Running since 1984, the German Socio-Economic Panel study (SOEP) is a wide-ranging representative longitudinal study of private households, located at the German Institute for Economic Research, DIW Berlin.

The aim of the SOEP Survey Papers Series is to thoroughly document the survey's data collection and data processing. The SOEP Survey Papers is comprised of the following series:

Series A – Survey Instruments (Erhebungsinstrumente)

Series B – Survey Reports (Methodenberichte)

Series C – Data Documentation (Datendokumentationen)

Series D - Variable Descriptions and Coding

Series E - SOEPmonitors

Series F – SOEP Newsletters

Series G - General Issues and Teaching Materials

The SOEP Survey Papers are available at http://www.diw.de/soepsurveypapers

SOEP-Core v38 – Codebook for the \$PEQUIV File 1984-2020: CNEF Variables with Extended Income Information for the SOEP

Markus M. Grabka

2023

Preface

The \$PEQUV-File is based on the Cross-National Equivalent File (CNEF) with extended income information for the SOEP. This file comprises not only the aggregated income figures provided in the CNEF but also further single income components.

The CNEF is a joint effort of researchers and staff affiliated with State Ohio University, the DIW Berlin, the University of Essex, Statistics Canada, the Melbourne Institute of Applied Economics and Social Research (MI), the Korea Labor Institute and the Swiss Foundation for research in Social Sciences (FORS) funded by the National Institute on Aging and by the DIW Berlin. For extensive documentation of the CNEF cf. https://cnef.ehe.osu.edu/ or: Joachim R. Frick, Stephen P. Jenkins, Dean R. Lillard, Oliver Lipps, and Mark Wooden (2007): The Cross-National Equivalent File (CNEF) and its Member Country Household Panel Studies. In: Schmollers Jahrbuch (Journal of Applied Social Science Studies), 127(4), 627-654.

General notes:

- In contrast to the original CNEF-data which is based on the 95% scientific use file of SOEP, the \$PEQUIV-files include the full 100%-sample.
- The SOEPv37 release of the \$PEQUIV-files has been updated to include the 2020 (wave BK) SOEP data.
- Population for \$PEQUIV is made up by all members of households who were successfully interviewed (i.e., persons with \$NETTO-codes 10 to 39 in the file PPFAD and \$HNETTO-code 1 in the file HPFAD (since 2021, weighted=1 is used instead of \$HNETTO=1).
- For longitudinal consistency, all \$PEQUIV income variables are consistently expressed in EURO (1 Euro = 1,95583 DM) independent of the currency used in the underlying survey instruments.
- Income data is missing for Sample C in 1990 and 1991 (first 2 waves of East German sample).
- Income data is missing for Sample M3/M4 (M5, M6, M7) in 2016 (2017, 2020, 2020) as not all income information was collected for this sample in the respective years.
- First time respondents of the refugee samples (M3-M5, M7, M8) got a questionnaire with a reduced set of income questions. Thus, for all households with such interviewees, household income will be underestimated and hence all weighting factors for all household members in the respective wave has been set to Nil.

An important distinction from the original CNEF data, is that the \$PEQUIV-files have been extended to also cover all single income components considered in the aggregated annual income figures of the CNEF. In principle, these single income components correspond to the originally surveyed infor-

mation (which is stored in the \$P, \$PKAL and \$H files, respectively) with some important amendments:

- Income variables are harmonized with respect to the periodicity, i.e. they give annual income (as of the previous calendar year). Components which are asked at monthly level have been multiplied by the number of months with receipt of the respective income (eventually, this implies imputation of missing number of months in the originally surveyed data as well as a longitudinally verified correction of implausible values).
- Any missing income information due to item-non response has been imputed according to the longitudinal and cross-sectional imputation procedures described in: Frick, J.R. and Grabka, M.M. (2005): Item-Non-Response on Income Questions in Panel surveys: Incidence, Imputation and the Impact on the Income Distribution. Allgemeines Statistisches Archiv (AStA) 89, 49-61.
- Any missing income information due to partial unit non response (PUNR, non responding individuals in households with at least one successful interview) has been imputed according to the longitudinal and cross-sectional imputation procedures described in: Frick, J.R.; M.M. Grabka and O. Groh-Samberg (2010): Dealing with Incomplete Household Panel Data in Inequality Research. SOEP Papers on Multidisciplinary Panel Data Research at DIW Berlin, No. 290, Berlin (see: http://www.diw.de/documents/publikationen/73/diw_01.c.354683.de/diw_sp0290.pdf forthcoming in Sociological Methods and Research). Due to lacking detailed information about income receipt, only six income components have been imputed: individual labour income (I11110\$\$), social security pensions (I11108\$\$), unemployment benefits (IUNBY\$\$), maternity benefits (IMATY\$\$), student grants (ISTUY\$\$) and private transfers (IELSE\$\$). This information is also used to generate a more thorough measure for taxes and social contributions paid by private households.
- An imputation flag for each of these single income components has been specified. These flags take a value of 1 if item-non-response on the underlying income variable has been imputed and 0 otherwise.

General variable naming conventions for the \$PEQUIV-variables: (see variable list on page 4):

Variable names are longitudinally consistent using a two-digit suffix – instead of a four-digit suffix used in the original CNEF-files – indicating the survey year
 (wave A = 84, wave B = 85, ..., wave BL = 21, \$\$ =84, 85, ..., 21).

Variable naming conventions for the single income components:

- Variable names related to income components at the individual level start with the prefix "I", e.g., Christmas bonus is given in variable IXMAS\$\$.
- The prefix "F" indicates the imputation flag, e.g. the flag variable for rental income (RENTY\$\$) is given by FRENTY\$\$.

For further information please contact: Markus M. Grabka (mgrabka@diw.de).

Variable Name	X11104LL
Variable Label	Sub-sample Identifier
Unit of Observation	Individual
Description	This variable indicates from which sub sample an individual in the SOEP is drawn.
Method	The SOEP contains several different samples.
	 (1) 'A 1984 Initial Sample (West)' (2) 'B 1984 Migration (until 1983, West)' (3) 'C 1990 Initial Sample (East)' (4) 'D 1994/5 Migration (1984-1994, West)' (5) 'E 1998 Refreshment' (6) 'F 2000 Refreshment' (7) 'G 2002 High Income' (8) 'H 2006 Refreshment' (9) 'I 2009 Innovation Sample' (10) 'J 2011 Refreshment' (11) 'K 2012 Refreshment' (12) 'L1 2010 Birth Cohort (2007-2010)' (13) 'L2 2010 Family Type (Low-Income, Single-Parent, Large Families)' (14) 'L3 2011 Family Type (Single-Parent, Large Families)' (14) 'L3 2011 Family Type (Single-Parent, Large Families)' (15) 'M1 2013 Migration (1995-2011)' (16) 'M2 2015 Migration (2009-2013)' (17) 'M3 2016 Refugee (2013-2015)' (18) 'M4 2016 Refugee (2013-2015)' (19) 'M5 2017 Refugee (2013-2015)' (19) 'M5 2017 Refugee (2013-2016)' (20) 'N 2017 Refreshment (Social City)' (21) 'O 2018 Refreshment (Social City)' (22) 'P 2019 Top Shareholder' (23) 'Q 2019 Lesbian-Gay-Bisexual (LGB) ' (24) 'M6 2020 Refugee (2016)' (25) 'M7 2020 Migration (Bulgarian, Polish, Romanian nationality 2013-2016)' (26) 'M8 2020 Migration (Evaluation the residence act)'
Algorithm	X11104LL = psample

Variable Name	X11105\$\$
Variable Label	Indicator of Whether Person in Household was Interviewed
Unit of Observation	Individual
Description	Indicates whether an individual present in the household provided interview respons- es. Children in the household are counted as interviewed persons.
Method	Individuals in the household 16 years of age and older who are members of a surveyed household reject to give an interview are given a 0.
Format	0 = Didn't provide information 1 = Provided information
	The original survey variables provided below can be found in the file PPFAD. This algorithm omits individuals with survey non-responses.
Algorithm	If Ynetto $>= 10$ & Ynetto < 30 then X11105\$\$ = 1; else X11105\$\$ = 0;

Variable Name	D11101\$\$	
Variable Label	Age of Individual	
Unit of Observation	Individual	
Description	Indicates the age of the individual in years.	
Method	The SOEP records the birth date (GEBJAHR) of each individual. The current age of an individual is created by subtracting the year of birth from the current year.	
Format	-1 = Item non-response 0 = Newborn up to first birthday	
	The value of this variable ranges from 0 to 105.	
	The original survey variables provided below can be found in the file PPFAD. This algorithm omits individuals with survey non-responses.	
Algorithm	D11101\$\$ = SYEAR - GEBJAHR (\$\$=84, 85,)	

Variable Name	D11102LL
Variable Label	Gender of Individual
Unit of Observation	Individual
Description	Indicates the gender of the individual.
Method	The SOEP records the gender (SEX) of each individual. This information is acquired once and is not obtained in subsequent years.
	Gender is constant through time and therefore does not have a yearly suffix. This var- iable is missing for the few cases where information about gender was not reported and inferences about gender could not be made.
Format	-1 = Item non-response 1 = Male 2 = Female
	The original survey variables provided below can be found in the file PPFAD. This algorithm omits individuals with survey non-responses.
Algorithm	D11102LL = SEX

Variable Name	D11103\$\$
Variable Label	Race of Household Head
Unit of Observation	Individual
Description	Indicates the race of the interviewed head of household.
Method	Race is <u>not</u> available in the SOEP.
	 However, to separate Germans from non-Germans use the variables about nationality (NATION\$\$) which can be found in the \$PGEN-files or the information about whether a person was born in Germany (GERMBORN) or the country of origin (CORIGIN) whereas both can be found in the PPFAD-file.
Format	-1 = no information available

Variable Name	D11104\$\$	
Variable Label	Marital Status of Individual	
Unit of Observation	Individual	
Description	This variable indicates the marital status in the current survey year of all individuals in the household 16 years of age and older.	
Method	The married category represents individuals who are legally married and individuals who are living with a partner. Married non-German "guest workers" whose spouses remained in their native countries are given a code of 6 or 7 depending on their ages.	
Format	 -1 = N/A - Child / Item non-response 1 = Married / Living with a Partner 2 = Single 3 = Widowed 4 = Divorced 5 = Separated (Legally Married) The original survey variables provided below can be found in the file _PGEN. This algorithm omits individuals with survey non-responses. 	
Algorithm	Equivalent Data File Variable Definitions: $D11101_ = Age of Individual$ if $D11101$ \$ ge 16 then do if Yfamstd = 1,6,7 then $D11104$ \$ = 1 else if Yfamstd = 2,8 then $D11104$ \$ = 5 else if Yfamstd = 3 then $D11104$ \$ = 2 else if Yfamstd = 4 then $D11104$ \$ = 4 else if Yfamstd = 5 then $D11104$ \$ = 3 end	
	if D11101 lt 16 then D11104 = -1	

Variable Name	D11105\$\$
Variable Label	Relationship to Household Head
Unit of Observation	Individual
Description	This variable indicates the individual's relationship to the current survey year's head of household.
Method	The relation to head variable is created by collapsing the SOEP relationship to head variable into 5 categories. These categories include spouses, life-partners, children, foster children, siblings, parents, in-laws, grandchildren, other relatives, and unrelated persons. Since 2012 (wave 29) the original SOEP variable collects more detailed information about family relationships.
Format	 -1 = Item non-response 1 = Head 2 = Partner 3 = Child 4 = Relative 5 = Non-relative The original survey variables provided below can be found in the file _PBRUTTO. This algorithm omits individuals with survey non-responses.
Algorithm	if i ge 1 and I le 28 then do; if Ystell = 0 then D11105\$\$ = 1 else if Ystell = 1,2,13 then D11105\$\$ = 2 else if Ystell = 3 or 4 then D11105\$\$ = 3 else if Ystell = 5, 6, 7, 8, 9, 10 then D11105\$\$ = 4 else if Ystell =11,12,13 then D11105\$\$ = 5 else D11104\$\$ = -1 end; if i ge 29 then do; if Ystell = 0 then D11105\$\$ =1 else if Ystell in (11,12,13) then D11105\$\$ =2 else if Ystell in (21,22,23,24) then D11105\$\$ =3 else if Ystell in (25,26,31,36,41,42,43,61,62,63,64) then D11105\$\$ =4 else if Ystell in (27,32,33,35,45,51,52,71) then D11105\$\$ =5 else D11105\$\$ =-1 end;

Variable Name	D11106\$\$
Variable Label	Number of Persons in Household
Unit of Observation	Household
Description	Indicates the number of persons in the household at the time of the interview.
Method	This information is obtained from the household head or another household member who knows about the household's composition.
Format	-1 = Item non-response The value of this variable ranges from 1 to 17.
	The original survey variables provided below can be found in the file _HBRUTTO. This algorithm omits individuals with survey non-responses.
Algorithm	D11106\$\$ = Yhhgr

Variable Name	D11107\$\$
Variable Label	Number of Children in Household
Unit of Observation	Household
Description	Indicates the number of persons in the household under age of 18 at the time of the interview.
Method	This variable is created by computing the number of individuals in the household under the age of 18.
Format	 -1 = Item non-response The value of this variable ranges from 0 to 10. The original survey variables provided below can be found in the file \$PPFAD. This algorithm omits individuals with survey non-responses. Equivalent Data File Variable Definitions: D11101_ = Age of Individual
Algorithm	if age\$\$ ge 0 and age\$\$ le 17 then sumkids\$\$=1 if age\$\$ = . and \$netto in (20-27) then sumkids\$\$=1 D11107\$\$ = sum of (sumkids\$\$) in the household

Variable Name	D11108\$\$	
Variable Label	Education With I	Respect to High School
Unit of Observation	Individual	
Description	This variable ind ed high school, of of age and older	dicates the highest level of education (less than high school, complet- or more than high school) of all individuals in the household 16 years .
Method	This variable is c	coded as follows:
	Less than = High School	Intermediate secondary school (Realschule) Lower secondary school (Hauptschule) Other None
	High School =	Upper secondary school degree giving access to university studies (Abitur) Certificate of aptitude for specialized short-course higher education (Fachhochschulreife) Apprenticeship (Lehre) Specialized vocational school (Berufsfachschule)
	More than = High School	School of health care (Schule des Gesundheitswesens) Specialized college of higher education, post-secondary technical (Fachhochschule) College Technical university usually requiring practical training as part of the studies (Technische Universität) Civil service training
Format	-1 = N/A – Child 1 = Less than Hi 2 = High School 3 = More than H The original surv algorithm omits i Equivalent Data	 I / Item non-response igh School Iigh School vey variables provided below can be found in the file _PGEN. Variable Name	D11109\$\$
Variable Label	Number of Years of Education
Unit of Observation	Individual
Description	This variable indicates the number of years of education completed at the time survey for all individuals in the household 16 years of age and older.
Method	Individuals with a school leaving degree are assigned a minimum of between 9 and 12 years of education. Individuals with a vocational degree are assigned an additional 2 to 3.5 years of education. Individuals who attended a technical college are assigned an additional 4 years of education. If an individual received a vocational college degree or attended a university outside of the FRG then the individual is assigned a total of 18 or 19 years of education. For more information about the construction of this variable see Couch, 1994.
Format	-1 = N/A – Child / Item non-response The value of this variable ranges from 7 to 18. The original survey variables provided below can be found in the file _PGEN. This
Algorithm	algorithm omits individuals with survey non-responses. if Ybilzeit=.B then D11109\$\$=0; else D11109\$\$ = Ybilzeit; else D11109\$\$=-1;

Variable Name	D11112LL
Variable Label	Race of individual
Unit of Observation	Individual
Description	Indicates the race of each individual in the household.
Method	Race is <u>not</u> available in the SOEP.

Variable Name	E11101\$\$
Variable Label	Annual Work Hours of Individual
Unit of Observation	Individual
Description	This variable reports annual hours worked in the previous year for all individuals in the household 16 years of age and older.
Method	There is no direct report of annual work hours in the SOEP. This variable was con- structed using information on employment status in the survey year, average number of hours worked per week, and the number of months worked in the previous year (reported in the activity calendar).
	Annual hours worked in the previous year is calculated by adding together the esti- mated annual hours of full-time, part-time (including marginal employed), vocational training and short-time work. Annual hours of work in each of these four states is cal- culated by multiplying the average number of hours worked per week by the number of months worked in each of these three states for the previous year and by 4.33 (the average number of weeks per month). No correction for vacation or diseases has been made.
	When the state indicated in the employment status variable matches the state recorded in the monthly calendar file we use the reported average number of hours worked per week as our measure of weekly hours worked.
	When the state indicated in the employment status variable does <u>not</u> match the state recorded in the monthly calendar file we use an imputed weekly hours value as our measure of weekly hours worked. The imputed values are based on a regression of reported log average weekly work hours separately for full-time, part-time, marginal or irregular, short-time and currently not employed individuals. Covariates are age, age squared, sex, dummy variable for children in the household, marital status, region (east or west Germany) and two education dummy variables.
	There are still some cases where no annual work hours but individual labor income (I11110\$\$) can be observed. This finding can be explained by e.g. individuals who took maternity leave or did National Service.
Format	-1 = N/A - Child 0 = Not employed in the previous year The value of this variable ranges from 1 to 7457.
	The original survey variables provided below can be found in the fileP. This algorithm omits individuals with survey non-responses.

Variable Name	E11104\$\$		
Variable Label	Primary Activity of Individual		
Unit of Observation	Individual		
Description	This variable indicates primary activity at the time of the survey for all individuals in the household 16 years of age and older.		
Method	This variable is based on the individual's self-reported employment status at the time of the interview. If the individual reported being full-time, part-time, or marginally employed, having short-time work, performing military/civilian service, on maternity leave, or being engaged in in-company training then the individual is considered to be working now. If the individual reported not being employed or being unemployed then the individual is considered to be not working now. Unemployed is not a category in the recoded variable because in the original data individuals were able to choose unemployed as their employment status in 1984 through 1990 only.		
Format	 -1 = N/A - Child -2 = Item-non response 1 = Working Now 2 = Not Working Now The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses. Equivalent Data File Variable Definitions: D11101_ = Age of Individual

Variable Names	H11112\$\$
Variable Label	Indicator – Wife / spouse is in Household
Unit of Observation	Household
Description	These variables indicate the presence of a "wife, spouse or cohabitee" in the house-hold.
Method	These variables are simple indicator variables that a person who is a "wife/spouse" is present in a given year.
Format	0 = Not present 1 = Present
	The variables provided below can be found in the \$PEQUIV files. This algorithm omits individuals with survey non-responses.
Algorithm	if X11103\$\$=1 then do; H11112\$\$=0; if D11105\$\$=2 then H11112\$\$=1; end;

The following algorithms allow users to take Equivalent file variables and construct equivalence weights commonly used in various countries. To obtain equivalent household income, divide the equivalence scale weight into the household income variable. Here we present three typical example of equivalence weights:

Equivalence scale OECD Equivalence Weights	
Unit of Observation	Household
Description	Scale used by Organization for Economic Cooperation and Development (1982)
Method	Sets a single adult to be 1.0, each additional adult to be 0.7, and each child to be 0.5.
Algorithm	NEWVAR\$\$=(1.0+0.7*(D11106\$\$-H11101\$\$-1)+0.5*H11101\$\$);
Equivalence scale	Modified OECD Equivalence Weights
Unit of Observation	Household
Description	Scale used by Organization for Economic Cooperation and Development (1982), see also Hagenaars et al. (1994).
Method	Sets a single adult to be 1.0, each additional adult to be 0.5, and each child to be 0.3.
Algorithm	NEWVAR\$\$=(1.0+0.5*(D11106\$\$-H11101\$\$-1)+0.3*H11101\$\$);
Equivalence scale	Other Equivalence Weights (e.g. Square root of the Household size)
Unit of Observation	Household
Description	Household equivalence weight based upon a single international scale.
Method	The weight is based upon a scale developed in Buhmann et al. (1988). The scale is characterized by the following equation: $EI = D/S^{e}$
	Where equivalent income (El) equals total disposable household income (D) divided by household size (S) raised to the power (e). The parameter (e) represents the elastic- ity of the scale rate with respect to household size. Recent international studies on in- come inequality and poverty sponsored by the OECD (e.g., Forster 1990; Atkinson et al. 1994), and the Statistical Office of the European Commission (Hagenaars et al. 1994) and the Ruggles (1990) study of the United States use this type of exponential equivalence scale. We adopt a value of a equal to 0.5, which is most commonly used in international comparisons.
Algorithm	NEWVAR\$\$=D11106\$\$**0.5;

Variable Name	I11101\$\$
Variable Label	Household Pre-Government Income
Unit of Observation	Household
Period	Annual
Description	This variable represents the combined income before taxes and government transfers in the previous year of all individuals in the household 16 years of age and older.
Method	This variable is the sum of total family income from labor earnings, asset flows, private retirement income and private transfers. Labor earnings include wages and salary from all employment including training, self-employment income, and bonuses, overtime, and profit-sharing. Asset flows include income from interest, dividends, and rent. Private transfers include payments from individuals outside of the household including alimony and child support payments.
Format	The value of this variable ranges from 0 to 9,999,999. This variable is in current year EURO. This algorithm omits individuals with survey non-responses. Equivalent Data File Variable Definitions: I11103 = Household Labor Earnings I11104 = Household Asset Income I11106 = Household Private Transfers I11117 = Household Private Retirement Income
Algorithm	I11101\$\$ = I11103\$\$ + I11104\$\$ + I11106\$\$ + I11117\$\$

Variable Name	I11102\$\$
Variable Label	Household Post-Government Income
Unit of Observation	Household
Period	Annual
Description	This variable represents the combined income after taxes and government transfers in the previous year of all individuals in the household.
Method	This variable is the sum of total family income from labor earnings, asset flows, private retirement income, private transfers, public transfers, and social security pensions minus total family taxes. Labor earnings include wages and salary from all employment including training, self-employment income, bonuses, overtime, and profit-sharing. Asset flows include income from interest, dividends, and rent. Private transfers include payments from individuals outside of the household including alimony and child support payments. Public transfers include housing allowances, child benefits, subsistence assistance from the Social Welfare Authority, special circumstances benefits from the Social Welfare Authority, government student assistance, maternity benefits, unemployment benefits, unemployment assistance, and unemployment subsistence allowance. Social security pensions include payments from old age, disability, and widowhood pension schemes. The tax burdens provided here are based upon updated and modified tax calculation routines developed by Schwarze. The tax burden includes income taxes and payroll taxes (health, unemployment, retirement insurance and nursing home insurance taxes). These routines are described in Schwarze (1995).
	Household post-government income has no negative values.
Format	The value of this variable ranges from 0 to 9,999,999. This variable is in current year EURO.
	This algorithm omits individuals with survey non-responses.
	Equivalent Data File Variable Definitions: I11103 = Household Labor Earnings I11104 = Household Asset Income I11106 = Household Private Transfers I11107 = Household Public Transfers I11108 = Household Social Security Pensions I11109 = Total Household Taxes I11117 = Household Private Retirement Income
Algorithm	I11102\$\$ = I11103\$\$ + I11104\$\$ + I11106\$\$ + I11107\$\$ + I11108\$\$ + I11117\$\$ - I11109\$\$

Variable Name	I11103\$\$
Variable Label	Household Labor Income
Unit of Observation	Household
Period	Annual
Description	This variable represents the combined gross labor income in the previous year of all individuals in the household 16 years of age and older.
Method	Labor earnings include wages and salary from all employment including training, primary and secondary jobs, and self-employment, plus income from bonuses, over- time, and profit-sharing.
	Specifically labor earnings is the sum of income from primary job, secondary job, self-employment, service pay, 13th month pay, 14th month pay, Christmas bonus pay, holiday bonus pay, miscellaneous bonus pay, and profit-sharing income. Since 1991 indemnity payments and commuting expenses or travel grants are also considered.
Format	The value of this variable ranges from 0 to 9,999,999. This variable is in current year EURO.
	This algorithm omits individuals with survey non-responses.
	Equivalent Data File Variable Definitions: I11110 = Individual Labor Earnings
Algorithm	I11103\$\$ = sum of $I11110$ \$\$ over all individuals in the household

Variable Name	I11104\$\$
Variable Label	Household Asset Income
Unit of Observation	Household
Period	Annual
Description	This variable represents the household asset income in the previous year reported by the head of the household.
Method	Asset flows include income from interest, dividends, and rent.
	After 1984 respondents who could not estimate their interest and dividend income directly were asked to select a range from a set of categories. Their choices were: under 500 DM 500 to 2,000 DM 2,000 to 5,000 DM 5,000 to 10,000 DM 10,000 DM and over
	Starting in year 2001 (wave R) an additional item was offered: 10,000 to 20,000 DM 20,000 DM and over
	Since year 2002 (wave S) all items are asked for Euro: under 250 Euro 250 to 1,000 Euro 1,000 to 2,500 Euro 2,500 to 5,000 Euro 5,000 to 10,000 Euro 10,000 Euro and over
	These respondents are assigned an interest and dividend amount based on uniformly distributed random numbers within their income range.
	Rental income is the amount of income from rent minus any operation and mainte- nance costs. Negative rental incomes that result from operating costs in excess of in- come from rental and leasing are not considered here but set to zero.
	In 1991 income from rent and operation and maintenance costs were not asked. If the respondent was interviewed in 1990, 1991, and 1992 and reported having rental income or operation and maintenance costs for 1990 and 1992, the average of the 1990 and 1992 values are assigned to 1991. If the respondent was interviewed in only two of the years, one of the years being 1991, and reported having rental income or operation and maintenance costs, then rental income or operation and maintenance costs for that year are assigned to 1991.
Format	The value of this variable ranges from 0 to 9,999,999. This variable is in current year EURO.
	The survey variables provided below are part of the \$PEQUIV-file. This algorithm omits individuals with survey non-responses.
Algorithm	I11104\$\$ = (RENTY\$\$ - OPERY\$\$) + DIVDY\$\$

Variable Name	I11105\$\$
Variable Label	Household Imputed Rental Value
Unit of Observation	Household
Period	Annual
Description	This variable represents the imputed rental value in the previous year of owner occu pied housing and for renters with below markets rent.
Method	The Imputed Rent (IR) information calculated for the German SOEP data is based on the so called Opportunity Cost Approach. This approach at the micro level yields in- formation equivalent to that given by the Market Value Approach used in National account statistics for determining IR. After generating a fictitious market rent for owner-occupiers, all owner related costs are deducted including operating and maintenance costs, interest payments on mortgages, as well as property taxes (see Yates 1994 / United Nations 1977). In more detail, the implementation of the opportunity cost approach is used here in the following way. Along the lines of Oaxaca (1973), we estimate an OLS (semilog) regression model of gross rent in terms of square meters (not including heating) actu- ally paid by main tenants in privately financed housing (without social housing and households with reduced rent). Independent variables include indicators describing the condition of the house, the year of construction, size of dwelling, length of occu- pancy, community size and disposable income. Applying these regression coefficients to the population of owner occupiers <u>and</u> individuals living in households. The resulting estimate represents a gross value at market prices (without costs for heating and warm water). For owner-occupiers owner-specific costs for taxation, maintenance and operating costs as well as interest on mortgages were deducted yielding a net value which can be interpreted as the appropriate income advantage of owner-occupied housing. For rent-free households and persons living in households with below market rents no further deductions have to be made. Information on interest and mortgage payments for the previous year from homeown- ers in SOEP serves as the basis for determining the level of interest payments. We as- sume an annuity with constant payments based on 7% annual interest and a 1% prin- cipal over the course of an average period of 30 years. In addition, we assume that mortgage payments begin at the same time
Format	The value of this variable ranges from 0 to 9,999,999. This variable is in current year EURO.
Algorithm	N/a

Variable Name	I11106\$\$
Variable Label	Household Private Transfers
Unit of Observation	Household
Period	Annual
Description	This variable represents the combined private transfers in the previous year of all individuals in the household 16 years of age and older.
Method	Private transfers consists of income received from persons outside of the interviewed household. Starting in wave R an additional question identifies alimony separately (variable $p2003$ in SOEP file $R, S,$) and since 2010 advance child maintenance payment (IACHM\$\$) is asked separately. The bulk of transfer is likely to consist of alimony and child support payments.
Format	The value of this variable ranges from 0 to 9,999,999. This variable is in current year EURO.
	The survey variables provided below are part of the \$PEQUIV-file. This algorithm omits individuals with survey non-responses.
Algorithm	I11106\$\$ = sum of (IALM\$\$ + IACHM\$\$ + ICHSU\$\$ + ISPOU\$\$ + IELSE\$\$) over all individuals in the household

Variable Name	I11107\$\$		
Variable Label	Household Public Transfers		
Unit of Observation	Household		
Period	Annual		
Description	This variable represents the combined public transfers in the previous year of all individuals in the household 16 years of age and older.		
Method	Public Transfers are the sum of individual public transfers student grants, maternity benefits, unemployment benefits, unemployment assistance, subsistence allowance and transition pay over all individuals in the household, plus household benefits housing allowances, child benefits, nursing care insurance, direct housing subsidy, subsistence assistance, support for special circumstances, social assistance for elderly unemployment benefit II and sickness benefit.		
	In 1984 the amount of child benefits is not asked. Child benefits for this year were imputed using information on the number of children in the household and the number of months the benefits were received.		
	In 1992 through 1994 the amounts of subsistence assistance and special circumstanc- es benefits are not asked. These values have been filled in with imputed values for to- tal social welfare income. In 1995 through 2000 amounts of subsistence assistance and special circumstances benefits are imputed using an algorithm developed by Peter Krause (DIW) based on the benefits received in the present survey month.		
	Since 1996 nursing care insurance benefits are included in the sum. In 1996 German law established direct housing subsidy payments. Starting in the 2000 survey a separate question was asked about income from this source. Direct housing subsidy payments for respondents who bought homes between 1996 and 1999 were imputed using information about the year of construction, acquisition of ownership and number of children in the household. In 2005 social assistance for elderly was asked the first time. In 2006 unemployment benefit II was asked the first time and replaced unemployment assistance. Since 2009 additional child benefit was asked the first time. For survey year 2010 HH-public transfers does also include 2500 Euro car scrappage scheme for households which acquired a new car in the previous year. Since 2014 child care subsidy was asked the first time in SOEP. In 2017 benefits from the educational package and asylum seekers benefits were also included. In 2020 benefits from "Baukindergeld" Building subsidy for new property owners were also included. In 2021 sickness benefits were asked for the first time.		
Format	The value of this variable ranges from 0 to 9,999,999. This variable is in current year EURO.		
	The survey variables provided below are part of the \$PEQUIV-file. This algorithm omits individuals with survey non-responses.

Variable Name	I11108\$\$		
Variable Label	Household Social Security Pensions		
Unit of Observation	Household		
Period	Annual		
Description	This variable represents the combined social security pensions in the previous year of all individuals in the household 16 years of age and older.		
Method	Social security pensions are the sum of old-age, disability, and widowhood social security pensions. This include payments of the German Pension Insurance (GRV) Miner's social Insurance (Knappschaft), Civil Servant Pension (Beamtenpension) War Victim Benefits (Kriegsopferversorgung), Farmer's Benefits and accident pension (GUV), pensions from abroad and pension for liberal profession (berufsständische Versorgungswerke).		
	In 1993 through 1994 pension income from East German pensions (\$p79020 and \$p79120) is assigned to other pension income.		
	In case of partial unit-non responding households this information has been imputed. For details see: Frick, Grabka & Groh-Samberg (2010).		
Format	The value of this variable ranges from 0 to 9,999,999. This variable is in current year EURO.		
	The survey variables provided below are part of the \$PEQUIV-file. This algorithm omits individuals with survey non-responses.

Variable Name	I11109\$\$	
Variable Label	Total Household Taxes	
Unit of Observation	Household	
Period	Annual	
Description	This variable includes income taxes and payroll taxes (e.g. health, unemployment, nursing home and retirement insurance taxes) in the previous year of all individuals in the household 16 years of age and older.	
Method	The tax estimates come from Schwarze (1995), the taxes are assigned on a household basis. The estimated tax burdens include income taxes and payroll taxes (health, unemployment, care and retirement insurance taxes). These routines are described in Schwarze (1995). Since 1995 the solidarity surplus tax is also considered in the tax estimates. No algorithms are provided for the tax estimates.	
Format	The value of this variable ranges from 0 to 9,999,999. This variable is in current year EURO.	
	The survey variables provided below are part of the \$PEQUIV-file.	
Algorithm	I11109\$\$ = I111111\$\$ + I11112\$\$	

Variable Name	I11110\$\$		
Variable Label	Individual Labor Earnings		
Unit of Observation	Individual		
Period	Annual		
Description	This variable represents the Gross labor earnings in the previous year of individuals in the household 16 years of age and older.		
Method	Labor earnings include wages and salary from all employment including training, primary and secondary jobs, and self-employment, plus income from bonuses, over- time, and profit-sharing.		
	Specifically labor earnings is the sum of income from primary job, secondary job, self-employment, 13th month pay, 14th month pay, Christmas bonus pay, holiday bo- nus pay, miscellaneous bonus pay, and profit-sharing income. Since 1991 indemnity payments, since 1996 military service payments and since 2006 commuting expenses or travel grants are also considered.		
	In case of partial unit-non responding households this information has been imputed. For details see: Frick, Grabka & Groh-Samberg (2010).		
Format	The value of this variable ranges from 0 to 9,999,999. This variable is in current year EURO.		
	The survey variables provided below are part of the \$PEQUIV-file. This algorithm omits individuals with survey non-responses.

Since 2016	I11110\$\$ = IJOB1\$\$ + IJOB2\$\$ + ISELF\$\$ + IMILT\$\$ + I13LY\$\$ + I14LY\$\$ + IXMAS\$\$ + IHOLY\$\$ + IGRAY\$\$ + IOTHY\$\$ + IDEMY\$\$ + ITRAY\$\$ + IWITH\$\$		

Variable Name	I11111\$\$
Variable Label	Household Federal Taxes
Unit of Observation	Household
Period	Annual
Description	This variable includes federal income taxes in the previous year of all individuals in the household 16 years of age and older.
Method	The tax estimates come from Schwarze (1995). Taxes are estimated for each tax unit within the household and then summed over all tax units within the household to arrive at a total household tax burden. The estimated tax burdens include federal income taxes and solidarity surplus tax. These routines are described in Schwarze (1995). No algorithms are provided for the tax estimates.
Format	The value of this variable ranges from 0 to 9,999,999. This variable is in current year EURO.
Algorithm	N/a

Variable Name	I11112\$\$		
Variable Label	Household Social Security Taxes		
Unit of Observation	Household		
Period	Annual		
Description	This variable includes social security taxes (payroll taxes) in the previous year of all individuals in the household 16 years of age and older.		
Method	The tax estimates come from Schwarze (1995). Taxes are estimated for each tax unit within the household and then summed over all tax units within the household to arrive at a total household tax burden. The estimated tax burdens include social security taxes (e.g. health, unemployment, nursing home and retirement insurance taxes). These routines are described in Schwarze (1995). No algorithms are provided for the tax estimates.		
Format	The value of this variable ranges from 0 to 9,999,999. This variable is in current year EURO.

Variable Name	I11118\$\$		
Variable Label	Household Windfall Income		
Unit of Observation	Household		
Period	Annual		
Description	This variable represents the amount of total household windfall income in the previ- ous year of all individuals in the household 16 years of age and older.		
Method	Windfall income consists of one-time transfers, winnings, inheritance and gifts of money or items worth more than 5000 DM (wave Q-R), 2500 Euro (wave S-U) or 500 Euro (since wave V). It was asked the first time in wave Q (variable qh4505 in SOEP file QH). In 2016 the question has been split up into 3, inheritances, bequest and lottery winnings.		
Format	The value of this variable ranges from 0 to 9,999,999. This variable is in current year EURO.		
	This algorithm omits individuals with survey non-responses. The original survey variables provided below can be found in the file _H.		
Algorithm	I11118\$\$ = Ywind

Variable Name	I11210\$\$		
Variable Label	Share of imputed Individual Labor Earnings		
Unit of Observation	Individual		
Description	This variable indicates the percentage share of income that has been imputed for individual labor earnings (I11110\$\$). The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).		
Method	In the original SOEP data there are three types of missing values. These missing values can be interpreted as: -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.		
Format	0 = Not Imputed 1 = Fully Imputed This algorithm omits individuals with survey non-responses.		
Algorithm	I11210\$\$= percentage share of income that has been imputed for I11110\$\$		

Variable Name	I11218\$\$
Variable Label	Impute Household Windfall Income
Unit of Observation	Household
Description	This variable indicates if windfall income (I11118\$\$) has been imputed. Item non response on windfall income has been imputed using the sample median in the respective observation years. For further details, see: Grabka and Frick (2003)
Method	In the original SOEP data there are three types of missing values. These missing values can be interpreted as:
	-1 or .A =no answer or do not know-2 or .B =does not apply-3 or .C =original value was deleted because it was found to be implausible
	The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.
Format	0 = Not Imputed 1 = Fully Imputed
	This algorithm omits individuals with survey non-responses.
Algorithm	N/a

Variable Name	RENTY\$\$
Variable Label	Income from rental and leasing
Unit of Observation	Household
Period	Annual
Description	This variable represents the household income from rental and leasing in the last year.
	In 1991 income from rent were not asked. If the respondent was interviewed in 1990, 1991, and 1992 and reported having rental income for 1990 and 1992, the average of the 1990 and 1992 values are assigned to 1991. If the respondent was interviewed in only two of the years, one of the years being 1991, and reported having rental income, then rental income for that year are assigned to 1991.
Method	Transcribed variable.
Format	The value of this variable ranges from 0 to 9,999,999.
	This variable is in current year EURO.
	The original survey variables provided below can be found in the file _H. This algorithm omits individuals with survey non-responses.

Variable Name	DIVDY\$\$
Variable Label	Interest, dividend income
Unit of Observation	Household
Period	Annual
Description	This variable represents the household income from interest and dividends in the last year.
Method	After 1984 respondents who could not estimate their interest and dividend income directly were asked to select a range from a set of categories. Their choices were: under 500 DM 500 to 2,000 DM 2,000 to 5,000 DM 5,000 to 10,000 DM 10,000 DM and over
	Starting in year 2001 (wave R) an additional item was offered: 10,000 to 20,000 DM 20,000 DM and over
	Since year 2002 (wave S) all items are asked for Euro: under 250 Euro 250 to 1,000 Euro 1,000 to 2,500 Euro 2,500 to 5,000 Euro 5,000 to 10,000 Euro 10,000 Euro and over
	These respondents are assigned an interest and dividend amount based on uniformly distributed random numbers within their income range.
Format	The value of this variable ranges from 0 to 9,999,999. This variable is in current year EURO. The original survey variables provided below can be found in the file _H. This algorithm omits individuals with survey non-responses.

Variable Name	CHSPT\$\$
Variable Label	Child allowance
Unit of Observation	Household
Period	Annual
Description	This variable represents the household income from child allowances in the last year.
Method	In 1984 questions related to this topic were not asked. Child benefits for this year were imputed using information on the number of children in the household and the number of months the benefits were received. In 1985 to 2000 there was no information regarding the number of months the children allowance was claimed. In all those cases 12 months of claim was supposed. Since 2001 child allowances is the product of the number of months the children allowance was claimed in the previous year and the average amount per month. In 2020, a one-time supplement of around €300 per child was granted (Kinderbonus).
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _H. This algorithm omits individuals with survey non-responses.

Variable Name	NURSH\$\$
Variable Label	Nursing allowances
Unit of Observation	Household
Period	Annual
Description	This variable represents the household income from nursing allowances. Nursing allowances was introduced in the German welfare system in 1996. In 1996-2000 questions related to this topic were only asked for the month of the interview but not for the previous year. Nursing allowances for the previous year was imputed using this information. Since 2001 both the numbers of that benefit was claimed in the previous year and the average amount per month were asked.
Method	Nursing allowances is the product of the number of months that benefit was claimed in the previous year and the average amount per month.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _H. This algorithm omits individuals with survey non-responses.

Variable Name	SUBST\$\$
Variable Label	Social assistance
Unit of Observation	Household
Period	Annual
Description	This variable represents the household income from social assistance in the last year.
Method	Social assistance is the product of the number of months that benefit was claimed in the previous year and the average amount per month. In 1992 through 1994 the amounts of subsistence assistance and special circumstances benefits were not asked. These values have been filled in with imputed values for total social welfare income. In 1995 through 2000 amounts of subsistence assistance <u>and</u> special circumstances benefits are imputed using an algorithm developed by Peter Krause (DIW) based on the benefits received in the present survey month. Since 2010 subsistence assistance and special circumstances benefits were asked in one single item.
Format	The value of this variable ranges from 0 to 99.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _H.
Algorithm	This algorithm omits individuals with survey non-responses.

---------------------	--	--	--
Variable Label	Housing support for owner-occupiers		
Unit of Observation	Household		
Period	Annual		
Description	This variable represents the household income from direct housing support for owner- occupiers in the last year.		
Method	In 1996 German law established direct housing subsidy payments for owner- occupiers. Starting in the 2000 survey a separate question was asked about income from this source. Direct housing subsidy payments for respondents who bought homes between 1996 and 1999 were imputed using information about the year of construction, acquisition of ownership and number of children in the household. Since 2015 information about this income has been no longer collected.		
Format	The value of this variable ranges from 0 to 99.999. This variable is in current year EURO.

	FADCHB\$\$ FCHSUB\$\$ FKIDY\$\$ FEDUPAC\$\$ FASYL\$\$ FBAUK\$\$	Imputation flag: Additional child benefit Imputation flag: Child care subsidy Imputation flag: Income of children Imputation flag: Benefits from the educational package Imputation flag: Asylum seeker benefit Imputation flag: Building subsidy for new property owners
Variable Label	Imputation flag f	for the respective income component
Unit of Observation	Household	
Description	This variable indicates if the respective income component has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).	
Method	In the original values can be in	SOEP data there are three types of missing values. These missing terpreted as:
	-1 = no answer of -2 = does not ap -3 = original val	or do not know ply ue was deleted because it was found to be implausible
	The imputation and -3 (.C) only.	procedures was used to fill in missing values represented by -1 (.A)
Format	0 = Not Imputed 1 = Fully Impute	d
	This algorithm o	mits individuals with survey non-responses.

Va	riable Name	IJOB1\$\$	
Va	riable Label	Wages, Salary from main job	
Un	it of Observation	Individual	
Per	riod	Annual	
Des	cription	This variable represents wages or salary from main job of individuals in the household 16 years of age and older.	
Me	thod	Wages or salary from main job is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.	
Fo	rmat	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.	
		The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.	
Alg	orithm	IJOB1\$\$ = (\$P2A02 * \$P2A03)	

Variable Name	IJOB2\$\$	
Variable Label	Income from secondary employment	
Unit of Observation	Individual	
Period	Annual	
Description	This variable represents income from secondary employment of individuals in the household 16 years of age and older.	
Method	Income from secondary employment is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.	
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.	
	The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.	
Algorithm	IJOB2\$\$ = (\$P2C02 * \$P2C03)	

Variable Name	ISELF\$\$
Variable Label	Income from self-employment
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from self-employment of individuals in the house- hold 16 years of age and older.
Method	Income from self-employment is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	ISELF\$\$ = (\$P2B02 * \$P2B03)

Variable Name	IOLDY\$\$
Variable Label	Combined old-age, disability and civil servants pensions
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from combined old-age, disability and civil servants pensions of individuals in the household 16 years of age and older. In 2002 and 2003 separate questions regarding income from private or company pension were asked. Thus these incomes components are not included in old-age, disability and civil servants pensions in the those years.
Method	Income from combined old-age, disability and civil servants pensions is the product of the number of months that income was received in the previous year and the aver- age amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	IOLDY\$\$ = (\$P2D02 * \$P2D03)

Variable Name	IWIDY\$\$
Variable Label	Combined widows and orphans pension
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from combined widows and orphans pension of individuals in the household 16 years of age and older. In 2002 and 2003 separate questions regarding income from private or company pension were asked. Thus these incomes components are not included in widows and orphans pension in the those years.
Method	Income from combined widows and orphans pension is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	IWIDY\$\$ = (\$P2E02 * \$P2E03)

ICOMP\$\$	
Combined company pension (surviving dependants c.p.)	
Individual	
Annual	
This variable represents income from combined company p the household 16 years of age and older. In 1984-2001 and tions related to this topic were not asked. Thus these income old-age, disability and civil servants pensions (IOLDY\$\$) in	pension of individuals in since 2004 specific ques- component is included in the those years.
Income from combined company pension is the product of the income was received in the previous year and the average and If the information about the number of months is missing, variable has been assigned.	ne number of months that nount per month. the sample mean of that
The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.

Algorithm	1984-2001: N/a 2002-2003: IPRVP\$\$ = (\$P2Q02 * \$P2Q03) since 2004: N/a	(\$\$=02-03, \$ = S-T)

Variable Name	IUNBY\$\$
Variable Label	Unemployment benefit
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from unemployment benefit of individuals in the household 16 years of age and older.
Method	Income from unemployment benefit is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned. In case of partial unit-non responding households this information has been imputed. For details see: Frick, Grabka & Groh-Samberg (2010).
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	IUNBY\$\$ = (\$P2F02 * \$P2F03)

Variable Name	IUNAY\$\$
Variable Label	Unemployment assistance
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from unemployment assistance of individuals in the household 16 years of age and older. In 2006 this information is no longer relevant, given that unemployment assistance has been replaced by unemployment benefit II (ALG2\$\$)
Method	Income from unemployment assistance is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	1984-2005: IUNAY\$\$ = (\$P2G02 * \$P2G03) since 2006: N/a

Variable Name	ISUBY\$\$
Variable Label	Subsistence allowance
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from subsistence allowance of individuals in the household 16 years of age and older. In 2015 information about this income has no longer been collected.
Method	Income from subsistence allowance is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	ISUBY\$\$ = (\$P2H02 * \$P2H03) since 2015: N/a

Variable Name	IERET\$\$
Variable Label	Old-age transition benefit
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from old-age transition benefit of individuals in the household 16 years of age and older. This information was collect in 1996-2001 only.
Method	Income from old-age transition benefit is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	1984-1995: N/a 1996-2001: IERET\$\$ = (\$P2I02 * \$P2I03) (\$\$=96 - 01, \$ = M, N,, R) since 2002: N/a

Variable Name	IMATY\$\$
Variable Label	Maternity benefit
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from maternity benefit of individuals in the household 16 years of age and older.
Method	Income from maternity benefit is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned. In case of partial unit-non responding households this information has been imputed. For details see: Frick, Grabka & Groh-Samberg (2010).
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	IMATY\$\$ = (\$P2J02 * \$P2J03)

Variable Name	ISTUY\$\$
Variable Label	Student grants
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from student grants of individuals in the household 16 years of age and older.
Method	Income from student grants is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned. In case of partial unit-non responding households this information has been imputed. For details see: Frick, Grabka & Groh-Samberg (2010).
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	ISTUY\$\$ = (\$P2K02 * \$P2K03)

Variable Name	IMILT\$\$
Variable Label	Military community service pay
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from military community service pay of individuals in the household 16 years of age and older. In 1984-1995 questions related to this top- ic were not asked. Since 2015 information about this income has no longer been col- lected.
Method	Income from military community service pay is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	1984-1995: N/a since 1996: IMILT\$\$ = (\$P2L02 * \$P2L03) since 2015: N/a

Variable Name	IALIM\$\$
Variable Label	Alimony
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from alimony of individuals in the household 16 years of age and older. In 1984-2000 specific questions related to this topic were not asked. Alimony is included in private transfers received (IELSE\$\$) in the those years. Since 2010 alimony and advance child maintenance payments are surveyed separately. Since 2015 information about this income has been no longer collected, but can be found in the variables ICHSU\$\$ and ISPOU\$\$.
Method	Income from alimony is the product of the number of months that income was re- ceived in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	1984-2000: N/a 2001-2009: IALIM\$\$ = (\$P2O02 * \$P2O03) since 2010: IALIM\$\$ = (\$P2S02 * \$P2S03) since 2015: N/a

Variable Name	IACHM\$\$
Variable Label	Advance child maintenance payment
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from advance child maintenance payments of indi- viduals in the household 16 years of age and older. In 1984-2009 specific questions related to this topic were not asked. Advance child maintenance payments is included in private transfers received (IELSE\$\$) in the those years.
Method	Income from advance child maintenance payments is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL.
Algorithm	This algorithm omits individuals with survey non-responses.
Aigoriunn	since 2010: IACHM $$$ = ($P2T02 * P2T03$)

Variable Name	ICHSU\$
Variable Label	Child support, caregiver alimony
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from child support, caregiver alimony of individuals in the household 16 years of age and older. In 1984-2014 specific questions related to this topic were not asked. Child support, caregiver alimony is included in private transfers received (IELSE\$\$) in the those years. In 2016 information about child support and spousal support are now integrated in one variable.
Method	Income from child support, caregiver alimony is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	1984-2014: N/a2015:ICHSU\$\$ = (\$P2U02 * \$P2U03)Since 2016ICHSU\$\$ = (\$P2W02 * \$P2W03)

Variable Name	ISPOU\$\$	
Variable Label	Divorce alimony, during separation	
Unit of Observation	Individual	
Period	Annual	
Description	This variable represents income from divorce alimony, during separation of individuals in the household 16 years of age and older. In 1984-2014 specific questions related to this topic were not asked. Divorce alimony, during separation is included in protect transfers received (IELSE\$\$) in the those years. Since 2016 this information is no longer collected as a single variable (see ICHSU\$).	u- .t- i-
Method	Income from divorce alimony, during separation is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of the variable has been assigned.	of er at
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.	
	The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.	
Algorithm	1984-2014:N/a2015:ISPOU\$\$ = (\$P2V02 * \$P2V03)Sicne 2016:N/a	

Variable Name	IELSE\$\$
Variable Label	Private Transfers received
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from private transfers of individuals in the household 16 years of age and older. In 1984-2000 alimony is included in private transfers. Since 2001 a specific question regarding alimony (IALIM\$\$) were asked, thus alimony is no longer included in private transfers received.
Method	Income from private transfers is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned. In case of partial unit-non responding households this information has been imputed. For details see: Frick, Grabka & Groh-Samberg (2010).
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	IELSE\$\$ = (\$P2M02 * \$P2M03)

Variable Name	IWITH\$\$
Variable Label	Profit Withdrawal
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from profit withdrawal of individuals in the house- hold 16 years of age and older. This information was collected in 2016 and 2017 only.
Method	Income from profit withdrawal is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	1984-2015: N/a 2016-2017: IWITH\$\$ = (\$P2X02 * (\$P2X03) Since 2018: N/a

Variable Name	ISICK\$\$
Variable Label	Sickness benefit
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from sickness benefits of individuals in the house- hold 17 years of age and older. This information was collected since 2021.
Method	Sickness benefits is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	1984-2020: N/a Since 2021: ISICK\$\$ = (\$P2Y02 * (\$P2Y03)

Variable Name	I13LY\$\$
Variable Label	13th monthly salary
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from 13th monthly salary of individuals in the house- hold 16 years of age and older.
Method	Transcribed variable.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses.
Algorithm	I13LY = Y13
	13th monthly salary variable list by survey year - each entry denoted in algorithm as Y13:

Variable Name	IGRV1\$\$
Variable Label	Statutory pension insurance
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from statutory pension insurance of individuals in the household 16 years of age and older. In 1984-1985 specific questions related to this topic were not asked. Since 2002 the statutory pension insurance did also include the social miners insurance pension (ISMP1\$\$) and farmers pension (IAGR1\$\$). In 2016 this information was not asked in subsamples M3/4, in 2017 not for subsample M5.
Method	Income from statutory pension insurance is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned. In case of partial unit-non responding households this information has been imputed. For details see: Frick, Grabka & Groh-Samberg (2010).
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _P and _PKAL.
Algorithm	1984-1985: N/a

Variable Name	ISMP2\$\$
Variable Label	Widows and orphans social miners insurance pension
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from widows and orphans social miners insurance pension of individuals in the household 16 years of age and older. In 1984-1985 and since 2002 specific questions related to this topic were not asked. Since 2002 this income component is included in the statutory pension insurance (IGRV2\$\$).
Method	Income from widows and orphans social miners insurance pension is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _P and _PKAL. This algorithm omits individuals with survey non-responses.

Variable Label	Imputation flag	: for respective income component
Unit of Observation	Individual	
Description	This variable	indicates if income from the respective income component has been
	The predomina row and colum of lacking long For further deta	ant imputation technique used to fill in missing values is based on the in imputation procedure developed by Little and Su (1989). In the case gitudinal data purely cross-sectional imputation techniques are applied. ails, see: Grabka and Frick (2003).
Method	In the original values can be i	SOEP data there are three types of missing values. These missing nterpreted as:
	-1 = no answer -2 = does not a	or do not know pply
	-5 – Originar va	and was deleted because it was found to be implausible
	The imputation and -3 (.C) onl	n procedures was used to fill in missing values represented by -1 (.A) y.
Format	0 = Not Impute 1 = Fully Impu	d ted
	This algorithm	omits individuals with survey non-responses.

Variable Name	FGRV1\$\$ / FGRV2\$\$
Variable Label	Imputation flag: statutory pension insurance / Imputation flag: widows or orphans statutory pension insurance
Unit of Observation	Individual
Description	This variable indicates if income from the respective pension has been imputed. In order to reduce complexity and because of minor incidence, the imputation flag variable FGVR1\$\$ and FGRV2\$\$ encompasses also imputation of item-non-response on any of the considered variables related to (own) pension income.
	The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).
Method	In the original SOEP data there are three types of missing values. These missing values can be interpreted as:
	 -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible
	The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.
Format	0 = Not Imputed 1 = Fully Imputed
	This algorithm omits individuals with survey non-responses.

Variable Name	M11101\$\$	
Variable Label	Whether spent night in hospital in last year	
Unit of Observation	Individual	
Description	Indicates whether person stayed overnight in a hospital at any time in previous year In 1990 and 1993 this information was not asked.	
Method	Transcribed variable.	
Format	 -2 = N/A - Child -1 = Item non-response 0 = Did not stay overnight in a hospital 1 = Stayed overnight in a hospital The original survey variables provided below can be found in the file PL. This algorithm omits individuals with survey non-responses.

Variable Name	P11101\$\$
Variable Label	Overall life satisfaction
Unit of Observation	Individual
Description	This variable indicates the satisfaction with life in general at the time of the survey for all individuals in the household 16 years of age and older.
Method	Individuals are asked to report how satisfied they are with their life in general on a scale of 0 to 10, in which 0 means completely dissatisfied and 10 means completely satisfied.
Format	-2 = N/A - Child -1 = Item non-response 0 = completely dissatisfied,, 10 = completely satisfied
	The original survey variables provided below can be found in the file PL. This algorithm omits individuals with survey non-responses.
Algorithm	gen p11101=-2; replace p11101=plh0182 if plh0182>=0 & plh0182<.; replace p11101=-1 if inlist(plh0182,-1,-3); replace p11101=-5 if plh0182==-5;

Variable Name	W11101\$\$
Variable Label	Individuals Cross-sectional Weight – without 1st wave of a subsample
Unit of Observation	Individual
Description	Indicates the individual's population and sample weight. The individual weight pro- vides a time-series consistent information, which might be used for analyses of in- come and income inequality over time. Given the selectivity built in the answering behavior of first-time respondents with respect to income questions (showing a signif- icant higher share of item-non response which is especially true for a first wave of a new sub-sample), this weighting factor excludes every first wave of a new sub-sample of the SOEP. If all sub-samples will be used, the appropriate variable is W11105\$\$.
Method	Individual weights to compensate for unequal probabilities of selection and sample attrition are necessary to obtain populations based statistics. The individual weights also encompass population weights.
Format	The value of this variable ranges from 0 to 80.000.
	The original survey variables provided below can be found in the file PHRF. This algorithm omits individuals with survey non-responses.
Algorithm	W11101\$\$ = Yphrf

Variable Name	W11102\$\$
Variable Label	Household Weight
Unit of Observation	Household
Description	Indicates the household's sample weight.
Method	Household weights to compensate for unequal probabilities of selection and sample attrition are necessary to obtain populations based statistics.
Format	The value of this variable ranges from 0 to 80.000.
	The original survey variables provided below can be found in the file HHRF. This algorithm omits individuals with survey non-responses.
Algorithm	W11102\$\$ = Yhhrf

Variable Name	W11103\$\$
Variable Label	Inverse staying probability – Respondent Individuals
Unit of Observation	Individual
Description	Indicates the individual's inverse staying probability to derive longitudinal weights.
Method	Longitudinal weights in the SOEP are constructed using inverse staying probabilities. The inverse staying probability is the inverse of the probability that an individual participated in the named year and can be used to generate longitudinal weights.
	To properly weight a balanced sample of individuals represented in five years of the survey (1986 through 1990), for example, create a longitudinal weight by multiplying the individual cross-sectional weight in 1986 by the inverse staying probabilities of the subsequent years 1987, 1988, 1989, and 1990.
	Example: longitudinal weight = W1110186*W1110387*W1110388*W1110389*W1110390
	The created longitudinal weight should be used with any longitudinal sample.
Format	N/A
	The original survey variables provided below can be found in the file PHRF. This algorithm omits individuals with survey non-responses.
Algorithm	1984: N/A since 1985: W11103\$\$ = Ypbleib
