Nominal and real effective krone rate indices for Denmark 1875-2002

Abstract

This paper constructs annual trade-weighted nominal and real effective exchange rate indices for Denmark covering the period since the introduction of the krone as the Danish currency unit in 1875. Two real effective krone rate indices with respectively wholesale prices and consumer prices used as deflators are calculated. All indices are constructed as geometrically weighted chain indices with current trade weights based on Denmark's foreign trade in goods with 15 of its largest trading partners. During each year in the period since 1875 these 15 countries accounted for at least 78 per cent of Denmark's total foreign trade in goods.

Key words: Danish krone exchange rates; Effective exchange rates; History of exchange rates.

JEL Classification: F31; N23; N24.

Resumé

I dette papir udarbejdes årlige handelsvægtede nominelle og reale effektive valutakursindeks for Danmark dækkende perioden siden kronen blev indført som dansk møntenhed i 1875. Der udarbejdes to indeks for den reale effektive kronkurs med henholdsvis forbrugerpriser og engrospriser som deflatorer. Alle indeks er beregnet som geometrisk vejede kædeindeks med løbende vægte baseret på Danmarks udenrigshandel med 15 større handelspartnere. I hvert eneste af årene siden 1875 tegnede disse 15 lande sig for mindst 78 pct. af Danmarks vareomsætning med udlandet.

1. Introduction

In the foreign exchange market a wide range of different currencies are traded against each other. Within a certain period of time a currency may be strengthened against some currencies and weakened against other. Since the breakdown of the Bretton Woods fixed-exchange-rate system, effective exchange rates has been a common measure to summarise the movements in the value of a currency vis-à-vis other currencies and to assess the development in the level of competitiveness.

The aim of this paper is to construct annual trade-weighted nominal and real effective krone rates since the introduction of the krone as the Danish currency unit in 1875.² The data have been compiled in relation to a study on effective krone rates and purchasing power parity for Denmark 1875-2002.³

The paper is organised as follows: Section 2 summarises the history and methodology of Danmarks Nationalbank's use and calculation of effective krone rates. Section 3 presents long historical annual time series on nominal and real effective krone rates. Two real effective krone rate indices with respectively wholesale prices and consumer prices used as deflators are calculated. The indices are constructed as geometrically weighted chain indices with current trade weights based on Denmark's foreign trade in goods with 15 of its largest trading partners (Germany, U.K., Ireland, Sweden, Norway, U.S.A., France, Spain, Italy, Portugal, Belgium-Luxembourg, the Netherlands, Japan, Finland, and Switzerland). During each year in the period 1875-2001 these 15 countries accounted for at least 78 per cent of Denmark's total foreign trade in goods. Section 3 also compares the real exchange rate indices with the development in Denmark's terms of trade. Finally, section 4 indicates areas for further research. All background data behind this study are listed in appendix 1, while appendix 2 outlines the sources and compilation methods.

2. Danmarks Nationalbank's nominal and real effective krone rate indices

Danmarks Nationalbank (the Nationalbank) first presented effective exchange rate calculations in its annual Report and Account from 1971 in relation to an assessment of the consequences of the Smithsonian Agreement.

² For a short and fact oriented chronology of the Denmark's exchange-rate policy since the introduction of the krone as the Danish currency unit in 1875, cf. Abildgren, K. A chronology of Denmark's exchange-rate policy 1875-2003, *Danmarks Nationalbank Working Paper*, No. 12, April 2004.

³ Cf. Abildgren, K., An empirical examination of the purchasing-power-parity hypothesis for Denmark 1875-2002, *Danmarks Nationalbank Working Paper*, No. 14, April 2004.

Today the Nationalbank publishes an index for the nominal effective krone rate (NEKR) each banking day.⁴ Currently (March 2004) the Nationalbank's NEKR index is compiled by weighting (geometrically) the development in indices for the bilateral value of one krone vis-à-vis the currencies of 25 different countries⁵ using a set of fixed weights based on trade in manufactured goods in 1995. An increase in the NEKR index describes an overall appreciation of the krone vis-à-vis the currencies of Denmark's main trading partners. From time to time the weights are recalculated and new currencies included reflecting changes in trade patterns.⁶

Also real effective krone rates indices based on consumer price indices (REKRCPI), hourly earnings, unit labour costs, and total hourly wage costs are regularly calculated by the Nationalbank.⁷ A real effective krone rate index is an index for the relative price or cost development in Denmark vis-à-vis its main trading partners measured in a common currency. The Nationalbank's real effective krone rate indices can be interpreted as indicators of the development in the level of competitiveness of the manufacturing sector in Denmark. An increase in a real effective krone rate index describes a real appreciation of the krone.

Time series for the NEKR covering the period since 1955 has been released by the Nationalbank in relation to research-oriented work.⁸ Figures for REKRCPI compiled by the Nationalbank are available for the period since 1970.⁹ For the period before 1955 respectively 1970, no "official" figures for the NEKR and REKRCPI are available.

3. Nominal and real effective krone rate indices 1875-2002

In order to study the development of the effective krone rate for a longer period than covered by the official figures, a historical index for the average annual nominal effective krone rate (HNEKR) covering the whole period 1875-2002 has been calculated, cf. appendix 1 and 2.

⁴ Cf. Danmarks Nationalbank's website (www.nationalbanken.dk).

⁵ 11 of these are euro-area countries.

⁶ The weights used in the Nationalbank's NEKR index are based on so-called double-weighted export weights and bilateral import weights, cf. Pedersen, E. H., Revision of the Weights for Calculation of the Nationalbank's Effective Krone Rate Index, *Danmarks Nationalbank Monetary Review*, 2nd Quarter 1998, 26-40; and Ølgaard, C., The Effective Krone Rate and Competitiveness, *Danmarks Nationalbank Monetary Review*, February 1992, 8-15. The double-weighted export weights take into consideration that Danish firms compete with a country not only on that country's domestic market but also on international markets. When weights are revised, the new index is chained to the previously published NEKR index at the time or close to the time for change of weights. Usually, this implies that no revisions are made to previously published figures or, alternatively, that only a few of the previously published figures are revised.

⁷ Cf. Pedersen, E. H., Real Effective Exchange Rates, *Danmarks Nationalbank Monetary Review*, May 1996, 33-45. Pedersen, *op. cit.*, also discuss the benefit and drawbacks relating to the choice of price or wage indices as deflators in real effective exchange rate indices. The Nationalbank first presented real effective krone rate calculations based on hourly earnings in its Report and Account from 1977.

⁸ Cf. Blomgren-Hansen, N. & Petersen, J., Arbejdsmarked og betalingsbalance, *Nationaløkonomisk tidsskrift*, Vol. 115, 1977, 375-394.

⁹ The price deflators (CPI-inflation in Denmark and the weighted CPI-inflation abroad) are presented in Christensen, A. M., Price Increases and Inflation, *Danmarks Nationalbank Monetary Review*, February 1994, 9-13.

Methodologically the main differences between the NEKR and the new HNEKR are the following:

- In order to reflect the changes in trade patterns on a current basis, the HNEKR is calculated as a geometrically weighted chain index with current weights (and not fixed weights as in the NEKR) based on annual trade statistics for each year since 1875.
- The HNEKR is based on Denmark's total foreign trade in goods (and not only trade in manufactured goods as in the NEKR) in order to cover trade in agricultural products etc. as well.
- The weights used for the HNEKR are based on trade with 15 (compared to 25 in the NEKR) of the largest trading partners in the period 1875-2001. The 15 countries are: Germany, U.K., Ireland, Sweden, Norway, U.S.A., France, Spain, Italy, Portugal, Belgium-Luxembourg, the Netherlands, Japan, Finland, and Switzerland. During each year in the period 1875-2001 these 15 countries accounted for at least 78 per cent of Denmark's total foreign trade in goods.¹⁰
- The weights in the HNEKR are based on the sum of total bilateral imports and exports of goods vis-à-vis the above mentioned countries (i.e. export is not double-weighted as is the case in the NEKR).

In addition to the HNEKR, a CPI-based historical real effective krone rate index (HREKRCPI) covering the whole period 1875-2002 has also been compiled following the same methods of calculation as those used for the derivation of the HNEKR index, cf. appendix 1 and 2.

Even though the methodology used to compile historical CPI data (or private consumption deflators) are by no means harmonised across countries, they are probably among the best historical statistics available due to the intensive research in historical cost-of-living conditions and national-income accounting. There are, however, several problems related to the use of consumer price indices as deflators in real effective exchange rate indices if the aim is to study developments in the level of competitiveness or e.g. assess the validity of the purchasing-power-parity hypothesis. Firstly, the CPI includes a substantial amount of goods and services that are not traded internationally, and secondly the development in the CPI is influenced by changes in indirect taxes and subsidies.

As a supplement an alternative historical real effective krone rate index based on wholesale price indices¹¹ (HREKRWPI) has also been compiled following the same methodology as for the HREKRCPI, cf. appendix 1 and 2. The coverage of historical wholesale price indices

¹⁰ The 15 countries in the HNEKR cover 97.8 per cent of the 1983-weighting basis in the NEKR. For the 1989- and 1995-weighting basis the corresponding figures are respectively 96.4 and 93.3 per cent.

probably differs even more across countries than that of consumer price indices. However, they are conceptually interesting in relation to e.g. studies of the purchasing-power-parity hypothesis since they normally include relatively few non-traded goods. Furthermore, wholesale price indices normally also exclude most indirect taxes (apart from custom duties) and subsidies.

Chart 1 shows the development in the “official” nominal effective krone rate index (NEKR) and the historical nominal effective krone rate index (HNEKR) for the period since 1955. The short-term development in the two series seems to be roughly parallel. The differences in the long-term development are larger due to the different methods of calculation mentioned above.

The main part of the differences between the two nominal effective krone rates in chart 1 can be attributed to the use of current weights in HNEKR. Chart 2 shows the official nominal effective krone rate index (NEKR) together with an index (HNEKRDNW) calculated on basis of the 15 countries in the HNEKR and the weights from NEKR. There are practically no differences between the development in the two series in chart 2.

Chart 3 shows the development in the “official” real effective krone rate index based on consumer prices (REKRCPI) and the corresponding historical series (HREKRCPI) for the period since 1970. As was the case with the nominal indices the short-term development in the two real indices seems to be roughly parallel, whereas the differences in the long-term development are larger due to the different methods of calculation.

Chart 4 shows the development in the historical real effective krone rate index based on consumer prices (HREKRCPI) as well as on wholesale prices (HREKRWPI) for the whole period 1875-2002. Furthermore the chart contains an index for the terms of trade (TOT)¹². The two historical real effective krone rate indices show a marked drop followed by a sharp increase around the period with hyperinflation in Germany at the beginning of the 1920s. The reason is that German inflation began to rise before the German exchange rate depreciated (at least in these series based on annual averages). The long-term developments in the two historical real effective krone rate indices are roughly parallel. However, for the post-1950 period the index based on consumer prices shows the largest appreciation. The reason is that the ratio between consumer prices and wholesale prices for this period has increased more in Denmark than abroad, cf. chart 5.

Finally chart 6 shows the development in the historical nominal effective krone rate and the price development abroad relative to Denmark in the pre-1914 period, while Chart 7 covers

¹¹ I.e. price indices for domestic producer prices and import prices excluding indirect taxes and subsidies.

¹² The terms-of-trade index is compiled as an index for export unit values divided by an index for import unit values. The terms-of-trade index can be considered as a real effective krone rate index based on the actual prices in

the post-1923 period. In the pre-1914 period where Denmark and all its main trading partners were on the Gold Standard the variation in both the nominal effective krone rate and the relative price development was very limited, implying only modest fluctuations in the real effective krone rate indices, cf. also chart 4. The post-1923 period has shown much larger fluctuation in both the nominal effective krone rate and the relative price development, and the real effective krone rate.

4. Scope for further research

The nominal and real effective exchange rate indices compiled in this paper cover the period since the introduction of the krone as the Danish currency unit in 1875. Even though data for Denmark's foreign trade become more sparse for the period before 1875 it would be interesting to make an attempt to extend the time series somewhat backward in time in order to explore the behaviour of the effective rigsdaler rate during part of the silver standard period.

the foreign trade that takes into account not only the actual geographical distribution but also the actual goods composition of the foreign trade activities.

Appendix 1: Data

Table A.1: Bilateral exchange rates 1875-2002, Danish kroner per unit

Year	German mark	British pound	Swedish kronor	Norwegian kroner	U.S. dollars	French francs

J., *Rational Expectations and Inflation*, New York: Harper & Row 1986; Shimazaki, M. & Solomou, S., Effective exchange rates in Japan 1879-1938, *Japan and the World Economy*, Vol. 13, 2001, 161-177; Statistics Denmark, *50-year review*, Copenhagen: Statistics Denmark 1995; and Tattara, G., Paper money but a gold debt: Italy on the gold standard, *Explorations in Economic History*, Vol. 40, 2003, 122-142.

Comments:

(1) Annual averages. (2) Some of the exchange rates are for some periods computed as cross-rates based on an assumption of perfect international arbitrage. (3) For certain periods, mainly around World War I and II, the stated exchange rates are clearing rates etc. and not market related rates. (4) With effect from 1999 the exchange rates for Deutsche mark, Belgian francs,

French francs, Dutch guilders, Irish pounds, Italian lire, Portuguese escudos and Spanish pesetas are calculated on basis of the euro exchange rate vis-à-vis Danish kroner and the irrevocable fixed exchange rates between euro and the above mentioned currencies on 1 January 1999. (5) In the period from January 1875 and up to and including June 1914 the exchange rate vis-à-vis the Swedish krona is assumed to be equal to the parity (1.00) due to the Scandinavian Currency Union. (6) In the period 1875-1912 the Belgian franc and Swiss franc exchange rates are assumed to be equal to the French franc exchange rate utilising the fact that Belgium and Switzerland were members of the Latin Currency Union and kept their exchange rates fixed vis-à-vis the French franc. (7) By the end of 1958 France introduced a new currency unit with 1 new Franc equal to 100 old Francs. The exchange rates for France up to and including 1958 has been adjusted to the new basis in order to ensure comparability across time. (8) German mark covers the gold Reichsmark/paper Reichsmark mark in the period January 1875 - November 1923, Rentenmark [1 Rentenmark equivalent to 1,000,000,000,000 paper Reichsmark] in the period December 1923 – August 1924, the new Reichsmark [1 new Reichsmark equivalent to one Rentenmark] in the period September 1924-May 1948 and Deutsche mark¹³ in the period June 1948- December 1998. The exchange rates for Germany for the period January 1875 – November 1923 has been adjusted to the subsequent basis in order to ensure comparability across time. (9) A separate quotation of the Irish pound was initiated in March 1979. In the period since the introduction of the Irish pound in 1922 and until March 1979 the Irish pound was equal to the British pound. (10) In the period from March 1927 to August 1945 Belgium used the belga (1 belga = 5 Belgian francs) as the monetary unit in foreign-exchange transactions. The exchange rate data for this period has been transformed to the Belgian franc basis in order to ensure comparability across time. (11) Exchange rate quotations for Portugal in the period 1875-1913 are in Portuguese Mil Reis (1 Portuguese Mil Reis = 1 Portuguese Escudo). (12) In the beginning of 1963 Finland introduced a new currency unit with 1 new Finnish markka = 100 old Finnish markka. The exchange rates up to and including 1962 have been adjusted to the subsequent basis in order to ensure comparability across time. (13) Due to missing observations the following exchange rates have been interpolated: Italian lira (1944-1945); Portuguese escudos (1915, 1919-1920, 1942-1945); Belgian francs (1915-1918); and Japanese yen (1942-1947).

¹³ At the currency reform in 1948 establishing the Deutsche Mark, West Germans could exchange 60 Reichsmarks for 60 Deutsche Mark. Most other conversions were made at a ratio of 1 Deutsche Mark for 10 Reichsmarks. The exchange rate between the U.S. dollar and the new Deutsche mark was maintained equivalent to the old U.S. dollar-Reichsmark exchange rate, cf. Deutsche Bundesbank (edt.), *Fifty Years of the Deutsche Mark*, Oxford: Oxford University Press 1999; and Hetzel, R. L., German Monetary History in the Second Half of the Twentieth Century, Federal Reserve Bank of Richmond, *Economic Quarterly*, Vol. 88, Spring 2002, 29-64.

Foreign Trade Statistics

Sources:

Various issues of: Statistics Denmark, *Statistisk tabelværk*; Statistics Denmark, *Statistical ten-year review*; and Statistics Denmark, *Statistical Yearbook*. Other sources: Johansen, H. C., *Danish historical statistics 1814-1980*, Copenhagen: Gyldendal 1985; Statistics Denmark, *50-year review*, Copenhagen: Statistics Denmark 1995; Statistics Denmark, *50-year review*, 2nd Edition, Copenhagen: Statistics Denmark 2001.

Comments:

(1) Covers trade in goods. (2) Including transit trade in the periods 1875-1909 and 1959-1977. (3) Change to special trade in 1937. (4) Before 1920 Germany includes Danzig and the northern part of the old Duchy of Schleswig. (5) For the years 1938 (partly) and 1939 Germany includes Austria. (6) For the years 1942-1944 Germany includes Böhmen-Mähren. (7) Import figures are cif-values. (8) All figures are in current prices.

The Nationalbank's nominal effective krone rate index (NEKR) and real effective krone rate index based on consumer prices (REKRCPI)

Sources:

Various issues of: Danmarks Nationalbank, *Financial Statistics*; Danmarks Nationalbank, *Monetary Review*; Other sources: Blomgren-Hansen, N. & Petersen, J., Arbejdsmarked og betalingsbalance, *Nationaløkonomisk tidsskrift*, Vol. 115, 1977, 375-394; Christensen, A. M., Price Increases and Inflation, *Danmarks Nationalbank Monetary Review*, February 1994, 9-13.

Comments:

(1) For the period 1970-2002 the NEKR and REKRCPI are compiled using double-weighted export weights, bilateral import weights and geometrically weighting. The period since 30 May 1997 is based on weights calculated from trade statistics for 1995 (covering trade with 25 countries). For the period 1 January 1992 to 29 May 1997 the weights are based on 1989 trade statistics (21 countries). For the period 1970-1992 the weights are based on 1983 trade statistics (17 countries). (2) For the period 1955-1970 the NEKR is based on 13 countries, but the weight base years and weighting methodology are unknown to the author of this paper.

Historical nominal effective krone rate index (HNEKR)

The Historical Nominal Effective Krone Rate (HNEKR) index is calculated as a geometrically weighted chain index with current weights based on annual trade statistics. Currencies from 15 countries are included in the index (Germany, U.K., Ireland, Sweden, Norway, U.S.A., France, Spain, Italy, Portugal, Belgium-Luxembourg, the Netherlands, Japan, Finland and Switzerland). The relative change in the HNEKR index is given by:

$$\frac{\text{HNEKR}_t}{\text{HNEKR}_{t-1}} = \prod_{i=1}^n \left(\frac{\text{BE}_t^i}{\text{BE}_{t-1}^i} \right)^{w_{t-1}^i} \quad \text{where} \quad \sum_{i=1}^n w_{t-1}^i = 1$$

where BE_t^i is the Bilateral Exchange rate between Danish kroner and currency i in year t (amount of foreign currency i per Danish krone) and w_{t-1}^i is the weight used for the change in currency i from year $t-1$ to year t based on the sum of the Danish bilateral imports and exports of goods in year $t-1$ vis-à-vis country i relative to the total Danish imports and exports of goods vis-à-vis the 15 countries mentioned above. Changes in the currencies from 1875 to 1876 are thus weighted with trade weights reflecting the trade pattern in year 1875 etc.

An increase in the HNEKR index describes an overall appreciation of the krone vis-à-vis the currencies of Denmark's main trading partners.

Comments:

(1) Japan and Switzerland are included in the calculations with effect from 1914. (2) Finland is included in the calculations with effect from 1920.

Consumer Price Indices (CPI)

Sources:

Various issues of: Danmarks Nationalbank, *Financial Statistics*; Danmarks Nationalbank, *Monetary Review*; IMF, *International Financial Statistics*; OECD, *Economic Outlook*; Statistics Denmark, *Statistical ten-year review*; Statistics Denmark, *Statistical Yearbook*. Other sources: Christensen, A. M., Price Increases and Inflation, *Danmarks Nationalbank Monetary Review*, February 1994, 9-13; Kærgård, N., *Økonomisk vækst. En økonometrisk analyse af Danmark 1870-1981*, Studie nr. 33 fra Københavns Universitets Økonomiske Institut, Copenhagen: Jurist- og Økonomforbundets Forlag 1991; Maddison, A., *Phases of Capitalist Development*, Oxford: Oxford University Press 1982; Maddison, A., *Dynamic Forces in Capitalist Development. A Long-Run Comparative View*, Oxford: Oxford

University Press 1991; Mitchell, B. R., *International Historical Statistics. Africa, Asia & Oceania 1750-1993*, Third Edition, London: Macmillan 1998; Mitchell, B. R., *International Historical Statistics. Europe 1750-2000*, Fifth Edition, London: Palgrave Macmillan 2003; Rodriguez, A. L., Terms-of-trade variability and adherence to the gold standard. The cases of Portugal and Spain, chapter 10 in: Marcuzzo, M. C., Officer, L. H. & Rosselli, A. (eds.), *Monetary Standards and Exchange Rates*, London: Routledge 1997.

Comments:

(1) As a general rule the figures show year-on-year increases in annual averages indices. However in some cases the figures show year-on-year increases in a selected month. (2) Spain: Wholesale price inflation in the period 1876-1914 and 1936-1940. Retail price inflation in Madrid 1915-1935. (3) The annual rate of CPI inflation for Portugal in the years 1914-1927 is assumed to be constant at a rate calculated on basis of the value of the CPI index in 1929 and 1913 and the wholesale price index for the years 1927-1929. (4) CPI inflation for Portugal 1930-1976 is based on cost-of-living in Lisbon. (5) The annual rate of CPI inflation for Belgium in the year 1914 is assumed to be equal to the average rate of inflation in 1913 and 1915. (6) The annual rate of CPI inflation for Belgium in the years 1941-1946 is assumed to be constant at a rate calculated on basis of the value of the CPI index in 1946 and 1940. (7) Denmark: Annual increase in private consumption deflator before 1915. (8) Japan: Wholesale price inflation 1876-1879. (9) Finland: Wholesale price inflation 1879-1914. (10) Switzerland: Wholesale price inflation 1876-1890.

Historical real effective krone rate index based on consumer prices (HNEKRCPI)

The Historical Real Effective Krone Rate index based on Consumer Price Indices (HREKRCPI) is calculated as follows:

$$\text{HREKRCPI}_t = \frac{\text{HNEKR}_t \cdot \text{CPI}_t^{\text{Denmark}}}{\text{CPI}_t^{\text{Abroad}}}$$

where HNEKR_t is the Historical Nominal Effective Krone Rate index in year t , $\text{CPI}_t^{\text{Denmark}}$ is the Consumer Price Index for Denmark in year t and $\text{CPI}_t^{\text{Abroad}}$ is the Consumer Price Index for Denmark's main trading partners in year t calculated as a geometrically weighted chain index with current weights based on annual trade statistics. The relative change in the $\text{CPI}_t^{\text{Abroad}}$ index is given by:

$$\frac{CPI_t^{\text{Abroad}}}{CPI_{t-1}^{\text{Abroad}}} = \prod_{i=1}^n \left(\frac{CPI_t^i}{CPI_{t-1}^i} \right)^{w_{t-1}^i} \quad \text{where} \quad \sum_{i=1}^n w_{t-1}^i = 1$$

where CPI_t^i is the Consumer Price Index for country i in year t and w_{t-1}^i is the weight used for the change in the Consumer Price Index for country i from year $t-1$ to year t based on the sum of the Danish bilateral imports and exports of goods in year $t-1$ vis-à-vis country i relative to the total Danish imports and exports of goods vis-à-vis the previously mentioned 15 countries. Changes in the CPI_t^{Abroad} index from 1875 to 1876 is thus weighted with trade weights reflecting the trade composition in year 1875 etc.

An increase in the HREKRCPI index describes an overall real appreciation of the krone vis-à-vis the currencies of Denmark's main trading partners.

Comments:

(1) Japan and Switzerland are included in the calculations with effect from 1914. (2) Finland is included in the calculations with effect from 1920.

Wholesale Price Indices (WPI)

Sources:

Various issues of: IMF, *International Financial Statistics*; OECD, *Main Economic Indicators*; Statistics Denmark, *Statistical Yearbook*; Statistics Denmark, *Statistical ten-year review*. Other sources: Hardach, G., *The First World War 1914-1918*, The Pelican History of World Economy in the Twentieth Century, Harmondsworth, Middlesex: Penguin 1987; Hoffmeyer, E., *Strukturændringer på penge- og kapitalmarkedet. Et studie i anledning af sparekassernes 150 års jubilæum*, Copenhagen: Sparevirkes Forlag 1960; Johansen, H. C., *Danish historical statistics 1814-1980*, Copenhagen: Gyldendal 1985; Maddison, A., *Dynamic Forces in Capitalist Development. A Long-Run Comparative View*, Oxford: Oxford University Press 1991; Mitchell, B. R., *International Historical Statistics. Africa, Asia & Oceania 1750-1993*, Third Edition, London: Macmillan 1998; Mitchell, B. R., *International Historical Statistics. The Americas 1750-1993*, Fourth Edition, London: Macmillan 1998; Mitchell, B. R., *International Historical Statistics. Europe 1750-2000*, Fifth Edition, London: Palgrave Macmillan 2003; Sargent, T. J., *Rational Expectations and Inflation*, New York: Harper & Row 1986.

Comments:

(1) As a general rule the figures show year-on-year increases in annual averages indices. (2) The German WPI excludes indirect taxes with effect from 1968. (3) The annual rate of WPI inflation in Germany for the years 1945-1949 is assumed to be constant at a rate calculated on basis of the value of the WPI index in 1944 and 1949. (4) In the case of Norway 1876-1891: Consumer price inflation. (5) France 1986-1999: Simple average of the annual percentage change in the consumer price index and the producer price index for intermediate goods. (6) The Italian WPI includes VAT with effect from 1973. (7) Portugal 1876-1927 and 1987-2000: Consumer price inflation. (8) The annual rate of WPI inflation in Belgium for the years 1914-1921 is assumed to be constant at a rate calculated on basis of the value of the WPI index in 1913 and 1921. (9) The annual rate of WPI inflation in Belgium for the years 1941-1946 is assumed to be constant at a rate calculated on basis of the value of the WPI index in 1940 and 1946. (10) The Belgian WPI excludes VAT with effect from 1971. (11) The Netherlands 1876-1901: Consumer price inflation. (12) The Danish WPI excludes indirect taxes with effect from 1962. (13) Denmark 1876: Annual increase in private consumption deflator.

Historical real effective krone rate index based on wholesale prices (HNEKRWPI)

The Historical Real Effective Krone Rate index based on Wholesale Price Indices (HREKRWPI) is calculated as follows:

$$\text{HREKRWPI}_t = \frac{\text{HNEKR}_t \cdot \text{WPI}_t^{\text{Denmark}}}{\text{WPI}_t^{\text{Abroad}}}$$

where HNEKR_t is the Historical Nominal Effective Krone Rate index in year t , $\text{WPI}_t^{\text{Denmark}}$ is the Wholesale Price Index for Denmark in year t and $\text{WPI}_t^{\text{Abroad}}$ is the Wholesale Price Index for Denmark's main trading partners in year t calculated as a geometrically weighted chain index with current weights based on annual trade statistics. The relative change in the $\text{WPI}_t^{\text{Abroad}}$ index is given by:

$$\frac{\text{WPI}_t^{\text{Abroad}}}{\text{WPI}_{t-1}^{\text{Abroad}}} = \prod_{i=1}^n \left(\frac{\text{WPI}_t^i}{\text{WPI}_{t-1}^i} \right)^{w_{t-1}^i} \quad \text{where} \quad \sum_{i=1}^n w_{t-1}^i = 1$$

where WPI_t^i is the Wholesale Price Index for country i in year t and w_{t-1}^i is the weight used for the change in the Wholesale Price Index for country i from year $t-1$ to year t based on the sum of the Danish bilateral imports and exports of goods in year $t-1$ vis-à-vis country i relative to the total Danish imports and exports of goods vis-à-vis the previously mentioned 15

countries. Changes in the WPI_t^{Abroad} index from 1875 to 1876 is thus weighted with trade weights reflecting the trade composition in year 1875 etc.

An increase in the HREKRWPI index describes an overall real appreciation of the krone vis-à-vis the currencies of Denmark's main trading partners.

Comments:

(1) Japan and Switzerland are included in the calculations with effect from 1914. (2) Finland is included in the calculations with effect from 1920.

Danish export unit values, import unit values and terms of trade (TOT)

Sources:

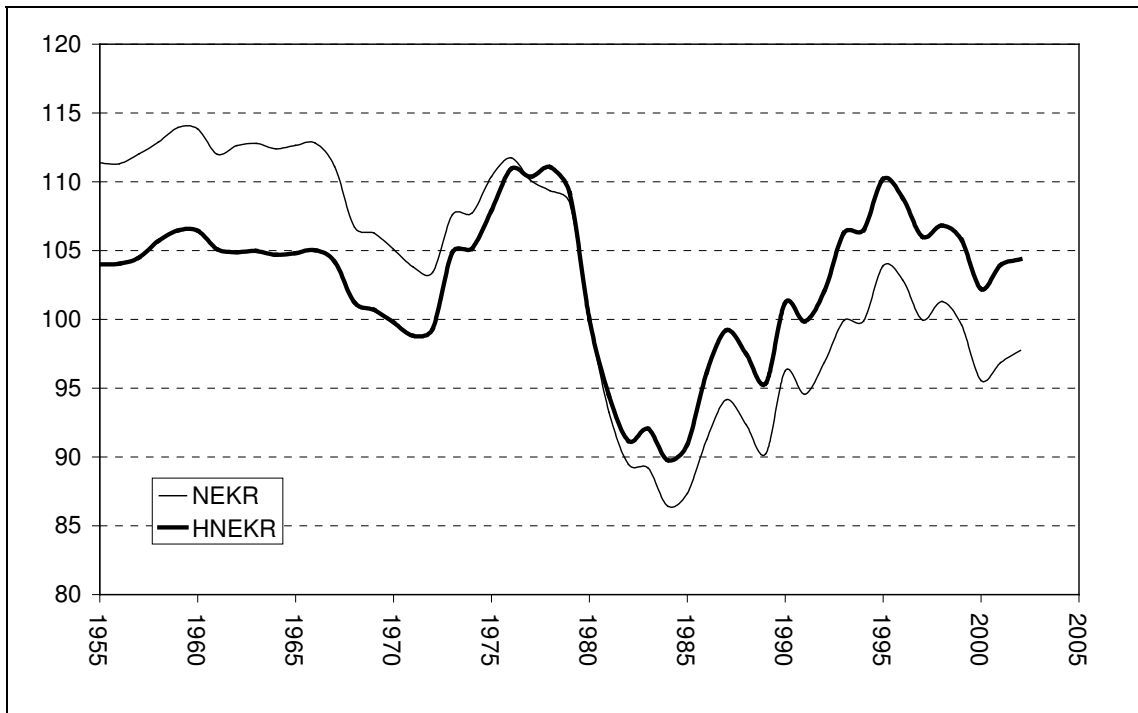

Various issues of: Statistics Denmark, *Statistical ten-year review*. Other sources: Henriksen, O. B. & Ølgaard, A., *Danmarks Udenrigshandel 1874-1958*, Studie nr. 2 fra Københavns Universitets Økonomiske Institut, Copenhagen: GADs Forlag 1960; Statistics Denmark, *Indeksberegninger i Danmarks Statistik*, Copenhagen: Statistics Denmark 1985. Statistics Denmark, *50-year review*, 2nd Edition, Copenhagen: Statistics Denmark 2001; Ølgaard, A., The Danish Terms of Trade in Foreign Trade 1875-1963, Chapter 12 in: Ølgaard, A., *Growth, Productivity and Relative Prices*, Studie nr. 10 fra Københavns Universitets Økonomiske Institut, Copenhagen: GADs Forlag 1965.

Comments:

(1) Covers the main part of Denmark's total foreign trade in goods after 1934. Before 1934 the export and import unit value index covers around 70 and 50 per cent respectively of the total foreign trade. (2) The terms-of-trade index (TOT) is calculated as the index for export unit values divided by the index for import unit values. An increase in the TOT index thus describes an overall real appreciation of the krone vis-à-vis the currencies of Denmark's trading partners.
