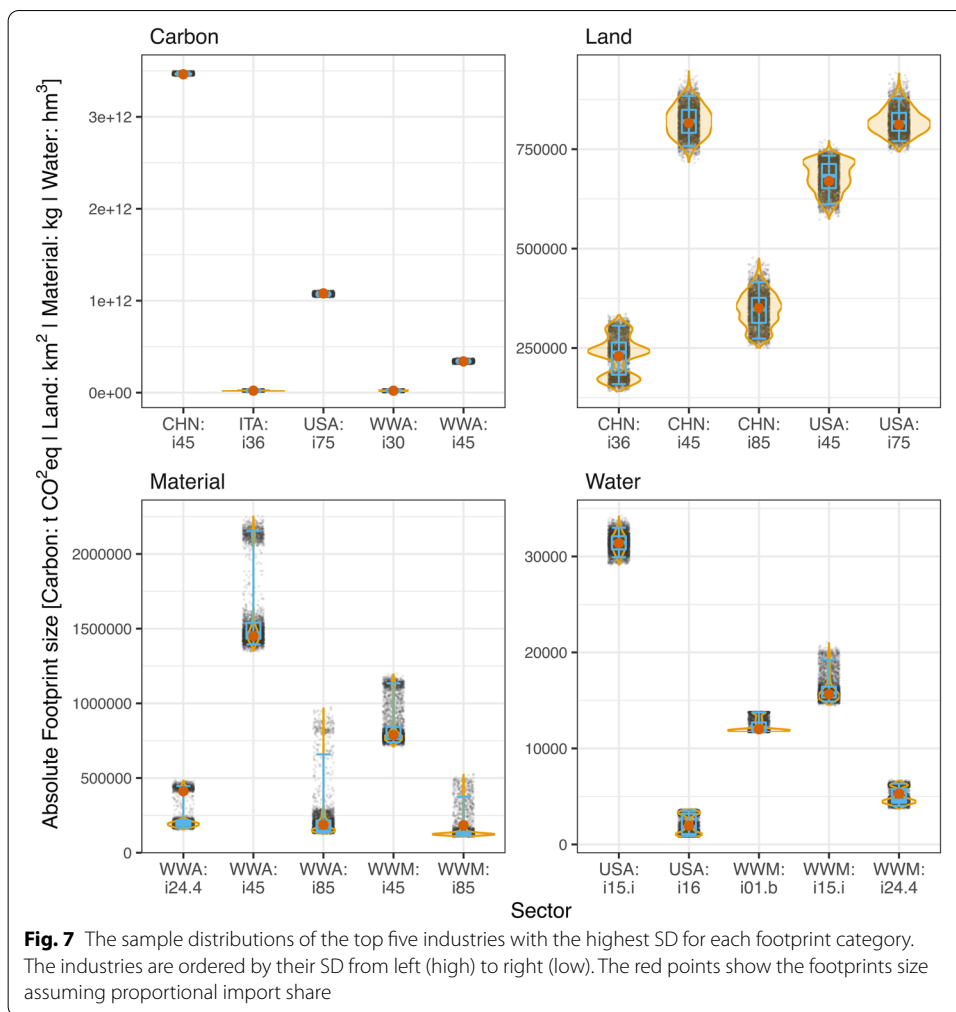

**Fig. 4** The absolute variability of the national footprints expressed as variability in the contribution to the global total impacts. The bars cover the range between the 2.5th and 97.5th percentiles. The grey whiskers extend to the min/max of the sample. The regions are ordered by their SD from top (high) to bottom (low). All regions with a share of less than 1% of the global impact are not included in the figure
