## **Farm Level Projections of the Impacts of Payment Limitations: Revised**

**AFPC Briefing Paper 03-2**

**June 2003**

### **AFPC Briefing Series**

The briefing series is designed to facilitate presentation by AFPC related to requests for specific policy impact analyses. The materials included in this package are intended only as visual support for an oral presentation. The user is cautioned against drawing extraneous conclusions from the material. In most AFPC welcomes comments and discussions of these results and their implications. Address such comments to:

Agricultural and Food Policy Center  
Department of Agricultural Economics  
2124 TAMUS  
Texas A&M University  
College Station, TX 77843-2124

or call 979-845-5913.

# Assumptions for Analysis

---

- Continuation of 2002 Farm Bill through 2007
- FAPRI January 2003 Baseline provides:
  - ✓ Average annual prices
  - ✓ Inflation rates for purchased inputs and land
  - ✓ Interest rates
- Historical yield and price risks used to incorporate risk.
- Farms assumed to borrow all operating capital.
- Initial machinery and real estate set at 20% for all farms.

# Probability of Representative Feed Grain Farms Exceeding CCP, DP, and LDP Limits Assuming One or Three Entity Rule for 2003-2007.

Farm Name	One Entity Rule			Three Entity Rule

# Summary and Conclusions

---

- Across all farms, reducing number of eligible limits per operation impacts:
  - ✓ Feed grain and wheat farms
    - DP limits most restrictive
    - LDP limit affects more farms
  - ✓ Cotton and rice farms
    - All three types limiting, LDP slightly lower probability than DP and CCP, but affects almost all farms
- Current entity structures on the majority of AFPC representative farms do not restrict payments for CCP and DP
- Counting certificate redemption toward LDP limit would adversely impact 11 of 16 rice farms, 7 cotton farms, and 1 feed grain farm
- Additional analysis indicates (see handout):
  - ✓ Cotton and rice representative farms could benefit marginally from shifting cash rental arrangements to share rents
- When it matters, it matters a lot in terms of increased chances of deficits and loss in annual net cash income

# Definition of Output Variables

---

- **Probability of Cash Flow Deficits** – chance that net cash farm income is less than family living, taxes, principal payments, and machinery replacement costs.
- **Probability of Losing Real Net Worth** – chance that net worth, adjusted for inflation, is less than net worth at the end of 2001.
- **Net Cash Farm Income** – cash receipts minus cash expenses
