SOEP Survey Papers
Series D – Variable Descriptions and Coding

SOEP-IS 2023 – BIOBIRTH: Birth Biography of Female and Male Respondents

SOEP-IS Group

Running since 1984, the German Socio-Economic Panel (SOEP) is a wide-ranging representative longitudinal study of private households, located at the German Institute for Economic Research, DIW Berlin.

The aim of the SOEP Survey Papers Series is to thoroughly document the survey's data collection and data processing. The SOEP Survey Papers is comprised of the following series:

Series A – Survey Instruments (Erhebungsinstrumente)
Series B – Survey Reports (Methodenberichte)
Series C – Data Documentation (Datendokumentationen)
Series D – Variable Descriptions and Coding
Series E – SOEPmonitors
Series F – SOEP Newsletters
Series G – General Issues and Teaching Materials

The SOEP Survey Papers are available at <http://www.diw.de/soepsurveyspapers>

Editors:

kidgeb10 – Year Of Birth 10th. Child	30

1 Population and purpose of the data set BIOBIRTH

The file BIOBIRTH covers the following information:

- (1) sum, year of birth and sex of the biological children of a male/female respondent up to the last date of interview
- (2) Person identifier (KIDPNR[n]) of the children (provided the child can be identified) which corresponds to variable PID in file PPFAD.

BIOBIRTH is based on every male/female respondent who has ever had at least one successful SOEP or IS interview. For each of these respondents, the data set BIOBIRTH documents the birth biography with one row per respondent in the dataset. The annual update focuses on including information on new births collected in the individual questionnaire or in the biographical questionnaire. Furthermore respondents who have been interviewed for the first time but who gave no information on births yet are included. The latter are either new household members or teenagers who have reached the required minimum for a SOEP-IS participation (16 years). For that reason BIOBIRTH can be described as an accumulative data set, in which the entire birth biography of all SOEP-IS respondents is presented.

2 Structure of the data set

BIOBIRTH contains the following variables for all male/female respondents:

- CID Invariable number of the original household
- PID Invariable personal number of the male/female respondent
- BIOVALID Status of the birth biography:
10: no birth biographical entries.
20: youth biography questionnaire completed, no children in biography.
30: birth biography questionnaire completed, no children in biography.
31: birth biography questionnaire completed, one or more children in biography.
- BIOYEAR Year of the survey of the birth biography, respectively “-2” for respondents without information stemming from this special survey instrument.
- BIOAGE Age of the respondent at the time of the birth biography survey. If no birth biographical information is available yet, the age at the very first survey is indicated.
- SUMKIDS Total number of children born (more precisely: total number of children identifiable within SOEP-IS by merging all available data up to the time of the last observation).
- BIODKIDS Total number of children identified through the birth biography. For respondents who haven't filled in the birth biographical questionnaire yet, the code “-2” applies.
- KIDGEB[n] Year of birth of the children (for the first child up to the fifteenth child).
- KIDSEX[n] Sex of the children (for the first child up to the fifteenth child).
- KIDPNR[n] Personal number of the children (for the first child up to the fifteenth child), in so far as it is identifiable in the SOEP-IS.
- KIDMON[n] Month of birth of a child (for the first child up to the fifteenth child).

For the variables KIDGEB[n], KIDSEX[n], KIDPNR[n], and KIDMON[n] identical missing codes apply: The code “-2” is assigned if there's no [n]th child found for this male/female parent. The code “-1” applies if information about the [n]th child is found but information about the year of birth or the sex is missing or the child could not be identified by a personal identifier (“pid”) within the SOEP-IS.

For every male/female respondent, a maximum of 15 entries for children is provided, although the biography questionnaire enables only ten possible entries regarding birth information. If there have been additional births up to the time the biography questionnaire is

collected, they are recorded separately by the interviewer and are included in BIOBIRTH. The sequence of children within BIOBIRTH is recorded with regards to the age of the children. The oldest child is recorded under KIDPNR01 the second oldest under KIDPNR02 and so on. If the age is missing the lowest personal identifier applies.

3 Information basis of the birth biography

The main basis of the individual birth biography in BIOBIRTH is normally the information collected by the biography questionnaire, in which the number, year of birth and sex of the biological children for every male/female respondent are collected. For respondents with information on children stemming from the biography questionnaire the BIOVALID code “31” is assigned. Respondents who completed this questionnaire but did not report on any births receive the code “30”. In addition, the variable BIOAGE contains the age at the time of the collection of the life history. Apart from this one-time collection within the scope of the first SOEP interview, there is no other possibility in SOEP to collect information on the number, the residence status, or if appropriate, the year of death of children who were born before the first SOEP-IS interview.

A minority of male/female respondents have no information from the biographical questionnaire due to several reasons. In this cases the variable BIOVALID has the code “10” and the variable BIOAGE contains the age at the first time of SOEP-IS interview. The group can be divided into different sub-populations and is in principle affected by the risk of underestimating the total number of births:

- Respondents who were at the time of the first interview only 16 years old. In most cases these respondents participate at a later date in the biography survey. Thus, the parent-child relationship recorded earlier in BIOBIRTH can be checked later with the birth biography.
- Respondents who are 30 years old or younger at the first interview. In this sub-population, children are not yet adults and live in most cases in the parents’ household. Since information from the biographical questionnaire is missing, a final distinction in social and biological children is not possible.
- Respondents who are over 30 years old at the time of the first interview. Some of the children don’t live any more in the parents’ household at the time of the first interview and therefore they are not part of the survey population. For that reason the number of biological children might be underestimated in this group of respondents (over 30 years) to a larger extent compared to younger respondents.

4 A source of biographical information (waves O to BB) - the youth questionnaire

The youth questionnaire is handed out in the waves O to BB, whereas SOEP-IS does not provide this questionnaire. With regard to wave O to BB, 74 female and 71 male respondents filled out the youth questionnaire. In view of the relatively small number of cases in SOEP-IS, further information are provided in BIOBIRTH documentation of the SOEP. Nevertheless, a few changes to the BIOBIRTH data-set have to be outlined:

- In the variable BIOVALID a new code (“20”: “youth biography questionnaire completed”) is added. As the youth questionnaire doesn’t contain any information about own children the addendum “no children in biography” is always added to the code “20”.
- While calculating the age at the time of the biographical questionnaire (BIOAGE), the age upon completion of the youth questionnaire is applied.

- The variable BIODIDS always remains at zero as no biographical information on parenthood can be derived from the youth-biography (in this cases no missing code is applied in BIODIDS).

5 Identification process of the children in the SOEP data base

The starting point for the process of identifying children is the relationship of a household member to the head of the household (HH) (variable STELL in the file PBRUTTO). There are only certain combinations among household members in which a biological parent-child relationship among an adult and another person can be assumed.

For the remaining unassigned children within a household a thorough check is performed to scan for parent-child ties that can be derived from more complex household relationships. It should be noted here that the larger the number of persons living in a household, the more complicated the relationships become among the individual household members. For that reason only the combination of the information from the biography questionnaire with the information from PBRUTTO (and in most cases the mother indicator K_PMUM provides the most reliable definition of a biological mother-child relationship.

6 General interview information
