Series D – Variable Descriptions and Coding

## SOEP-IS 2020 – PGEN: Person-Related Status and Generated Variables

SOEP-IS Group

Running since 1984, the German Socio-Economic Panel (SOEP) is a wide-ranging representative longitudinal study of private households, located at the German Institute for Economic Research, DIW Berlin.

The aim of the SOEP Survey Papers Series is to thoroughly document the survey's data collection and data processing. The SOEP Survey Papers is comprised of the following series:

Series A – Survey Instruments (Erhebungsinstrumente)  
Series B – Survey Reports (Methodenberichte)  
Series C – Data Documentation (Datendokumentationen)  
Series D – Variable Descriptions and Coding  
Series E – SOEPmonitors  
Series F – SOEP Newsletters  
Series G – General Issues and Teaching Materials

The SOEP Survey Papers are available at <http://www.diw.de/soepsurveyspapers>

## 1 Overview

Variables in the file pgen documented here are generated mostly from the answers in the personal questionnaire. There is one row for each wave (syear) a person (pid) participated in the survey.

## 2 Variables in file pgen

**cid** – Case-ID, Original Household Number

---

**hid** – Current Wave HH Number

---

**pid** – Never Changing Person ID

---

**syear** – Survey Year

| -6 | [-6] Questionnaire Version With Modified Filtering        | 0     |

This variable is generated from the question on whether a respondent has changed jobs since the beginning of the previous year, which is a central filter variable in the questionnaire.

Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

An alternative variable is PGJOBCH (see below), which is an improved version of PGERWTYP, as it is generated in a longitudinally consistent way and contains an additional category for first-time employed persons.

Respondents from the supplementary samples are not being asked about the information on job change; hence, in the year when these samples enter the SOEP-IS, the majority of the employed persons fall into the category [5] (Employed, no info if change).

#### pgerljob – Working in Occupation Trained for

| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 52304 |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

This variable is designed to offer annual data on all employed persons, indicating whether they are working in the occupation they were trained for.

Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

Because detailed information on working in occupation trained for is not assessed in the Questionnaire of the SOEP Innovation Sample, PGERLJOB is not generated for Sample E (since 2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGERLJOB is coded to “-5” (not contained in questionnaire).

**pgbetr** – Size of the Company

? (from: [soep-is/soep-bip-2020-e/Q213:pgesunt\[\]](#))

? Approximately how many people does the company employ as a whole? This does not refer to a local unit of the company, but to the entire company. (from: [soep-is/soep-is-2020-fgz/Q427:pgesunt\[\]](#))

| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

This variable is designed to offer annual data on company size for all employed persons. Please pay attention to special codes 4, 5, and 8! These codes were necessary due to the differentiation of items for small and medium-sized companies over the years.

Not all employed persons are asked the question on firm size on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

Please also see PGALLBET for a broader categorization of the firm size, which is appropriate for analyses that include all sample years.

Self-employed are not included in this variable. Detailed information about the company size of self-employed is included in the variable PGSTIB.

| -2 | [-2] Does Not Apply                                | 6909  |
| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 52304 |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

This variable is designed to provide annual data on required job training for all employed persons. The variable is generated using questions on required formal education and required on-the-job-training which are categorized into up to seven independent variables with 0/1 coding. Out of these, the highest available level of required training is used for the generation of the status variable.

Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

The code (-2) is assigned to all non-employed persons and also includes persons in occupational training, in occupational retraining programs, and those doing an internship at the time of the survey.

Because detailed information on required training for job is not assessed in the Questionnaire of the SOEP Innovation Sample, PGAUSB is not generated for Sample E (since 2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGAUSB is coded to “-5” (not contained in questionnaire).

#### pgpartz – Partner Identifier

---

|   |                             |       |
|---|-----------------------------|-------|
| 0 | [0] No Partner in Household | 22583 |
| 1 | [1] Spouse                  | 37916 |
| 2 | [2] Partner                 | 6441  |
| 3 | [3] Probably Spouse         | 98    |
| 4 | [4] Probably Partner        | 132   |
| 5 | [5] unklar                  | 1     |

|    |  |     |
|----|--|-----|
| -1 | [-1] No Answer                                     | 419 |
| -2 | [-2] Does Not Apply                                | 39  |
| -3 | [-3] Answer Improbable                             | 0   |
| -4 | [-4] Inadmissible Multiple Answer                  | 0   |
| -5 | [-5] Not Contained In Questionnaire                | 0   |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0   |

Partner identifier have the purpose of clearly defining spouse (married) and partner (unmarried) relationships in SOEP-IS households and thus enabling analyses on the couple level. The variable PGPARTZ generated in this context reveals whether a person in a SOEP-IS household has a partner in that household, and if so, the type of relationship existing between the partners. Relationships with persons outside the SOEP household are not covered by this variable.

To explain the codes:

Code 0 is automatically assigned to all persons living in households in which there is clearly no partnership. These include:

- (a) one-person households
- (b) single-parent households
- (c) household head living together with only one parent (or parent-in-law)

Codes 1 to 4 define these relationships. To assign Codes 1 and 2, the partnership has to be clearly definable from the perspective of both partners. This implies agreement between the codes of the variable STELL (= relationship to head of household in PBRUTTO) pointing to a possible partnership (e.g., the combination 0 (=head of household) and 1 (=spouse of household head)), as well as agreement between the codes for family status in that wave (e.g., married couples both have the Code 1 (=married, living together)). In case of ambiguity, the marital history is taken into account as well. If there are inconsistencies between the answers provided by the two persons, or between data on marital status and relationship to head of household, each person is examined individually within his or her household context. If uncertainty remains, the codes 3 or 4 are assigned.

### pgpartnr – Person ID number of partner

 Please state the first name of your partner. (from: [soep-is/soep-is-2018-f/Q311:ppnr\[\]](#))

|    |  |       |
|----|--|-------|
| -1 | [-1] No Answer                                     | 0     |
| -2 | [-2] Does Not Apply                                | 23041 |
| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 0     |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

Partner indicators have the purpose of clearly defining spouse (married) and partner (unmarried) relationships in SOEP households and thus to make possible analyses on the couple level.

If PGPARTZ is coded 0 or 9, this person has no partner or the partner cannot be identified as such. The variable PGPARTNR is assigned the missing code of “-2” (=does not apply) for these persons.

If PGPARTZ is coded 1, 2, 3 or 4, a partnership was defined and PGPARTNR is then assigned

the value of the unchanging person ID number (=PERSNR) of the partner.

For analyses of partner relationships, this information can be used to clearly link all persons with their respective partners, and all information on both partners can also be stored in a common dataset.

| -1 | [-1] No Answer                                     | 1137  |
| -2 | [-2] Does Not Apply                                | 0     |
| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 0     |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

All respondents in all SOEP subsamples are asked about diplomas/degrees attained for completion of secondary/tertiary education the first time they participate in SOEP.

As the SOEP Innovation Sample does not include a youth questionnaire, since 2012 information usually coming from the youth questionnaire was not included in the generation of PGSBIL.

#### **pgbbil01** – Vocational degree attained

? (from: [soep-is/soep-bip-2020-e/Q164:pab\[\]](#))

? What kind of a degree was that? (from: [soep-is/soep-is-2020/Q279:pab\[\]](#))

|    |  |       |
|----|--|-------|
| 1  | [1] Apprenticeship                                     | 30277 |
| 2  | [2] Vocational School                                  | 6199  |
| 3  | [3] Health Care School                                 | 200   |
| 4  | [4] Technical School                                   | 4069  |
| 5  | [5] Civil Servant Training                             | 1718  |
| 6  | [6] Other Degree                                       | 937   |
| 7  | [7] Completed Vocational Training/Education in Germany | 602   |
| -1 | [-1] No Answer   | 1147  |
| -2 | [-2] Does Not Apply                                    | 22480 |
| -3 | [-3] Answer Improbable                                 | 0     |
| -4 | [-4] Inadmissible Multiple Answer                      | 0     |
| -5 | [-5] Not Contained In Questionnaire                    | 0     |
| -6 | [-6] Questionnaire Version With Modified Filtering     | 0     |

All respondents in all subsamples are asked about vocational degrees attained the first time they participate in SOEP. The categories that originally each constituted individual variables are combined to make them compatible with the annual question about changes in vocational degrees attained, and this data is updated annually.

Since the SOEP Innovation Sample does not include a youth questionnaire, the information usually coming from the youth questionnaire was not included in the generation of PGB-BIL01.

**pgbbil02** – Completed college education

? (from: *soep-is/soep-bip-2020-e/Q167:pab6[]*)

? What type of university degree did you receive? (from: *soep-is/soep-is-2020/Q281:pab6[]*)

|    |  |       |
|----|--|-------|
| 1  | [1] Fachhochschule                                 | 3905  |
| 2  | [2] University, Technical College                  | 7252  |

| 4  | [4] Engineering, Technical School (East)           | 971   |
| 5  | [5] University (East)                              | 850   |
| 6  | [6] graduation, state doctorate                    | 970   |
| -1 | [-1] No Answer                                     | 1147  |
| -2 | [-2] Does Not Apply                                | 52382 |
| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 0     |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

All respondents in all subsamples are asked about completed college education the first time they participate in SOEP. To generate the variable, the different degrees/diplomas for all subsamples are integrated. Category (3) “college abroad” is only defined for persons who completed a foreign-language version of the questionnaire. Generation of the variable entails combining the categories to make them compatible with the annual question about changes in vocational degrees/diplomas attained.

Since the SOEP Innovation Sample does not include a youth questionnaire, the information usually coming from the youth questionnaire was not included in the generation of PGB-BIL02.

**pgbbil03** – No vocational degree

? (from: *soep-is/soep-bip-2020-e/Q174:lab01[]*)

? Have you completed vocational training or studies? (from: *soep-is/soep-is-2020/Q292:lab01[]*)

? Have you completed any vocational training or studies? (from: *soep-is/soep-is-2020-fgz/Q288:lab01[]*)

|    |  |       |
|----|--|-------|
| 1  | [1] No Vocation Degree                             | 9259  |
| 2  | [2] Apprenticeship                                 | 3118  |
| 3  | [3] Studies  | 2774  |
| -1 | [-1] No Answer                                     | 1147  |
| -2 | [-2] Does Not Apply                                | 51331 |
| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 0     |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

In connection with the question about vocational degrees (PGBBIL01 and PGBBIL02), all first-time respondents to all subsamples are explicitly asked whether they (still) do not possess a vocational degree. In the subsequent years, this data is carried forward or updated. The variable has the Missing Value Code -2 (does not apply) if one of the other two variables on vocational degree has a positive value.

Since the SOEP Innovation Sample does not include a youth questionnaire, the information usually coming from the youth questionnaire was not included in the generation of PGB-BIL03.

| -1 | [-1] No Answer                                     | 38    |
| -2 | [-2] Does Not Apply                                | 62347 |
| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 0     |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

As a supplement to the PGSBIL, this variable provides annually updated data on the highest secondary school degree/diploma attained abroad.

Since the SOEP Innovation Sample does not include a youth questionnaire, the information usually coming from the youth questionnaire was not included in the generation of PGSBIL-A.

#### pgbbila – Occupational Training in abroad

|    |   |       |
|----|---|-------|
| 1  | [1] On-The-Job Training                                   | 61    |

| -5 | [-5] Not Contained In Questionnaire                       | 53028 |
| -6 | [-6] Questionnaire Version With Modified Filtering        | 0     |

As a supplement to the variable PGBBIL01, this variable gives (and updates) the highest-level vocational degree attained abroad.

Because detailed information on occupational training abroad is not assessed in the Questionnaire of the SOEP Innovation Sample, PGBBILA is not generated for Sample E (since

2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGBBILA is coded to “-5” (not contained in questionnaire).

### pgsbilo – Secondary school degree/diploma - East Germany

? Where did you last attend school? (from: soep-is/soep-is-2019/Q281:lsab3[28306])

|    |  |       |
|----|--|-------|

| 3  | [3] Abitur, EOS                                    | 2011  |
| 4  | [4] Other  | 126   |
| 5  | [5] Dropout, No School Certificate                 | 49    |
| 6  | [6] Currently In School                            | 0     |
| -1 | [-1] No Answer                                     | 9     |
| -2 | [-2] Does Not Apply                                | 57553 |
| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 0     |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

As a supplement to the variable PGSBIL the highest secondary school degree/diploma in East Germany is provided as a separate variable.

New SOEP respondents are also asked about secondary degrees/diplomas obtained in the former GDR; and for old respondents, the same codes are carried forward.

As SOEP-IS does not include a youth questionnaire, since 2012 information usually coming from the youth questionnaire was not included in the generation of PGSBIL0.

### pgbbilo – Vocational degree attained - East Germany

? What type of vocational training or university degree did you receive? (from: soep-is/soep-is-2019/Q289:lab02=2[28312])

|    |  |       |
|----|--|-------|
| 1  | [1] Vocational Training                            | 5233  |
| 2  | [2] Master Craftsman                               | 654   |
| 3  | [3] Engineering, Technical Degree                  | 1147  |
| 4  | [4] Other Degree                                   | 112   |
| -1 | [-1] No Answer                                     | 0     |
| -2 | [-2] Does Not Apply                                | 59759 |
| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 724   |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

To supplement the variable PGBBIL01 the highest secondary school degree/diploma in East Germany is provided as a separate variable and updated if necessary for 1991. Since 1992 only the West German version has been used for new vocational degrees. For new SOEP respondents, vocational degrees attained in the former GDR are asked as well; for old respondents, the same codes are carried forward. From 2002 on, the questionnaire was expanded and revised, but this led to an operationalization involving more assumptions on the vocational degrees attained in the GDR; (from 2002 on, Code 3 is also listed as the additional category Code 4 in the integrated variables PGBBIL03 if this degree has not been replaced

by a more recently attained, higher-level university or college degree). Since the SOEP-IS does not include a youth questionnaire, the information usually coming from the youth questionnaire was not included in the generation of PGBBILO.

### pgfamstd – Marital status in survey year

? (from: soep-is/soep-bip-2020-e/Q69:pfamst\_n[])

? What is your marital status? (from: soep-is/soep-is-2020/Q145:pfamst\_n[])

|    |  |       |
|----|--|-------|
| 1  | [1] Married  | 38275 |
| 2  | [2] Married, But Separated                         | 1283  |
| 3  | [3] Single   | 15834 |
| 4  | [4] Divorced                                       | 7155  |
| 5  | [5] Widowed  | 4855  |
| 6  | [6] Registered same sex partnership                | 112   |
| 7  | [7] Registered same sex partnership, seperated     | 20    |
| -1 | [-1] No Answer                                     | 60    |
| -2 | [-2] Does Not Apply                                | 0     |
| -3 | [-3] Answer Improbable                             | 35    |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 0     |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

Marital status is describing the institutional status of marriage at the time of the person interview. Marital status is based on information given by the respective person on his or her current relationship as well as on retrospective information about previous relationships asked in the biography questionnaire. For those whose partner was identified within the household, marital status is counter-checked with the information given by the partner. Where contradictions can be found, indication of the person information is compiled if reasonable. If no information is available, the indication by position related to head of household is deferred. Remaining contradictions are solved using information on marriage status when a child was born as well as future reports on a given relationship. Marital status is only available for people, who were interviewed.

Note that the partner indicator PGPARTZ supplied in the PGEN data files as well might not match the information provided in PGFAMSTD in its entirety.

? When did you start working for your current employer? // Month (from: soep-is/soep-is-2020-fgz/Q396:pseitm[])

|    |  |       |
|----|--|-------|
| -1 | [-1] No Answer                                     | 206   |
| -2 | [-2] Does Not Apply                                | 29785 |
| -3 | [-3] Answer Improbable                             | 71    |
| -4 | [-4] Inadmissible Multiple Answer                  | 50    |
| -5 | [-5] Not Contained In Questionnaire                | 48    |
| -6 | [-6] Questionnaire Version With Modified Filtering | 54    |

The variable PGERWZT is designed to offer data on the length of time with the firm at the point in time of the interview for all employed persons. This variable is generated from the respondent's start date with the current employer. In the case of a job change within the firm, the full length of time with the firm is calculated. Hence, the variable describes the length of time with the same firm and not the length of time in the same position.

The variable provides consistent longitudinal information on the length of time with the same employer. Data that show longitudinal inconsistencies are corrected.

1. In case of no job change, the information on the start date with the current employer given in the earliest interview available is treated as dominant and carried forward to the subsequent years.
2. In case of a job change between firms, the information on the start of the current position is used and carried forward to the subsequent years.
3. Up to wave Z (2009), a respondent who starts working again after a period of non-employment is assumed to have returned to the former employer if the indicated start date with the current employer was before the previous interview date. In this case, the start date with the current employer given in the previous interview is treated as dominant. Otherwise, the present information on the start date with the current employer is used and carried forward to the subsequent years. For respondents who are assumed to have returned to their former employer, the full length of time with the firm is calculated. There is no deduction for the time during which the respondent was not employed.

4. Since wave BA (2010), there is a modified answer category in the questionnaire which indicates that a respondent returns to his/her former employer after a period of non-employment. If a respondent indicates to have started working again at a former employer, the present information on the start date with the current employer is used and carried forward to the subsequent years. Unlike before wave BA (2010), the present information is treated as dominant even if the indicated start date with the current employer was before the previous interview date. Hence, the full length of time with the firm is calculated, and there is no deduction for the time during which the respondent was not employed or employed in another firm.
5. The length of time with the firm is also provided for the East German sample since its start in 1990. Due to the massive restructuring of the economy that took place in East Germany after reunification, this variable should be dealt with cautiously in the first transition years.

Both monthly and annual information is used in the variables and rounded off as length of time in years (with months in decimal form). If the month was not available a random month is used.

#### pgtatzt – Actual Weekly Work Time

| -5 [-5] Not Contained In Questionnaire                | 1644  |
| -6 [-6] Questionnaire Version With Modified Filtering | 0     |

This variable is designed to offer annual data on actual weekly working hours (including overtime) for all persons employed at the time of the survey (including the self-employed). The data are obtained by asking respondents how many hours they work on average per week.

For implausible answers (actual weekly working hours of more than 80 per week), we assign the value (-3). The variable is rounded off and gives the number of working hours as a decimal number.

Please also see PGVEBZT and PGUEBSTD.

| -5 [-5] Not Contained In Questionnaire                | 1644  |
| -6 [-6] Questionnaire Version With Modified Filtering | 0     |

This variable is designed to offer annual data on agreed weekly working hours. The variable takes into account only those persons who were in dependent employment (not self-employed) at the time of the survey. Agreed weekly working hours were asked up to 1989 only in full hours, and from 1990 on in three-digit form (counting the first digit after the decimal point).

The value (-2) is assigned to non-employed people, employees without set hours and to self-employed people, including self-employed farmers, freelancers, and other self-employed persons. In 2012, the value (-2) was assigned only to non-employed people and to self-employed people, including self-employed farmers, freelancers, and other self-employed persons. If persons helping out in family businesses report agreed weekly working hours, we assign a non-missing value.

For implausible answers (agreed weekly working time of more than 80 hours per week) we assign the value (-3).

The variable is rounded off and gives the number of working hours as a decimal number. Please also see PGTATZT and PGUEBSTD.

### pguebstd – Overtime per Week

? (from: [soep-is/soep-bip-2020-e/Q217:paz10a\[\]](#))

This variable is designed to offer annual data on overtime per week for all persons in dependent employment at the time of the survey. The data is obtained by asking respondents how many overtime hours they worked in the month before the survey. The number of monthly overtime hours is then converted into weekly overtime by dividing the number given by 4.3. Since PGUEBSTD refers to weekly overtime during the last month, the number may deviate from the difference between average actual weekly working hours and the agreed weekly working hours.

In the year 2012, respondents were not asked about the number of hours of overtime per week. PGUEBSTD was therefore generated using the difference between average actual weekly working hours and agreed weekly working hours.

The value (-2) is assigned to non-employed people, employees without set hours and to self-employed people, including self-employed farmers, freelancers, and other self-employed persons. If persons helping out in family businesses report overtime hours, we assign a non-missing value. For implausible answers (agreed-upon weekly working time or actual weekly working time of more than 80 hours per week AND weekly overtime of more than 10 hours we assign the value (-3).

The variable is rounded down and gives the number of overtime hours as a decimal.

Please also see PGVEBZT and PGTATZT.

| -5 | [-5] Not Contained In Questionnaire                | 0     |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

This variable is based on the annual question on current employment status, combined with additional information on activities of non-working individuals. Since the beginning of the SOEP in the year 1984, the number of values assigned has been based on a large number of highly differentiated answer categories. It is designed to provide consistent longitudinal data on labor force participation across all waves.

PGLFS provides a differentiation between “working” (Code 11-12) and “non-working” (Code 1-10), categories which are constant over all waves. Non-employment is subdivided further in order to make it possible to efficiently apply different labor market concepts in studying the data. To calculate this variable, the variables on employment status, age, maternity leave, second jobs, registration at the employment office, participation in paid work during the past 7 days and training status are used. Code (12) was added in 2000.

For respondents who have multiple status codes and different values for this variable, the following hierarchy was used to determine which of the values would play the determining role (increasing dominance):

- 11 - working
- 1 - non-working without further information
- 2 - non-working, and older than 65
- 3 - non-working, and currently in a training program
- 6 - non-working, and registered unemployed
- 4 - non-working, on maternity leave
- 5 - non-working, in military/community service
- 9 - non-working, but working past 7 days
- 10 - non-working, but regular second job

8 - non-working, but occasional second job

12 - working, but non-working past 7 days

PGLFS supplements the variable PGEMPLST, which differentiates among persons who are employed.

- (1031) Elementary occupations
- (1032) Sales and services elementary occupations
- (1033) Agricultural, fishery, and related laborers
- (1034) Laborers in mining, construction, manufacturing, and transport

This variable is designed to provide annual data on occupational activity for all employed persons according to the International Standard Classification of Occupations ISCO-88. Respondents answer the question on their current occupational title in their own words, and this response is entered into a blank in the questionnaire.

ISCO-88 is a strictly four-digit classification, and this variable is therefore coded in four-digit form. In contrast to the previous version of the classification system, ISCO-68, ISCO-88 does not use blanks if there is no adequate information for specific coding, but uses zeros instead. Thus 4000 stands for an unspecified office job; 2300 stands for teachers and 2000 stands for scientists, both without closer specification. There is no conversion key since the two classifications differ significantly. Hartmann and Schütz (2002) provide detailed information on the conducted occupational coding. This result has been slightly modified to fit to the ISCO-88 version for European Union purposes (ISCO-88(COM)).

Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

In the SOEP-IS, ISCO-88 (pgis88) is released up until 2016 and coded to [-5] afterwards. Starting in 2017, only ISCO-08 scores will be released (see pgis08).

Hartmann/Schütz (2002): *Die Klassifikation der Berufe und der Wirtschaftszweige im Sozioökonomischen Panel. Neuvercodung der Daten 1984–2001. Infratest Sozialforschung, München.*

| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

This variable is designed to provide annual data on occupational activity for all employed persons according to the International Standard Classification of Occupations ISCO-08 (Version of the ILO). Respondents answer the question on their current occupational title in their own words, and this response is entered into a blank in the questionnaire. ISCO-08 is a strictly four-digit classification, and this variable is therefore coded in four-digit form. Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

ISCO-08 was adopted through a resolution of a Tripartite Meeting of Experts on Labour Statistics held in December 2007. This resolution was subsequently endorsed by the Governing Body of the ILO in March 2008.

Sourcelink: <http://www.ilo.org/public/english/bureau/stat/isco/isco08/index.htm>

In the SOEP-IS, ISCO-08 (pgis08) was first implemented in wave 2016 and is coded [-5] in all previous waves.

#### pgisei88 – ISEI-Status following Ganzeboom (based on IS88)

|    |  |       |
|----|--|-------|
| -1 | [-1] No Answer                                     | 294   |
| -2 | [-2] Does Not Apply                                | 17231 |
| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 22134 |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

This variable reflects the Standard International Socio-Economic Index of Occupational Status for all employed persons. The ISEI Index was developed in 1992 by Ganzeboom, De Graaf, Treiman, and De Leew based on information about income, education, and occupation. Technically, ISEI was created by scaling the ISCO-88 classification. The values for the variable range between 16 and 90. In contrast to the prestige scores of Ganzeboom and Treiman (1996) and Wegener (1988), ISEI is a measure of socio-economic status. It is derived from the ISCO-88 code of the current occupation using the Stata ado iskoisei by John Hendrick which itself is based on Harry Ganzeboom's SPSS algorithms. Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

Please also see occupational prestige scores (pgsiops88, pgmps92) and occupational class (pgegp88).

In the SOEP-IS, pgisei88 is released up until 2016 and coded to [-5] afterwards. Starting in 2017, only pgisei08 scores will be released.

Ganzeboom, H. B. G. / De Graaf, P. M. / Treiman, D. J. / De Leew, J. (1992): A Standard International Socio-Economic Index of Occupation Status, In: *Social Science Research* 21: 1-56

#### pgisei08 – ISEI-Status following Ganzeboom (based on IS08)

|    |  |       |
|----|--|-------|
| -1 | [-1] No Answer                                     | 902   |
| -2 | [-2] Does Not Apply                                | 5733  |

This variable gives the occupational prestige score developed by Wegener (1988) for all employed persons. Like the PGSIOPS prestige score, Wegener's prestige scale measures a person's occupational prestige and was developed especially for use in the Federal Republic of Germany. PGMPS is assigned based on the German Federal Statistical Office's occupational classification of 1992 (PGKLAS). The procedure has been documented in Frietsch and Wirth (2001). Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

Please also see occupational prestige scores (pgsiops88), occupational status (pgisei88), and occupational class (pgegp88).

In the SOEP-IS, pgmps92 is released up until 2016 and coded to [-5] afterwards. Starting in 2017, only pgmps08 scores will be released.

| -6 [-6] Questionnaire Version With Modified Filtering | 0     |

The Magnitude-Prestige-Scale (MPS) is a tool for operationalising the social position of occupations in empirical surveys. In contrast to alternative instruments such as the Standard International Occupational Prestige Scale (SIOPS) or the International Socio-economic Index of Occupational Status (ISEI), the MPS is an instrument that was constructed for analyses on the national level only (Christoph, 2005). Starting in SOEP-IS wave 2016, `pgmps08` is derived from ISCO-88 scores that themselves are derived from ISCO-08 scores using the „derivescores“ STATA package (<https://github.com/dirtyhawk/stata-derivescores>). Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

Please also see occupational prestige scores (`pgsiops08`), occupational status (`pgisei08`), and occupational class (`pgcgp08`).

In the SOEP-IS, `pgmps08` was first implemented in wave 2016 and is coded [-5] in all previous waves.

This variable is designed to provide annual data on the industry of economic activity for all employed persons according to the Statistical Classification of Economic Activities in the European Community (Nomenclature des statistiques des activités économiques de la Communauté européenne - NACE). Respondents answer the question in their own words regarding the industry in which they are currently working, and this response is entered into a blank in the questionnaire. In order to facilitate international comparability, the European industry standard classification system is used by Infratest Sozialforschung to recode this information. This recoding has been documented in Hartmann/Schütz 2002.

The codes in NACE Rev.1 also correspond to ISIC Rev.3 (International Standard Classification of All Economic Activities). With the 2001 data distribution, the sector codes formerly used in the SOEP were completely recoded to the NACE classification. Please note that special codes 96-98 as well as 100 were assigned by Infratest Sozialforschung whenever respondents did not provide a more detailed answer.

Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

This variable gives the occupational prestige score index for all employed persons. PGSIOPS is based on ISCO-88 and was developed by Donald Treiman et al. The scale ranges from 6 to 78.

Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

Please also see occupational prestige scores (pgmps92), occupational status (pgisei88), and occupational class (pgegp88).

In the SOEP-IS, pgsiops88 is released up until 2016 and coded to [-5] afterwards. Starting in 2017, only pgsiops08 scores will be released.

This variable gives the occupational prestige score index for all employed persons. PGS-IOPS is based on ISCO-88 and was developed by Donald Treiman et al. The scale ranges

from 6 to 78. Starting in SOEP-IS wave 2016, pgsiops08 is derived from ISCO-88 scores that themselves are derived from ISCO-08 scores using the „derivescores“ STATA package (<https://github.com/dirtyhawk/stata-derivescores>). This recoding is derived from Ganzeboom's SPSS script `iskotrei.sps`. (<http://www.harryganzeboom.nl/isco88/index.htm>). Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

Please also see occupational prestige scores (`pgmps08`), occupational status (`pgisei08`), and occupational class (`pggep08`).

In the SOEP-IS, `pgsiops08` was first implemented in wave 2016 and is coded [-5] in all previous waves.

| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |
| -8 | [-8] Question this year not part of Survey program | 0     |

This variable gives the occupational class for all employed persons. PGEGP is derived from the Standard International Socio-Economic Index of Occupational Status (ISEI). Technically, the variable was created by scaling the ISCO-88 classification. In addition, it is based on information about income, education and occupation. The EGP Index was documented by Ganzeboom/Treiman in 1996 and revised in 2003.

Former versions and waves contained additional categories for unemployed persons (15) and pensioners (18). From wave 2015 on the `egp`-variable has a more standard shape. Information on unemployment and retirement can be found in `PGSTIB` (occupational position) and `PGLFS` (labor force status).

Annual information on the occupational position is used to generate the EGP-categories for the self-employed. In case no information on the number of employees is available, the PGEGP-categories (5) and (6) contain information on the firm size for self-employed persons.

Based on the new classification developed by Ganzeboom/Treiman (2003), several ISCO

values were recoded in PGEGP as follows:

- ISCO 2470 becomes EGP=1.
- ISCO 2500 becomes EGP=2.
- ISCO 4300, 4400, 4500 become EGP=4.
- ISCO 7900 becomes EGP=7.
- ISCO 9910-9990 become EGP=9.

Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

Please also see occupational status (pgisei88) and occupational prestige scores (pgsiops88, pgmps92).

In the SOEP-IS, pgegp88 is released up until 2016 and coded to [-5] afterwards. Starting in 2017, only pgegp08 scores will be released.

| -5 | [-5] Not Contained In Questionnaire                | 45293 |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

This variable gives the occupational class for all employed persons. PGEGP is derived from the Standard International Socio-Economic Index of Occupational Status (ISEI). Technically, the variable was created by scaling the ISCO-88 classification. In addition, it is based on information about income, education and occupation. The EGP Index was documented by Ganzeboom/Treiman in 1996 and revised in 2003. Starting in SOEP-IS wave 2016, pgegp08

is derived from ISCO-88 scores that themselves are derived from ISCO-08 scores using the „derivescores“ STATA package (<https://github.com/dirtyhawk/stata-derivescores>). This version of Goldthorpe's class categories (EGP) is derived from Ganzeboom's SPSS script isko-egp.sps.

Former versions and waves contained additional categories for unemployed persons (15) and pensioners (18). From wave 2015 on the egp-variable has a more standard shape. Information on unemployment and retirement can be found in PGSTIB (occupational position) and PGLFS (labor force status).

Annual information on the occupational position is used to generate the EGP-categories for the self-employed. In case no information on the number of employees is available, the PGEGP-categories (5) and (6) contain information on the firm size for self-employed persons.

Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

Please also see occupational status (pgisei08) and occupational prestige scores (pgsiops08, pgmps08).

In the SOEP-IS, pgegp08 was first implemented in wave 2016 and is coded [-5] in all previous waves.

| 9951 | [9951] Self-employed persons without further specification               | 36    |
| 9961 | [9961] Consultancy, planning professionals without further specification | 18    |
| 9971 | [9971] Other employees without further specification                     | 124   |
| -1   | [-1] No Answer   | 159   |
| -2   | [-2] Does not apply  | 20291 |
| -3   | [-3] Answer improbable   | 0     |
| -4   | [-4] Inadmissible multiple response                                      | 0     |
| -5   | [-5] Not included in this version of the questionnaire                   | 22134 |
| -6   | [-6] Version of questionnaire with modified filtering                    | 0     |
| -8   | [-8] Question this year not part of Survey program                       | 0     |

This variable is designed to provide annual data on job classification for all employed persons according to the classification of the German Federal Statistical Office (StaBuA). Respondents answer the question on their current occupational title in their own words, and this response is entered into a blank in the questionnaire. Due to data protection regulations, this information cannot be provided to data users and was therefore completely recoded by Infratest Sozialforschung in the year 2002. This recoding has been documented in Hartmann/Schütz 2002.

Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

In the SOEP-IS, pgklas92 is released up until 2016 and coded to [-5] afterwards. Starting in 2017, only pgklas10 scores will be released.

The occupational classification of the German Federal Statistical Office differentiates among six main occupational types (see next page):

I KLAS-Codes 0100-0629 Berufe in der Land-, Tier-, Forstwirtschaft und im Gartenbau

II KLAS-Codes 0700-0809 Bergleute, Mineralgewinner

III Fertigungsberufe

IIIa KLAS-Codes 1000-1129 Berufe in der Steinbearbeitung und Baustoffherstellung

IIIb KLAS-Codes 1200-1359 Keramik-, Glasberufe

IIIc KLAS-Codes 1400-1539 Chemie-, Kunststoffberufe

IIId KLAS-Codes 1600-1799 Berufe in der Papierherstellung, -verarbeitung und im Druck

IIIe KLAS-Codes 1800-1859 Berufe in der Holzverarbeitung, Holz- und Flechtwarenherstellung

IIIf KLAS-Codes 1900-2459 Berufe in der Metallerzeugung und -bearbeitung

IIIg KLAS-Codes 2500-3099 Metall-, Maschinenbau- und verwandte Berufe

IIIh KLAS-Codes 3100-3189 Elektroberufe

IIIi KLAS-Codes 3200-3239 MontiererInnen und Metallberufe, a.n.g.

IIIk KLAS-Codes 3300-3619 Textil- und Bekleidungsberufe

IIIl KLAS-Codes 3700-3789 Berufe in der Lederherstellung, Leder- und Fellverarbeitung

IIIIm KLAS-Codes 3900-4359 Ernährungsberufe

IIIn KLAS-Codes 4400-4729 Hoch-, Tiefbauberufe

IIIo KLAS-Codes 4800-4929 Ausbauberufe, PolsterInnen

IIIp KLAS-Codes 5000-5069 Berufe in der Holz- und Kunststoffverarbeitung

IIIq KLAS-Codes 5100-5149 MalerInnen, LackiererInnen und verwandte Berufe

IIIr KLAS-Codes 5200-5239 WarenprüferInnen, VersandfertigmacherInnen

IIIs KLAS-Codes 5300-5319 HilfsarbeiterInnen ohne nähere Tätigkeitsangabe

IIIIt KLAS-Codes 5400-5509 MaschinistInnen und zugehörige Berufe

IV Technische Berufe

IVa KLAS-Codes 6000-6129 IngenieurInnen, ChemikerInnen, PhysikerInnen, MathematikerInnen

IVb KLAS-Codes 6200-6529 TechnikerInnen, Technische Sonderfachkräfte  
 V Dienstleistungsberufe  
 Va KLAS-Codes 6600-6899 Warenkaufleute  
 Vb KLAS-Codes 6900-7069 Dienstleistungskaufleute und zugehörige Berufe  
 Vc KLAS-Codes 7100-7449 Verkehrsberufe  
 Vd KLAS-Codes 7500-7899 Organisations-, Verwaltungs-, Büroberufe  
 Ve KLAS-Codes 7900-8149 Ordnungs- und Sicherheitsberufe  
 Vf KLAS-Codes 8200-8399 Schriftwerkschaffende, -ordnende und künstlerische Berufe  
 Vg KLAS-Codes 8400-8599 Gesundheitsdienstberufe  
 Vh KLAS-Codes 8600-8949 Sozial- und Erziehungsberufe, anderweitig nicht genannte geistes- und sozialwissenschaftliche Berufe  
 Vi KLAS-Codes 9000-9379 Sonstige Dienstleistungsberufe  
 VI KLAS-Codes 9700-9979 Sonstige Arbeitskräfte  
 Because of gaps in the answers provided by respondents, the following “new” codes were created:  
 9711 - Mithelfende Familienangehörige außerhalb der Landwirtschaft, anderweitig nicht genannt  
 9811 - Auszubildende mit (noch) nicht feststehendem Ausbildungs-beruf  
 9821 - Praktikanten/Praktikantinnen, Volontäre/ Volontärinnen mit (noch) nicht feststehendem Beruf  
 9911 - Facharbeiter/innen, ohne nähere Tätigkeitsangabe  
 9921 - Heimarbeiter/innen, ohne nähere Tätigkeitsangabe  
 9931 - Vorarbeiter/innen, Gruppenleiter/innen, ohne nähere Tätigkeitsangabe  
 9971 - Sonstige Arbeitskräfte, ohne nähere Tätigkeitsangabe

### pgautono – Autonomy in occupational activity

**?** In your position at work, do you supervise others? In other words, do people work under your direction? (from: soep-is/soep-is-2019/Q320:pvor1[28340])

|    |  |       |
|----|--|-------|
| 0  | [0] Apprentice                                     | 1388  |
| 1  | [1] Low Autonomy                                   | 3459  |
| 2  | [2] [2/5]  | 8413  |
| 3  | [3] [3/5]  | 14259 |
| 4  | [4] [4/5]  | 8420  |
| 5  | [5] High Autonomy                                  | 1402  |
| -1 | [-1] No Answer                                     | 857   |
| -2 | [-2] Does Not Apply                                | 29431 |
| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 0     |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

This variable gives the occupational autonomy for all employed persons. It offers an alternative to the ISCO-based scales on occupational status (PGISEI), class (PGEGP), or prestige (PGSIOPS). PGAUTONO is the simplest variable based on the scales of “occupational position” in terms of its construction, and strongly correlated with the Treiman Prestige Scale (PGSIOPS).

The basis for the “autonomy in occupational activity” scale is the classification of occupational position. Self-employed persons are categorized according to the size of the company (with the exception of farmers, who are all classified within the same category of autonomy, independent of farm size in hectares). Civil servants are differentiated according to the civil service laws defining each kind of activity and the amount of autonomy connected to it. Workers are differentiated according to their vocational training, and thus categorized hierarchically according to the different tasks they can be expected to carry out and the different amounts of responsibility associated with each task. Similarly, salaried employees are classified according to how differentiated their tasks are and how much responsibility is associated with each.

The value “1” is assigned mainly to manual workers with a low level of status and a low level of autonomy. Group 2 encompasses work in production, services demanding a minimal level of specialization, and farm work. Activities that require completion of the middle track of secondary education and entail a limited amount of responsibility are classified in Group 3. Group 4 includes activities carried out either with or without supervision that require a degree from a college of applied sciences or university, but are not very high in prestige. Managers and freelance academics are both placed in Group 5 (highest autonomy). Depending on the number of employees, self-employed are categorized in Group 3, Group 4, or Group 5.

Hoffmeyer-Zlotnik, Jürgen H.P., and Alfons J. Geis (2003) *Berufs-klassifikation und Messung des beruflichen Status/ Prestige*. In: ZUMA-Nachrichten 52, Jg. 27, Mai 2003. pp. 125-138.

| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

To make the educational degrees and diplomas attained in different countries comparable, for all respondents an educational variable (PGISCED) is generated retroactively using the international classification scheme ISCED-1997 (International Standard Classification of Education). It creates the highest degree/diploma attained, taking into account degrees and diplomas attained in both general schooling and in vocational and university education. Here the higher-level vocational and university override lower-level school diplomas. Persons who, for example, have no values for the variables on secondary school degrees/diplomas but state that they have a university degree are placed in the highest ISCED category. Please note that, due to a lack of more detailed information on tertiary degrees – in particular on doctoral degrees – we include all tertiary degrees in our ISCED category 6. Thus, the ISCED variable provided here is not comparable one-to-one with the ISCED levels as defined by the OECD, since we have included the original ISCED level 5A in our ISCED category 6. See below for more details.

Since the SOEP-IS does not include a youth questionnaire, the information usually coming from the youth questionnaire was not included in the generation of PGBBILA. Furthermore, since the year 2012, input information from PGBBILA is not being used as PGBBILA itself is not being generated.

OECD (1999): *Classifying Educational Programmes: Manual for ISCED-97 Implementation in OECD Countries*. Paris 1999.

As an alternative to PGISCED, a second educational variable is generated (PGCASMIN) that also enables comparison with international educational degrees/diplomas. Based on the modified CASMIN classification scheme (Comparative Analysis of Social Mobility in Industrial

Nations), this variable has been computed retroactively from 1984 on for all respondents. Taken into account are both secondary-level and university/college-level degrees and diplomas. As with PGISCED, the higher-level occupational degrees override the lower-level secondary school degrees.

The original version is described in: König, W./Lüttinger, P./Müller, W. (1988): *A Comparative Analysis of the Development and Structure of Educational Systems. Methodological Foundations and the Construction of a Comparative Educational Scale*. CASMIN Working Paper No. 12. Mannheim: Universität Mannheim. For the modified version see: Brauns, H./Steinmann, (1999): *Educational Reform in France, West-Germany and the United Kingdom: Updating the CASMIN Educational Classification*. In: ZUMA Nachrichten, Jg. 23, H. 44, pp. 7-44.

| -6  | [-6] Questionnaire Version With Modified Filtering | 0     |

The variable represents a compilation of all relevant information on current occupational position. It is generated by combining information on “occupational group”, “unemployed

(yes/no)", "military/community service", "in education (yes/no)", and "pensioner". A hierarchical scheme is used to determine which data is given precedence when a variety of divergent information exists (increasing dominance):

- 10 – not employed
- 13 – pensioner
- 11 – currently in education
- 15 – military / community service
- 12 – registered unemployed
- 110-150 - apprentice
- 410-440 – self-employed
- 210-250 – manual laborer
- 510-550 - employee
- 610-640 – civil service

In PGSTIB, non-working persons are only assigned to the category (13) "pensioner" if they are recipients of retirement pension or if they are recipients of widow's pension AND are older than 60 years.

The variable PGLABGRO represents the current gross labor income of all SOEP respondents who are employed in each respective wave. The variable contains both generated and imputed values for Sample E (until 2011) & Sample I (until 2010); since then, the variable contains only generated values for all samples. The imputed values are available in the variables PGI1-PGI5LABGRO. Income details are consistently provided in euros for all waves. Item nonresponse is imputed in a twostage procedure: first, with the “Row-and-Column” method of Little und Su (1989) using individual longitudinal data as well as cross-sectional trend data (cf. Joachim R. Frick and Markus M. Grabka (2005): Item-Non-Response on Income Questions in Panel surveys: Incidence, Imputation and the Impact on the Income Distribution. Allgemeines Statistisches Archiv (ASTA) 89, 49-61). Alternatively, if no individual longitudinal information is available, we base the imputation on a regression using different Mincer covariates, also taking into account current net labor income. If both types of income information are lacking, first we impute current net labor income and then current gross labor income. Imputed values are flagged (PGIMPGRO).

Multiple imputation procedures provide a way to deal with missing values on the variable current net labor income in Euros by using information about determinants of the household income and replacing item-nonresponse with multiply imputed data. Five imputations are available within the \$PGEN datasets: the variables pgi1labnet-pgi5labnet. The imputations were calculated using the method of chained equations predictive mean matching in STATA. The procedures were written by Patrick Royston (see Royston 2004, 2005a, 2005b, 2007, 2009) and Ian White (see White, Daniel and Royston 2010; White, Royston and Wood 2011). Predicted mean matching means that for each missing observation on income, the particular non-missing observation is found whose prediction on observed data is closest. This closest observation is used to impute the missing value. The most important variable

for modelling the current net labor income is the gross labor income of the previous year. A complete list of the variables used for modelling is available upon request. The missing observations were assumed to be missing at random. We set the number of imputations  $m=5$  and get 5 multiple imputed values for `pglabnet`. The number of iterations carried out in each prediction model was specified to be 2000. Sample E&I and the supplementary sample S1 were imputed separately.

Analysing multiply imputed data: For analysing multiple imputed data, one does not necessarily need special methods; however, such tools exist and simplify the use of multiply imputed data. Below is given a short overview of some useful tools for various statistical packages. These tools estimate the parameters of a regression model by combining the estimates across the several replicates of imputation. Point estimates from multiple imputations are then the arithmetic mean of the several point estimates obtained from analysis on each imputed data. Standard errors are obtained by combining the average of the squared standard errors of the several ( $m$ ) estimates with the within-and between-imputation variance.

- STATA provides a built-in functionality called `mi`.
- Within SAS, PROC MIANALYZE combines the results of analyses on the data sets.
- IVEware is a set of routines that can be launched from SAS or run independently using data from many sources. You can use the IVEware module `regress` to perform multiple imputation analysis.

Five imputations are available within the \$PGEN datasets: the variables `pgi1labnet`–`pgi5labnet`. The imputations were calculated using the method of chained equations predictive mean matching in STATA. The procedures were written by Patrick Royston (see Royston 2004, 2005a, 2005b, 2007, 2009) and Ian White (see White, Daniel and Royston 2010; White, Royston and Wood 2011). Predicted mean matching means that for each missing observation on income, the particular non-missing observation is found whose prediction on observed data is closest. This closest observation is used to impute the missing value. The most important variable for modelling the current net labor income is the gross labor income of the previous year. A complete list of the variables used for modelling is available upon request. The missing observations were assumed to be missing at random. We set the number of imputations  $m=5$  and get 5 multiple imputed values for `pglabnet`. The number of iterations carried out in each

prediction model was specified to be 2000. Sample E&I and the supplementary sample S1 were imputed separately.

Analysing multiply imputed data: For analysing multiple imputed data, one does not necessarily need special methods; however, such tools exist and simplify the use of multiply imputed data. Below is given a short overview of some useful tools for various statistical packages. These tools estimate the parameters of a regression model by combining the estimates across the several replicates of imputation. Point estimates from multiple imputations are then the arithmetic mean of the several point estimates obtained from analysis on each imputed data. Standard errors are obtained by combining the average of the squared standard errors of the several (m) estimates with the within-and between-imputation variance.

- STATA provides a built-in functionality called mi.
- Within SAS, PROC MIANALYZE combines the results of analyses on the data sets.
- IVEware is a set of routines that can be launched from SAS or run independently using data from many sources. You can use the IVEware module regress to perform multiple imputation analysis.

Multiple imputation procedures provide a way to deal with missing values on the variable current net labor income in Euros by using information about determinants of the household income and replacing item-nonresponse with multiply imputed data. Five imputations are available within the \$PGEN datasets: the variables pgi1labnet-pgi5labnet. The imputations were calculated using the method of chained equations predictive mean matching in STATA. The procedures were written by Patrick Royston (see Royston 2004, 2005a, 2005b, 2007, 2009) and Ian White (see White, Daniel and Royston 2010; White, Royston and Wood 2011). Predicted mean matching means that for each missing observation on income, the particular non-missing observation is found whose prediction on observed data is closest. This closest observation is used to impute the missing value. The most important variable for modelling the current net labor income is the gross labor income of the previous year. A complete list of the variables used for modelling is available upon request. The missing observations were assumed to be missing at random. We set the number of imputations m=5 and get 5 multiple imputed values for pglabnet. The number of iterations carried out in each prediction model was specified to be 2000. Sample E&I and the supplementary sample S1 were imputed separately.

Analysing multiply imputed data: For analysing multiple imputed data, one does not necessarily need special methods; however, such tools exist and simplify the use of multiply

imputed data. Below is given a short overview of some useful tools for various statistical packages. These tools estimate the parameters of a regression model by combining the estimates across the several replicates of imputation. Point estimates from multiple imputations are then the arithmetic mean of the several point estimates obtained from analysis on each imputed data. The variable PGLABNET represents the current net labor income of all persons in SOEP working in the respective wave. The variable contains both generated and imputed values for Sample E (until 2011) & Sample I (until 2010); since then, the variable contains only generated values for all samples. The imputed values are available in the variables PGI1-PGI5LABNET. Income details are consistently provided in euros for all waves. The imputation of item non-response takes place in a two-stage procedure: first, with the “Row-and-Column” method of Little und Su (1989) using individual longitudinal data as well as cross-sectional trend data (cf. Joachim R. Frick and Markus M. Grabka (2005): Item-Non-Response on Income Ques-

tions in Panel surveys: Incidence, Imputation and the Impact on the Income Distribution. *Allgemeines Statistisches Archiv (ASTA)* 89, 49-61). Alternatively, if no individual longitudinal information is available, we base the imputation on a regression using different Mincer covariates, also taking into account current gross labor income. If both types of income information are lacking, first we impute current gross labor income and then current net labor income. Imputed values are flagged (PGIMPNET).

Multiple imputation procedures provide a way to deal with missing values on the variable current net labor income in Euros by using information about determinants of the household income and replacing item-nonresponse with multiply imputed data. Five imputations are available within the \$PGEN datasets: the variables pgi1labnet-pgi5labnet. The imputations were calculated using the method of chained equations predictive mean matching in STATA. The procedures were written by Patrick Royston (see Royston 2004, 2005a, 2005b, 2007, 2009) and Ian White (see White, Daniel and Royston 2010; White, Royston and Wood 2011). Predicted mean matching means that for each missing observation on income, the particular non-missing observation is found whose prediction on observed data is closest. This closest observation is used to impute the missing value. The most important variable for modelling the current net labor income is the gross labor income of the previous year. A complete list of the variables used for modelling is available upon request. The missing observations were assumed to be missing at random. We set the number of imputations  $m=5$  and get 5 multiple imputed values for pgi1labnet. The number of iterations carried out in each prediction model was specified to be 2000. Sample E&I and the supplementary sample S1 were imputed separately.

Analysing multiply imputed data: For analysing multiple imputed data, one does not necessarily need special methods; however, such tools exist and simplify the use of multiply imputed data. Below is given a short overview of some useful tools for various statistical packages. These tools estimate the parameters of a regression model by combining the estimates across the several replicates of imputation. Point estimates from multiple imputations are then the arithmetic mean of the several point estimates obtained from analysis on each imputed data. Standard errors are obtained by combining the average of the squared standard errors of the several ( $m$ ) estimates with the within-and between-imputation variance.

- STATA provides a built-in functionality called *mi*.
- Within SAS, PROC MIANALYZE combines the results of analyses on the data sets.
- IVEware is a set of routines that can be launched from SAS or run independently using data from many sources. You can use the IVEware module *regress* to perform multiple imputation analysis.

| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

This variable is designed to provide annual data on the core size category of the company for all employed persons.

Not all employed persons are asked the relevant input questions on an annual basis. Only those employed persons who changed jobs and first-time respondents were asked to provide up-to-date information.

Self-employed are not included in this variable. Information about the company size is included in the variable `pgstib`.

### **pgemplst** – Employment status

? (from: [soep-is/soep-bip-2020-e/Q188:perw\[\]](#))

? Are you currently employed? Which one of the following applies to your status? (from: [soep-is/soep-is-2020/Q306:perw\[\]](#))

? Are you currently employed? Which one of the following applies best to your status? (from: [soep-is/soep-is-2020-fgz/Q302:perw\[\]](#))

|    |  |       |

| -5 | [-5] Not Contained In Questionnaire                | 0     |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

This variable is generated from the annual question on current employment status, which has a central filter function in the questionnaire to separate employed people from non-employed people for further questions. It is designed to provide consistent longitudinal data on employment status across all waves.

The category “not employed” comprises non-working individuals, those in military/community service, those on maternity leave, and employed persons in a phased retirement scheme (*Altersteilzeit*) whose current actual working hours are zero.

PGEMPLST supplements the variable `PGLFS`, which differentiates among persons who are not employed.

| -2 [-2] Does Not Apply                                | 0     |
| -3 [-3] Answer Improbable                             | 0     |
| -4 [-4] Inadmissible Multiple Answer                  | 0     |
| -5 [-5] Not Contained In Questionnaire                | 52304 |
| -6 [-6] Questionnaire Version With Modified Filtering | 0     |

This variable reflects the total length of full-time employment in the respondent's career. The variable is created by combining monthly information on employment status from the calendar dataset ARTKALEN (which provides monthly information on activity status since an individual entered the SOEP) and annual information from the biographical dataset PBIOSPE (which provides information on activity status over the individual's life course). PGEXPFT uses calendar information up to December of the previous year and gives the length of time in years with months in decimal form.

If there is no monthly calendar data available in a given year of a respondent's career, the annual data from PBIOSPE is used for that year. In the most current wave the variable only uses up-to-date information from the newly answered Biography Questionnaires. If the year in which a spell started and ended is the same, and if there is no monthly data, a spell of 0.5 years is assumed.

Persons whose life course has been observed completely but with no spell of full-time employment are assigned the code (0). The code (-1) is assigned to all persons whose life course has not been observed completely. Persons with inconsistent information receive a (-3).

Because detailed information on the activity status of the respondents is not assessed in the

Questionnaire of the SOEP Innovation Sample, PGEXPFT is not generated for Sample E (since 2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGEXPFT is coded to “-5” (not contained in questionnaire). Please also see PGEXPPT and PGEXPUE.

| -4 [-4] Inadmissible Multiple Answer                  | 0     |
| -5 [-5] Not Contained In Questionnaire                | 52304 |
| -6 [-6] Questionnaire Version With Modified Filtering | 0     |

This variable reflects the total length of part-time employment in the respondent's career. The variable is created by combining monthly information on employment status from the calendar dataset ARTKALEN (which provides monthly information on activity status since an individual entered the SOEP) and annual information from the biographical dataset PBIOSPE (which provides information on activity status over the life course of an individual). PGEXPPT uses calendar information up to December of the previous year and gives the length of time in years with months in decimal form.

If there is no monthly calendar data available in a given year of a respondent's career, the annual data from PBIOSPE is used for that year. In the most current wave the variable only uses up-to-date information from the newly answered Biography Questionnaires. If the year in which a spell started and ended is the same, and if there is no monthly data, a spell of 0.5

years is assumed.

Persons whose life course has been observed completely but with no spell of full-time employment are assigned the code (0). The code (-1) is assigned to all persons whose life course has not been observed completely. Persons with inconsistent information receive a (-3).

Because detailed information on the activity status of the respondents is not assessed in the Questionnaire of the SOEP Innovation Sample, PGEXPPT is not generated for Sample E (since 2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGEXPPT is coded to “-5” (not contained in questionnaire).

| -2 [-2] Does Not Apply                                | 0     |
| -3 [-3] Answer Improbable                             | 0     |
| -4 [-4] Inadmissible Multiple Answer                  | 0     |
| -5 [-5] Not Contained In Questionnaire                | 52304 |
| -6 [-6] Questionnaire Version With Modified Filtering | 0     |

This variable reflects the total length of unemployment in the respondent's career. The variable is created by combining monthly information on employment status from the calendar dataset ARTKALEN (which provides monthly information on activity status since an individual entered the SOEP) and annual information from the biographical dataset PBIOSPE (which provides information on activity status over the life course of an individual). PGEXPUE uses calendar information up to December of the previous year and gives the length of

time in years with months in decimal form.

If there is no monthly calendar data available on a given year in a respondent's career, the annual data from PBIOSPE is used for that year. In the most current wave the variable only uses up-to-date information from the newly answered Biography Questionnaires. If the year in which a spell started and ended is the same, and if there is no monthly data, a spell of 0.5 years is assumed.

Persons whose life course has been observed completely but with no spell of full-time employment are assigned the code (0). The code (-1) is assigned to all persons whose life course has not been observed completely. Persons with inconsistent information receive a (-3).

Because detailed information on the activity status of the respondents is not assessed in the Questionnaire of the SOEP Innovation Sample, PGEXPUE is not generated for Sample E (since 2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGEXPUE is coded to "-5" (not contained in questionnaire).

Please also see PGEXPFT.

| -2 | [-2] Does Not Apply                                | 0     |
| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 0     |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

This variable indicates a change of job since the previous interview for respondents with a follow-up interview, whereas for first-time respondents, the information refers to a change of job since the beginning of the previous year.

PGJOBCH is generated based on the central filter variable, which indicates whether a respondent has changed jobs since the beginning of the previous year. Information on the date of job change is then combined with interview month of the previous year's interview to identify whether a new job change has taken place since the previous interview.

Hence, PGJOBCH is a modified version of the variable PGERWTYP which indicates whether a respondent has changed jobs since the beginning of the previous year. Unlike PGERWTYP, the variable is calculated for all waves, and the codes are assigned independently of the respondent being a first-time or follow-up respondent.

In addition to PGERWTYP, the variable is also designed to identify respondents who have entered employment for the first time.

In addition to PGERWTYP, the variable is designed to provide consistent longitudinal information on job changes. The PGJOBCH variable is generated by correcting the original job change information in various ways:

1. We check whether the job changes stated by a respondent in two consecutive interviews refer to one and the same job change. The date of the job change and the interview month are used to correct double entries.
2. If the respondent indicates a job change with a date before the previous interview but did not state a job change in the previous interview, this is coded as a job change in the current interview.
3. If a respondent indicates no job change and was not employed at the time of the previous interview, this is coded as “no job change” despite the seeming implausibility, since there are possible explanations how this information could be plausible, e.g. if there were short-term employment spells between two interview dates.
4. Respondents can be “first-time employed” only once. If a respondent states being “first-time employed” for a second time, this is coded as “employed, with change”.

| -6  | [-6] Questionnaire Version With Modified Filtering  | 0     |

The variable is designed to provide information on the field of education of tertiary degrees which adds details to the information recorded in the variable PGBBIL02. While the latter variable records if a person holds a degree PGFIELD contains more detailed information on the type of the degree. The data of the generated variable PGFIELD stem from two sources: 1. Person questionnaire: Each year since 1985 respondents are asked if they have left education since the beginning of the year prior to the survey and which degrees they have obtained. This part of the questionnaire contains an open question on the type and the field of newly obtained tertiary degrees. This information is coded and used for the generation of the variables PGFIELD. 2. Biography questionnaire: Since 2001 similar information is collected from respondents who fill in the biography questionnaire (usually during the first two years of participation in the panel). In contrast to the information from the person questionnaire the questions do not refer to currently obtained degrees but to degrees obtained during the time before being part of the SOEP sample.

In the variable PGFIELD we combine these two types of information. Each year the variable contains the most recently collected information.

If you want to take into account that a person holds two degrees you have to combine the information from all available years. However, only a minority of the population holds more than one tertiary degree. In very few cases we encounter the problem that a respondent provides information on two different degrees in one survey year. This only happens in years when respondents fill in the person as well as the biography questionnaire. In these cases we prioritize the information from the person questionnaire as it refers to the current situation while the biography questionnaire contains retrospective information. Furthermore, there are cases who report an applied university degree and a university degree in the biography questionnaire. In these cases, the variable contains information on the university degree only.

The variable is coded according to the classification on fields of education ("Fächergruppen") provided by the Statistisches Bundesamt (2009). Until 2009 data from the person questionnaire were coded using an earlier version of this classification (1982). In the variable PGFIELD we recoded the original values. As the newer version is more precise this could be done with hardly any loss of information. Some categories are collapsed. Category 3 is coded as 2 (no distinction between catholic and protestant theology), 14 as 13, 17 as 16, 24 as 23, 25 as 26 and 48 as 49.

Because detailed information on the field of tertiary education is not assessed in the Questionnaire of the SOEP Innovation Sample, PGFIELD is not generated for Sample E (since 2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGFIELD is coded to "-5" (not contained in questionnaire).

| 44 | [44] Other Degree  | 8     |
| 98 | [98] Not categorizable   | 98    |
| -1 | [-1] No Answer   | 120   |
| -2 | [-2] Does Not Apply  | 14582 |
| -3 | [-3] Answer Improbable   | 1     |
| -4 | [-4] Inadmissible Multiple Answer  | 0     |
| -5 | [-5] Not Contained In Questionnaire  | 52304 |
| -6 | [-6] Questionnaire Version With Modified Filtering                               | 0     |

The variable is designed to provide information on the type of tertiary degree (e.g., Diploma, Bachelor, Master) which adds details to the information recorded in the variable PGBBIL02. While the latter variable records if a person holds a degree PGDEGREE contains more detailed information on the type of the degree. The data of the generated variable PGDEGREE stem from two sources: 1. Person questionnaire: Each year since 1985 respondents are asked if they have left education since the beginning of the year prior to the survey and which degrees they have obtained. This part of the questionnaire contains an open question on the type and the field of newly obtained tertiary degrees. This information is coded and used for the generation of the variables PGDEGREE. 2. Biography questionnaire: Since 2001 similar information is collected from respondents who fill in the biography questionnaire (usually during the first two years of participation in the panel). In contrast to the information from the person questionnaire the questions do not refer to currently obtained degrees but to degrees obtained during the time before being part of the SOEP sample.

In the variable PGDEGREE we combine these two types of information. However, since the retrospective information was not collected before 2001 the variable covers until 2000 only persons for whom we have prospectively observed the end of study. This explains why the number of valid observations is rather small in these years.

Each year the variable contains the most recently collected information. If you want to take into account that a person holds two degrees you have to combine the information from all available years. However, only a minority of the population holds more than one tertiary degree. In very few cases we encounter the problem that a respondent provides information on two different degrees in one survey year. This only happens in years when respondents fill in the person as well as the biography questionnaire. In these cases we prioritize the information from the person questionnaire as it refers to the current situation while the biography questionnaire contains retrospective information. Furthermore, there are cases who report an applied university degree and a university degree in the biography questionnaire. In these cases, the variables contain information on the university degree only.

The variable is coded according to a slightly collapsed version of the classification on types of tertiary degrees ("Prüfungsgruppen und Abschlussprüfungen") provided by the Statistisches Bundesamt (2009). Since 2010 the data were coded according to the classification presented here. In the variable PGDEGREE we recoded the original values from years 2009 and earlier.

As the newer version is more precise this could be done with hardly any loss of information. Some categories are collapsed. Category 16 was mostly likely coded as 15 in earlier years, 34 as 35 and 43 as 44. The original values of the data collected from the person questionnaire of 2009 are stored in the respective variables in the dataset P.

Because detailed information on the type of tertiary degree is not assessed in the Questionnaire of the SOEP Innovation Sample, PGDEGREE is not generated for Sample E (since 2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGDEGREE is coded to “-5” (not contained in questionnaire).

| 99  | [99] Workers, responsibilities not specified                                  | 11    |
| -1  | [-1] No Answer  | 13    |
| -2  | [-2] Does Not Apply   | 13625 |
| -3  | [-3] Answer Improbable  | 0     |
| -4  | [-4] Inadmissible Multiple Answer   | 0     |
| -5  | [-5] Not Contained In Questionnaire   | 52304 |
| -6  | [-6] Questionnaire Version With Modified Filtering                            | 0     |

The variable is designed to provide information on the occupation of vocational training which adds details to the information recorded in the variable PGBBIL01. In addition to the variable PGTRAINA we provide the variables PGTRAINB, PGTRAINC and PGTRAIND. All these variables record the occupation of vocational training. The difference is that PGTRAINA contains information on vocational training within the German dual system which com-

bines firm-based and school-based training (apprenticeship). PGTRAINB is designed to provide information on the occupation of full-time school based vocational training. PGTRAINC contains information on level vocational training (e.g., Meister, Techniker). PGTRAIND is designed to provide information on the occupation of civil servant training (“Beamtenausbildung”). We describe in brief detail the construction of the variable PGTRAINA. PGTRAINB, PGTRAINC and PGTRAIND are constructed in an analogous manner.

The data of the generated variable PGTRAINA stem from two sources: 1. Person questionnaire: Each year since 1985 respondents are asked if they have left education since the beginning of the year prior to the survey and which degrees they have obtained. This part of the questionnaire contains an open question on the type and the field of newly obtained tertiary degrees. This information is coded and used for the generation of the variables PGTRAINA. 2. Biography questionnaire: Similar information is collected from respondents who fill in the biography questionnaire (usually during the first two years of participation in the panel). In contrast to the information from the person questionnaire the questions do not refer to currently obtained vocational qualifications but to qualifications obtained during the time before being part of the SOEP sample.

In the variable PGTRAINA we combine these two types of information. Each year the variable contains the most recently collected information.

If you want to take into account that a person holds two vocational qualifications you have to combine the information from all available years. In few cases we encounter the problem that a respondent provides information on two different apprenticeships in one survey year. This only happens once, namely in years when respondents fill in the person as well as the biography questionnaire. In these cases we prioritize the information from the person questionnaire as it refers to the current situation while the biography questionnaire contains retrospective information.

Because detailed information on the specific fields of occupation is not assessed in the Questionnaire of the SOEP Innovation Sample, PGTRAINA is not generated for Sample E (since 2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGTRAINA is coded to “-5” (not contained in questionnaire).

*Hartmann/Schütz (2002): Die Klassifikation der Berufe und der Wirtschaftszweige im Sozio-ökonomischen Panel – Neuvercodung der Daten 1984 – 2001. Infratest Sozialforschung, München.*

The variable is designed to provide information on the occupation of civil servant training (“Beamtenausbildung”). See the description of variable PGTRAINA for more details on the construction and the values of the variable.

Because detailed information on the specific fields of occupation is not assessed in the Questionnaire of the SOEP Innovation Sample, PGTRAIND is not generated for Sample E (since 2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGTRAIND is coded to “-5” (not contained in questionnaire).

#### pgfdt\_f – Data source FIELD, DEGREE, TRAIN

|    |  |       |
|----|--|-------|
| 1  | [1] Individual Questionnaire                       | 915   |
| 2  | [2] Gap Questionnaire (temporary drop-outs)        | 0     |
| 3  | [3] Biographical Questionnaire                     | 1778  |
| 4  | [4] Various Sources                                | 26    |
| -1 | [-1] No Answer                                     | 0     |
| -2 | [-2] Does Not Apply                                | 12606 |
| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 52304 |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

Because detailed information on PGFIELD, PGDEGREE and PGTRAIN is not assessed in the Questionnaire of the SOEP Innovation Sample, PGFDT\_F is not generated for Sample E (since 2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGFDT\_F is coded to “-5” (not contained in questionnaire).

#### pgbilztch – Change in Education since last survey / last year

|    |  |       |
|----|--|-------|
| 0  | [0] Consistent educational information since last survey   | 10331 |
| 1  | [1] Inconsistent educational information since last survey | 322   |
| 2  | [2] Inconsistent educational information since last year   | 441   |
| -1 | [-1] No Answer   | 0     |
| -2 | [-2] Does Not Apply  | 3507  |
| -3 | [-3] Answer Improbable                                     | 0     |
| -4 | [-4] Inadmissible Multiple Answer                          | 0     |
| -5 | [-5] Not Contained In Questionnaire                        | 53028 |
| -6 | [-6] Questionnaire Version With Modified Filtering         | 0     |

Because detailed information on PGFIELD, PGDEGREE and PGTRAIN is not assessed in the Questionnaire of the SOEP Innovation Sample, PGBILZTCH is not generated for Sample E (since 2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGBILZTCH is coded to “-5” (not contained in questionnaire).

#### pgbilztev – Change in Education, total observed period

|   |   |      |
|---|---|------|
| 0 | [0] Consistent educational information            | 9346 |
| 1 | [1] Inconsistent educational decline              | 2015 |
| 2 | [2] Inconsistent educational increase             | 2553 |
| 3 | [3] Inconsistent educational decline and increase | 56   |

|    |  |       |
|----|--|-------|
| -1 | [-1] No Answer                                     | 0     |
| -2 | [-2] Does Not Apply                                | 1355  |
| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 52304 |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

Because detailed information on PGFIELD, PGDEGREE and PGTRAIN is not assessed in the Questionnaire of the SOEP Innovation Sample, PGBILZTEV is not generated for Sample E (since 2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGBILZTEV is coded to “-5” (not contained in questionnaire).

| -5    | [-5] Not Contained In Questionnaire                | 0     |
| -6    | [-6] Questionnaire Version With Modified Filtering | 0     |

The variable PGSNDJOB represents the imputed current gross labor income from second

job generated for all SOEP respondents in each respective wave. Because missing information on PGSNDJOB is not imputed in the SOEP Innovation Sample, PGSNDJOB not generated for Sample E (since 2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGSNDJOB is coded to “-5” (not contained in questionnaire).

#### pgimpsnd – Imputation flag for SNDJOB

---

|    |  |       |
|----|--|-------|
| 0  | [0] not imputed                                    | 758   |
| 1  | [1] Imputed  | 114   |
| -1 | [-1] No Answer                                     | 0     |
| -2 | [-2] Does Not Apply                                | 16154 |
| -3 | [-3] Answer Improbable                             | 0     |
| -4 | [-4] Inadmissible Multiple Answer                  | 0     |
| -5 | [-5] Not Contained In Questionnaire                | 50603 |
| -6 | [-6] Questionnaire Version With Modified Filtering | 0     |

The variable PGIMPSND indicates imputations of item nonresponse in the variable PGSNDJOB (current gross labor income from second job). Because missing information on PGSNDJOB is not imputed in the SOEP Innovation Sample, PGIMPSND not generated for Sample E (since 2012), I (since 2011) and the supplementary samples (since 2012). For this purpose, PGIMPSND is coded to “-5” (not contained in questionnaire).
