#### **1      Supplementary Figures and Tables**

**Table A.1:** Overview of measures and data sources

Variable (Source parentheses)	Definitions and details
<b>Dependent variable</b>	
Gender-typing of occupational expectation (metric) (PISA 2006, PISA 2018, ILO Segregate Database)	Share of women in each occupational category (ISCO 88 3-digit) in every country aspired by 15-year-old girls and boys at the age of 30 based on PISA 2006 and 2018 data merged with data from nationally representative labor force statistics mainly for the year 2000/2001.
Gender-typing of occupational aspiration (categorical) (PISA 2006, PISA 2018)	“female-dominated occupation” (share of women in occupation 70 percent and above) “gender-balanced occupation” (share of women in occupation more than 30 and less than 70 percent) “male-dominated occupation” (share of women in occupation 30 percent and below)
<b>Independent variables</b>	
<i>Country-level variables</i>	
Female to male employment rate (ILO Segregate Database)	Women’s employment rate in 2006 and 2018.
Women in Parliament (Global Gender Gap Report 2006 & 2018)	Female-male ratio in national parliaments (females/males)
Women in Management (ILO Segregate Database)	Female rate in management positions
Dissimilarity Index (ILO Segregate Database)	Proportion of women (or men) who would need to change their occupation in order to achieve an occupational sex composition that equals the sex composition of the labor market. $D = \sum_{j=1}^J  (F_j   F) - (M_j   M)  \times 100 \times \frac{1}{2}$ F <sub>j</sub> = N women in occupation j F = N women in the labor force M <sub>j</sub> = N men in occupation j M = N men in the labor force
Gender norms (European and World values survey 1999 & 2008, Norway 1996 & 2008)	Indicator of attitudes towards the gender roles based dichotomized country mean of the following item: “A working mother can establish just as warm and secure a relationship with her children as a mother who does not work”
Survival/self-expression values (World Value Survey 1999 & 2017)	The self-expression index is based on Inglehart and Welzel (2005). We use a short index including the items of “Y002: Post-Materialist” (Index with items), “F118: Justifiable: Homosexuality” and “F120: Justifiable: Abortion”
Gross Domestic Product (GDP) (World Bank)	Gross domestic product per capita in 2006 and 2018, current prices in US dollars
<i>Individual-level variables</i>	
Socioeconomic status (PISA 2006, PISA 2018) <sup>1</sup>	Index of economic, social, and cultural status (ESCS), as provided by PISA
Migration status (PISA 2006, PISA 2018) <sup>1</sup>	Dummy variable 0 “native” 1 “first- and second-generation migrant”
Mathematical competencies, Science competencies, Reading competencies (PISA 2006, PISA 2018) <sup>1</sup>	Plausible value in math literacy, science literacy, reading literacy; metric variable
Mother’s occupation, Father’s occupation (PISA 2006, PISA 2018) <sup>1</sup>	Categorical variable: “female-dominated” (>= 70% women), “male-dominated” (<= 30% women), and “gender-balanced” (> 30% and < 70% women) occupations; “unknown” all cases with missing information are in a fourth category.

<sup>1</sup> Student questionnaire

**Table A.2:** Overview of country variables means by country and year

\*\*\* p<0.01, \*\* p<0.05, \* <0.1

The results are based on the linear regression model with and clustered standard errors for the schools as a cell mean model for the country variable. In this method, all countries are included in the model and no reference category is used. For this, we used in stata the “.ibn” operator and the “noconstant” option for the regression.

The results are based on the linear regression model with and clustered standard errors for the schools as a cell mean model for the country variable. In this method, all countries are included in the model and no reference category is used. For this, we used in stata the “.ibn” operator and the “noconstant” option for the regression.

**Table A.10:** Change in the dependent variable between 2006 and 2018

	Share of Females		Female-dominated		Male-dominated		Gender-balanced
