EXECUTIVE SUMMARY

The Agricultural and Food Policy Center (AFPC) at Texas A&M University develops and maintains data to simulate 98 representative crop, dairy, and livestock operations in major production areas in 28 states. The chief purpose of this analysis is to project those farms' economic viability by region and commodity for 2008 through 2013. The data necessary to simulate the economic activity of these operations is developed through ongoing cooperation with panels of agricultural producers in selected states. The Food and Agricultural Policy Research Institute (FAPRI) provided projected prices, policy variables, and input inflation rates in their January 2008 Baseline.

Under the January 2008 Baseline, 33 of the 64 crop farms are considered in good liquidity condition (less than a 25 percent chance of negative ending cash in 2013). Nine crop farms have between a 25 percent and a 50 percent likelihood of negative ending cash. The remaining 22 crop farms have greater than a 50 percent chance of negative ending cash. Additionally, 42 of the 64 crop farms are considered in good equity position (less than a 25 percent chance of decreasing real net worth during the study period). Nine crop farms have between a 25 percent and 50 percent likelihood of losing real net worth, and 13 crop farms have greater than a 50 percent probability of decreasing real net worth. The following discussion provides an overall evaluation by commodity considering both liquidity and equity measures.

- **FEEDGRAIN FARMS:** Sixteen of the 19 feedgrain farms are in good overall financial condition. Two are classified in marginal condition, and one is in poor condition.
- **WHEAT FARMS:** Ten of the 11 wheat farms are classified in good financial condition, one is marginal, and none are in poor condition.
- **COTTON FARMS:** Five of the 20 cotton farms are classified in good condition, seven are in marginal condition, and eight are in poor condition. Also, seven of these farms have more than a 50 percent chance of losing real net worth by 2013.
- **RICE FARMS:** Three of the 14 rice farms are in good condition, three are classified in marginal condition, and eight farms are projected to be in poor financial condition through 2013.
- **DAIRY FARMS:** Eighteen of the 22 dairy farms are in good overall financial condition. Two are considered to be in marginal condition, and two are in poor condition.
- **BEEF CATTLE RANCHES:** Two of the 12 cattle ranches are classified in good financial condition, eight are classified in marginal condition, and two are projected to be in poor condition.

REPRESENTATIVE FARMS ECONOMIC OUTLOOK FOR THE JANUARY 2008 FAPRI/AFPC BASELINE

The farm level economic impacts of the Farm Security and Rural Investment Act of 2002 on representative crop and livestock operations are projected in this report. The analysis was conducted over the 2006-2013 planning horizon using FLIPSIM, AFPC's whole farm simulation model. Data to simulate farming operations in the nation's major production regions came from two sources:

- Producer panel cooperation to develop economic information to describe and simulate representative crop, livestock, and dairy farms.
- Projected prices, policy variables, and input inflation rates from the Food and Agricultural Policy Research Institute (FAPRI) January 2008 Baseline.

The FLIPSIM policy simulation model incorporates the historical risk faced by farmers for prices and production. This report presents the results of the January 2008 Baseline in a risk context using selected simulated probabilities and ranges for annual net cash farm income values. The probability of a farm experiencing negative ending cash reserves and the probability of a farm losing real net worth are included as indicators of the cash flow and equity risks facing farms through the year 2013.

DEFINITIONS OF VARIABLES IN THE SUMMARY TABLES

- **Overall Financial Position, 2008-2013** -- As a means of summarizing the representative farms' economic efficiency, liquidity, and solvency position, AFPC classifies each farm as being in either a good (green), marginal (yellow) or poor (red) position. AFPC defines a farm is in a good financial position when it has less than a 25 percent chance each of a negative ending cash position and less than a 25 percent chance of losing real net worth. If the probabilities of these events are between 25 and 50 percent the farm is classified as marginal. A probability greater than 50 percent places the farm in a poor financial position.
- **Receipts** -- 2008-2013 average of cash receipts from all farm related sources, including market sales, CCP and direct payments, marketing loan gains/LDPs, crop insurance indemnities, and other receipts.
- **Payments** -- 2008-2013 average of annual counter cyclical payments, direct payments, and marketing loan gains/LDPs for crops and the MILC program payment for dairy farms.
- **NCFI** -- 2008-2013 average net cash farm income equals average total receipts minus average total cash expenses.
- **Reserve 2013** -- equals total cash on hand at the end of year 2013. Ending cash equals beginning cash reserves plus net cash farm income and interest earned on cash reserves less principal payments, federal taxes (income and self employment), state income taxes, family living withdrawals, and actual machinery replacement costs (not depreciation).
- **Net Worth 2013** -- equity equals total assets including land minus total debt from all sources and is reported at the end of 2013.
- **CRNW** -- annualized percentage change in the operator's net worth from January 1, 2008 through December 31, 2013, after adjusting for inflation.

Representative Farm: Feed Grains

- Overall, sixteen feed grain farms are characterized as good, two are marginal, and one is in poor condition.
- Two of nineteen farms will be under severe cash flow stress; however, none of the farms have a high probability of losing real wealth.

Characteristics of Panel Farms Producing Feed Grains, 2007.

1 Viability is classified as good (green), moderate (yellow), and poor (red) based on the probabilities:

<25

25-50

>50

2 P(Negative Ending Cash) is the probability that the farm will have a cash flow deficit. Reported values represent the probabilities for 2008 and 2013.

3 P(Real Net Worth Decline) is the probability that the farm will have a loss in real net worth relative to the beginning net worth. Reported values represent the probabilities for losing real net worth from 2006 to 2008 and from 2006 to 2013.

Implications of the January 2008 FAPRI Baseline on the Economic Viability of Representative Farms Primarily Producing Feed Grains and Oilseeds

1 Receipts are average annual total cash receipts including government payments, 2008-2013 (\$1,000)

2 Payments are average annual total government payments, 2008-2013 (\$1,000)

3 NCFI is average annual net cash farm income, 2008-2013 (\$1,000)

4 Reserve 2013 is average ending cash reserves, 2013 (\$1,000)

5 Net Worth 2013 is average nominal ending net worth, 2013 (\$1,000)

6 CRNW is average percentage change in real net worth over 2008-2013 period, (%)

Representative Farm: Wheat

- Ten wheat farms are projected to be in good overall financial condition. One farm is expected to be in marginal condition, and none are in poor condition.
- Only one of the eleven wheat farms will feel moderate liquidity pressure over the period.
- None of the wheat farms have a 25 percent or greater chance of losing real equity.

Characteristics of Panel Farms Producing Wheat, 2007.

1 Receipts are average annual total cash receipts including government payments, 2008-2013 (\$1,000)

2 Payments are average annual total government payments, 2008-2013 (\$1,000)

3 NCFI is average annual net cash farm income, 2008-2013 (\$1,000)

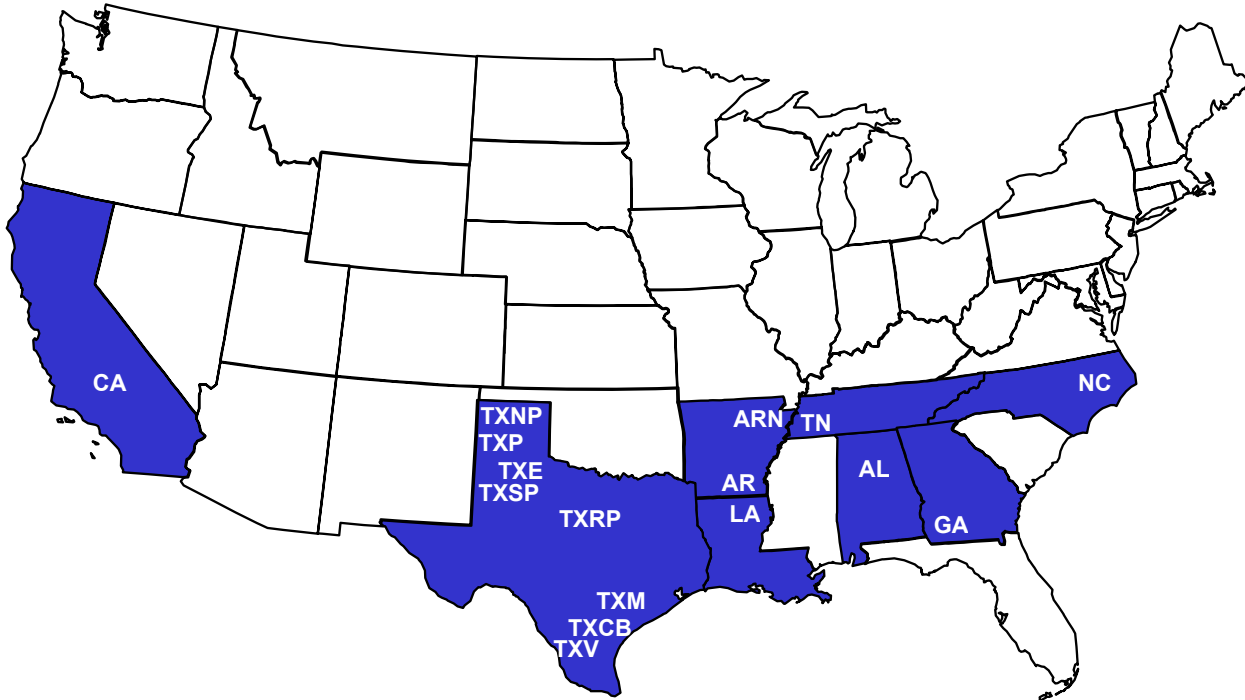

4 Reserve 2013 is average ending cash reserves, 2013 (\$1,000)

5 Net Worth 2013 is average nominal ending net worth, 2013 (\$1,000)

6 CRNW is average percentage change in real net worth over 2008-2013 period, (%)

Representative Farm: Cotton

- Five of the twenty cotton farms are characterized in good overall financial condition, seven farms are in marginal condition, and eight are in poor condition.
- Eleven of the farms are projected to experience severe cash flow problems over the period.
- Seven of the twenty cotton farms have more than a 50 percent chance of losing real equity.

Characteristics of Panel Farms Producing Cotton, 2007.

1 Viability is classified as good (green), moderate (yellow), and poor (red) based on the probabilities:

<25

25-50

>50

2 P(Negative Ending Cash) is the probability that the farm will have a cash flow deficit. Reported values represent the probabilities for 2008 and 2013.

3 P(Real Net Worth Decline) is the probability that the farm will have a loss in real net worth relative to the beginning net worth. Reported values represent the probabilities for losing real net worth from 2006 to 2008 and from 2006 to 2013.

Implications of the January 2008 FAPRI Baseline on the Economic Viability of Representative Farms Primarily Producing Cotton

1 Receipts are average annual total cash receipts including government payments, 2008-2013 (\$1,000)

2 Payments are average annual total government payments, 2008-2013 (\$1,000)

3 NCFI is average annual net cash farm income, 2008-2013 (\$1,000)

4 Reserve 2013 is average ending cash reserves, 2013 (\$1,000)

5 Net Worth 2013 is average nominal ending net worth, 2013 (\$1,000)

6 CRNW is average percentage change in real net worth over 2008-2013 period, (%)

Representative Farm: Cow/Calf

- Two of twelve cow-calf operations are projected to be in good overall financial condition. Eight ranches are expected to be in marginal condition, and two are in poor condition.
- Eight of the operations will face significant liquidity pressure over the period, as their likelihoods of experiencing negative ending cash exceed 50 percent.
- Only one of the operations is projected to face a severe threat of losing real equity over the period.

Characteristics of Panel Farms Producing Beef Cattle, 2007.

	Cropland (acres)	Assets (\$1,000)	Debt/Asset (ratio)	Gross Receipts (\$1,000)	Cows (number)

Economic Viability of Representative Farms over the 2008-2013 Period

Farm Name	Overall Ranking		P(Negative Ending Cash)	P(Real Net Worth Declines)
	2008	2013	2008-2013	2008-2013
2/8/2				
CAB500			99-99	1-99
NVB700			71-99	1-6
MTB500			1-67	1-1
WYB335			99-99	1-28
COB250			1-59	1-1
NMB240			99-99	1-1
SDB450			1-32	1-1
MOB250			1-1	1-1
MOCB400			1-30	1-1
TXRB500			1-1	1-1
TXSB175			99-99	1-1
FLB1155			1-84	1-1

1 Viability is classified as good (green), moderate (yellow), and poor (red) based on the probabilities:

<25

25-50

>50

2 P(NegativeEnding Cash) is the probability that the farm will have a cash flow deficit. Reported values represent the probabilities for 2008 and 2013.

3 P(Real Net Worth Decline) is the probability that the farm will have a loss in real net worth relative to the beginning net worth. Reported values represent the probabilities for losing real net worth from 2006 to 2008 and from 2006 to 2013.

Implications of the January 2008 FAPRI Baseline on the Economic Viability of Representative Farms Primarily Producing Beef Cattle

AFPC Briefing Series

The briefing series is designed to facilitate presentation by AFPC related to requests for specific policy impact analyses. The materials included in this package are intended only as visual support for an oral presentation. The user is cautioned against drawing extraneous conclusions from the material. In most instances, the briefing series will be followed by an AFPC Working Paper. AFPC welcomes comments and discussions of these results and their implications. Address such comments to:

Agricultural and Food Policy Center
Department of Agricultural Economics
Texas A&M University
College Station, TX 77843-2124

or call 979-845-5913.
